Mazda6 Workshop Manual Supplement

FOREWORD

This manual contains on-vehicle service and diagnosis for the Mazda6.

For proper repair and maintenance, a thorough familiarization with this manual is important, and it should always be kept in a handy place for quick and easy reference.

All the contents of this manual, including drawings and specifications, are the latest available at the time of printing. As modifications affecting repair or maintenance occur, relevant information supplementary to this volume will be made available at Mazda dealers. This manual should be kept up-to-date.

Mazda Motor Corporation reserves the right to alter the specifications and contents of this manual without obligation or advance notice.

All rights reserved. No part of this book may be reproduced or used in any form or by any means, electronic or mechanical—including photocopying and recording and the use of any kind of information storage and retrieval system—without permission in writing.

Mazda Motor Corporation HIROSHIMA, JAPAN

APPLICATION:

This manual is applicable to vehicles beginning with the Vehicle Identification Numbers (VIN), and related materials shown on the following page.

WARNING

Servicing a vehicle can be dangerous. If you have not received service-related training, the risks of injury, property damage, and failure of servicing increase. The recommended servicing procedures for the vehicle in this workshop manual were developed with Mazda-trained technicians in mind. This manual may be useful to non-Mazda trained technicians, but a technician with our service-related training and experience will be at less risk when performing service operations. However, all users of this manual are expected to at least know general safety procedures.

This manual contains "Warnings" and "Cautions" applicable to risks not normally encountered in a general technician's experience. They should be followed to reduce the risk of injury and the risk that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that the "Warnings" and "Cautions" are not exhaustive. It is impossible to warn of all the hazardous consequences that might result from failure to follow the procedures.

The procedures recommended and described in this manual are effective methods of performing service and repair. Some require tools specifically designed for a specific purpose. Persons using procedures and tools which are not recommended by Mazda Motor Corporation must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

The contents of this manual, including drawings and specifications, are the latest available at the time of printing, and Mazda Motor Corporation reserves the right to change the vehicle designs and alter the contents of this manual without notice and without incurring obligation.

Parts should be replaced with genuine Mazda replacement parts or with parts which match the quality of genuine Mazda replacement parts. Persons using replacement parts of lesser quality than that of genuine Mazda replacement parts must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

Mazda Motor Corporation is not responsible for any problems which may arise from the use of this manual. The cause of such problems includes but is not limited to insufficient service-related training, use of improper tools, use of replacement parts of lesser quality than that of genuine Mazda replacement parts, or not being aware of any revision of this manual.

SCHEDULED MAINTENANCE

SCHEDULED MAINTENANCE TABLE

For Europe (L.H.D. U.K.)

Chart symbols:

- I : Inspect and clean, repair, adjust, or replace if necessary.
- R : Replace

C: Clean

Remarks:

- The ignition and fuel systems are highly important to the emission control system and to efficient engine operation. All inspections and adjustments must be made by an expert repairer, we recommend an Authorized Mazda Repairer.
- After the described period, continue to follow the described maintenance at the recommended intervals.
- · Refer below for a description of items marked* in the maintenance chart.
 - *1: If the vehicle is operated under any of the following conditions, change the engine oil and oil filter every 10,000 km (6,250 miles) or shorter.
 - a. Driving in dusty conditions.
 - b. Extended periods of idling or low speed operation.
 - c. Driving for long period in cold temperatures or driving regularly at short distance only.
 - *2: Also inspect and adjust the power steering and air conditioner drive belts, if installed.
 - *3: If the brakes are used extensively (for example, continuous hard driving or mountain driving) or if the vehicle is operated in extremely humid climates, change the brake fluid annually.
 - *4: If the vehicle is operated in very dusty or sandy areas, clean and if necessary, replace the air cleaner element more often than the recommended intervals.
 - *5: Replacement of the timing belt is required at every 100,000 km (62,500 miles). Failure to replace the timing belt may result in damage to the engine.
 - *6: Replacement of the timing belt is required at every 120,000 km (75,000 miles). Failure to replace the timing belt may result in damage to the engine.
 - *7: If the vehicle is operated under any of the following conditions, change the rear differential oil every 45,000 km (27,000 miles).
 - a. Towing a trailer or using a car top carrier
 - b. Driving in dusty, sandy or wet condition
 - c. Extended periods of idling or low speed operation
 - d. Repeated short trips of less than 16 km (10 miles)
 - *8: If this component has been submerged in water, the oil should be changed.

SCHEDULED MAINTENANCE

Scheduled Maintenance Service (Specific Work Required)

The specific work required for each maintenance item is listed in the following table. (Please refer to the section applicable to the model serviced.)
 For Europe (L.H.D. U.K.)

Bold frames: New item

Maintenance Item	Specific Work Required
ENGINE	
Engine valve clearance	Measure clearance
Drive belts	Inspect for wear, cracks and fraying, and check tension. Replace drive belt.
Engine timing belt	Replace engine timing belt.
Engine oil	Replace engine oil and inspect for leakage.
Oil filter	Replace oil filter and inspect for leakage.
COOLING SYSTEM	
Cooling system (including coolant level adjustment)	Check coolant level and quality, and inspect for leakage.
Engine coolant	Replace coolant.
FUEL SYSTEM	
Air cleaner element	Inspect for dirt, oil and damage. Clean air cleaner element (by blowing air). Replace air cleaner element.
Fuel filter	Replace fuel filter.
Fuel lines & hoses	Inspect for cracks, leakage and loose connection.
Fuel injection system (for MZR-CD (RF Turbo))	Update to injection amount correction with WDS. (see W/M)
IGNITION SYSTEM (FOR GASOLINE)	
Spark plugs	Inspect for wear, damage, carbon, high-tension lead condition and measure plug gap. Replace spark plugs.
EMISSION CONTROL SYSTEM	
Evaporative system (for gasoline)	Check system operation (see W/M), vapor lines, vacuum fitting hoses and connection.
E.G.R. system (MZR-CR (RF Turbo))	Check system operation (see W/M), vacuum fitting hoses and connection. Update to MAF correction for E.G.R control with WDS. (see W/M)

SCHEDULED MAINTENANCE

Maintenance Item	Specific Work Required
ELECTRICAL SYSTEM	
Battery electrolyte level & specific gravity	Check level and specific gravity.
CHASSIS & BODY	
Brake fluid	Check fluid level and inspect for leakage. Replace brake fluid.
Brake lines, hoses & connections	Inspect for cracks, damage, chafing, corrosion, scars, swelling and fluid leakage.
Parking brake	Check lever stroke.
Power brake unit & hoses	Check vacuum lines, connections and check valve for improper attachment, air tightness, cracks chafing and deterioration.
Disc brakes	Test for judder and noise. Inspect caliper for correct operation and fluid leakage, brake pads for wear. Check disc plate condition and thickness.
Power steering fluid & lines	Check fluid level and lines for improper attachment, leakage, cracks, damage, loose connections, chafing and deterioration.
Power steering fluid	Check fluid level.
Power steering system & hoses	Check lines for improper attachment, leakage, cracks, damage, loose connections, chafing and deterioration.
Steering operation & gear housing	Check that the steering wheel has the specified play. Be sure to check for changes, such as excessive play, hard steering or strange noises. Check gear housing and boots for looseness, damage and grease/gear oil leakage.
Steering linkages tie rod ends & arms	Check ball joint, dust cover and other components for looseness, wear, damage and grease leakage.
Front & rear suspension ball joints	Inspect for grease leakage, cracks, damage and looseness.
Manual transmission/transaxle oil	Check oil level and inspect for leakage. Replace manual transmission/transaxle oil.
Automatic transmission/transaxle fluid level	Check fluid level.
Rear differential oil	Check oil level and inspect for leakage. Replace rear differential oil.
Transfer oil (for 4×4)	Check oil level and inspect for leakage. Replace transfer oil.
Drive shaft dust boots	Inspect for grease leakage, cracks, damage and looseness.
Body condition (for rust, corrosion & perforation)	Inspect body surface for paint damage, rust, corrosion and perforation.
Exhaust system and heat shields	Inspect for damage, corrosion, looseness of connections and gas leakage.
Tires (including spare tire) (with inflation pressure adjustment)	Check air pressure and inspect tires for tread wear, damage and cracks; and wheels for damage and corrosion.
AIR CONDITIONER SYSTEM (IF EQUIPPED	
Cabin air filter	Replace cabin air filter.

OUTLINE

OUTLINE OF CONSTRUCTION

 The fuel and emission control system is essentially carried over from that of the previous Mazda6 (GG, GY) MZR-CD (RF Turbo) engine models, except for the following features. (See Mazda6 Workshop Manual Supplement 1749-1*-02G.)

FEATURES

Improved Emission Performance

• A EGR valve position sensor has been adopted.

Improved Serviceability

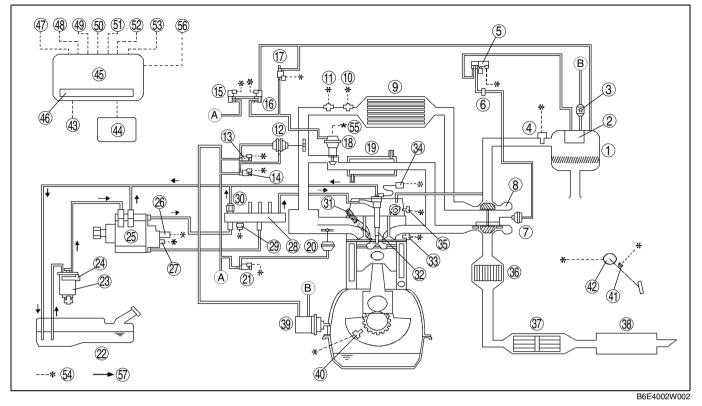

- The number of DTCs has been increased to provide more detail information.
- The DTC troubleshooting procedures have been renewed due to the adoption of the diagnostic test mode and OBD drive mode.
- The PID item has been added.
- The simulation item has been added.

CONTROL SYSTEM OUTLINE

The control system is essentially carried over from that of the previous Mazda6 (GG, GY) MZR-CD (RF Turbo) engine models. (See Mazda6 Workshop Manual Supplement 1749-1*-02G.)

DIAGNOSTIC TEST MODE

• To meet EOBD regulations, the following diagnostic test modes have been adopted.

Diagnostic test mode	Item
Mode 01	Sending diagnostic data (PID data monitor/On-board system readiness test)
Mode 02	Sending freeze frame data
Mode 03	Sending emission-related malfunction code (DTC)
Mode 04	Clearing/resetting emission-related malfunction information
Mode 07	Sending continuous monitoring system test results (pending code)
Mode 09	Request vehicle information

Sending Diagnostic Data PID data monitor

• The PID data monitor items are shown below.

PID data monitor table

-: Not applicable

F2

Full names	Uni	Unit	
Monitor status since DTCs cleared	_		
Calculated LOAD value	%		
Engine coolant temperature	۵°	°F	
Intake manifold absolute pressure	kPa	l	
Engine speed	rpm	l	
Vehicle speed	km/h	mph	
Intake air temperature	C°	°F	
Air flow rate from mass air flow sensor	g/s	g/s	
OBD requirement according to vehicle design	_	_	
Distance travelled while MIL is activated	km	km miles	
Fuel rail pressure	kPa	kPa	

Sending Freeze Frame Data

• The Freeze Frame Data monitor items are shown below.

Freeze Frame Data monitor table

		—: Not applicable
Full names	Unit	
DTC that caused required Freeze Frame Data storage	_	
Calculated LOAD value	%	
Engine coolant temperature	°C	°F
Intake manifold absolute pressure	kPa	
Engine speed	rpm	
Vehicle speed	km/h	mph
Intake air temperature	°C	°F
Air flow rate from mass air flow sensor	g/s	
Fuel rail pressure	kPa	

Sending Emission-related Malfunction Code

• The DTCs are shown below.

DTC Table							
DTC No.	Condition	MIL	DC	Memory function			
P0016	Crankshaft position-camshaft position correlation malfunction	OFF	2	×

P2229	BARO sensor circuit high input	ON	1	×

Sending Continuous Monitoring System Test Results

• These appear when a problem is detected in a monitored system.

1-drive cycle type

- If any problems are detected in the first drive cycle, pending codes will be stored in the PCM memory, as well as DTCs.
- After pending codes are stored, if the PCM determines that the system is normal in any future drive cycle, the PCM deletes the pending codes.

2-drive cycle type

- The code for a failed system is stored in the PCM memory in the first drive cycle. If the problem is not found in the second drive cycle, the PCM determines that the system returned to normal or the problem was mistakenly detected, and deletes the pending code. If the problem is found in the second drive cycle too, the PCM determines that the system has failed, and stores the pending codes, and the DTCs.
- After pending codes are stored, if the PCM determines that the system is normal in any future drive cycle, the PCM deletes the pending codes.

DTC DETECTION LOGIC AND CONDITIONS

B6E407000102103

- P0016 Crankshaft position-camshaft position correlation malfunction
- The PCM monitors the input signals from the CKP sensor and CMP sensor while engine is running. If the input signals from the CKP sensor and the CMP sensor do not correspond, the PCM determines that there is a correlation malfunction between crankshaft and camshaft position.

P0045 Variable boost control (VBC) solenoid valve control circuit low input

• The PCM monitors the output signal when the PCM controls the variable boost control solenoid valve **between 30 and 70%**. If the current of the variable boost control solenoid valve is **less than 0.8 A** during variable boost control solenoid valve control, the PCM determines that there is a malfunction in the variable boost control solenoid valve control circuit.

P0088 Fuel pressure system too high

 The PCM monitors the fuel pressure in the common rail from the fuel pressure sensor while the engine running. If the fuel pressure is more than 188 MPa {1,917 kgf/cm², 27,267 psi}, the PCM determines that the fuel pressure is too high.

P0093 Fuel system leak detection

• The PCM monitors the fuel pressure in the common rail from the fuel pressure sensor while the engine running. If the fuel pressure is lower after the fuel injection than the preprogrammed criteria, the PCM determines fuel system leakage.

P0096 Intake air temperature (IAT) sensor No.2 range/performance problem

The PCM monitors the input signal from intake air temperature sensor No.2. If the difference between the
maximum and minimum value of the intake air temperature sensor No.2 is less than 1 °C {1.8 °F}, the PCM
determines that there is a malfunction in intake air temperature sensor No.2.

P0097 Intake air temperature (IAT) sensor No.2 circuit low input

• The PCM monitors the input signal from intake air temperature sensor No.2. If the voltage from intake air temperature sensor No.2 is **less than 0.14 V**, the PCM determines that there is a malfunction in the intake air temperature sensor No.2 circuit.

P0098 Intake air temperature (IAT) sensor No.2 circuit high input

• The PCM monitors the input signal from intake air temperature sensor No.2. If the voltage from intake air temperature sensor No.2 is **more than 4.92 V**, the PCM determines that there is a malfunction in the intake air temperature sensor No.2 circuit.

P0101 Mass air flow (MAF) sensor range/performance problem

• The PCM monitors the input signal from the mass air flow sensor when the engine speed is **between 600 rpm** and **2,100 rpm**. If the voltage characteristic of the air flow sensor signal is out of the threshold, the PCM determines that there is a malfunction in the mass air flow sensor.

P0102 Mass air flow (MAF) sensor circuit low input

 The PCM monitors the input signal from the air flow sensor. If the voltage from the air flow sensor is less than 0.15 V, the PCM determines that there is a malfunction in the air flow sensor circuit.

P0103 Mass air flow (MAF) sensor circuit high input

• The PCM monitors the input signal from the air flow sensor. If the voltage from the air flow sensor is **more than 4.9 V**, the PCM determines that there is a malfunction in the intake air temperature sensor No. 2 circuit.

P0106 Boost sensor range/performance problem

• The PCM monitors the vacuum inside the intake manifold. If the difference of the vacuum inside the intake manifold during middle engine speed and low engine speed is less than the threshold, the PCM determines that there is a malfunction in the manifold absolute pressure sensor characteristic.

P0107 Boost sensor circuit low input

• The PCM monitors the input signal from the manifold absolute pressure. If the voltage from the manifold absolute pressure sensor is **less than 0.4 V**, the PCM determines that there is a malfunction in the manifold absolute pressure sensor circuit.

P0108 Boost sensor circuit high input

• The PCM monitors the input signal from the manifold absolute pressure sensor. If the voltage from the manifold absolute pressure sensor is **more than 4.8 V**, the PCM determines that there is a malfunction in the manifold absolute pressure sensor circuit.

P0111 Intake air temperature (IAT) sensor No.1 range/performance problem

• The PCM monitors the input signal from intake air temperature sensor No.1. If the difference between the maximum and minimum value of the intake air temperature sensor No.1 is **less than 1** °C **{1.8** °F}, the PCM determines that there is a malfunction in intake air temperature sensor No.1.

P0112 Intake air temperature (IAT) sensor No.1 circuit low input

• The PCM monitors the input signal from intake air temperature sensor No.1. If the voltage from intake air temperature sensor No.1 is **less than 0.14 V**, the PCM determines that there is a malfunction in the intake air temperature sensor No.1 circuit.

P0113 Intake air temperature (IAT) sensor No.1 circuit high input

• The PCM monitors the input signal from intake air temperature sensor No.1. If the voltage from intake air temperature sensor No.1 is **more than 4.92 V**, the PCM determines that there is a malfunction in the intake air temperature sensor No.1 circuit.

P0116 Engine coolant temperature (ECT) sensor range/performance problem

• The PCM monitors the input signal from the engine coolant temperature sensor. If the difference between the maximum and minimum value of the engine coolant temperature is **less than 3 °C {5.4 °F}**, the PCM determines that there is a malfunction in the engine coolant temperature sensor characteristic.

P0117 Engine coolant temperature (ECT) sensor circuit low input

• The PCM monitors the input signal from the engine coolant temperature sensor. If the voltage from the engine coolant temperature sensor is **less than 0.14 V**, the PCM determines that there is a malfunction in the engine coolant temperature sensor circuit.

P0118 Engine coolant temperature (ECT) sensor circuit high input

• The PCM monitors the input signal from the engine coolant temperature sensor. If the voltage from the engine coolant temperature sensor is **more than 4.92 V**, the PCM determines that there is a malfunction in the engine

coolant temperature sensor circuit.

P0122 Accelerator pedal position (APP) sensor No.1 circuit low input

- The PCM monitors the input signal from accelerator pedal position sensor No.1. If the voltage from accelerator pedal position sensor No.1 is **less than 0.3 V**, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.1 circuit.
- P0123 Accelerator pedal position (APP) sensor No.1 circuit high input
- The PCM monitors the input signal from accelerator pedal position sensor No.1. If the voltage from accelerator pedal position sensor No.1 is **more than 4.7 V**, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.1 circuit.

P0182 Fuel temperature sensor circuit low input

• The PCM monitors the input signal from the fuel temperature sensor. If the voltage from the fuel temperature sensor is **less than 0.14 V**, the PCM determines that there is a malfunction in the fuel temperature sensor circuit.

P0183 Fuel temperature sensor circuit high input

• The PCM monitors the input signal from the fuel temperature sensor. If the voltage from the fuel temperature sensor is **more than 4.92 V**, the PCM determines that there is a malfunction in the fuel temperature sensor circuit.

P0191 Fuel pressure sensor range/performance problem

- The PCM monitors the fuel pressure in the common rail and input signal from the fuel pressure sensor while the engine is running. If any one of the following conditions is met, the PCM determines that there is malfunction in the fuel pressure sensor range/performance problem.
 - The PCM calculates the difference between the actual fuel pressure and the target fuel pressure. If the
 pressure difference more than 2 MPa {20 kgf/cm², 290 psi}, the PCM determines that there is a
 malfunction in fuel pressure sensor range/performance problem.
 - The PCM monitors the input signal from fuel pressure sensor. If the difference between the maximum and minimum value of the fuel pressure sensor is less than 0.015 V, the PCM determines that there is a malfunction in fuel pressure sensor range/performance problem.

P0192 Fuel pressure sensor circuit low input

• PCM monitors input voltage from fuel pressure sensor while engine is running. If input voltage from fuel pressure sensor is **less than 0.4 V**, PCM determines fuel pressure sensor circuit low input.

P0193 Fuel pressure sensor circuit high input

- PCM monitors input voltage from fuel pressure sensor while engine is running. If input voltage from fuel pressure sensor is more than 4.86 V, PCM determines fuel pressure sensor circuit high input.
- P0200 Fuel injector operation identified
- The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for unspecified cylinder normally, the PCM determines that the unspecified cylinder fuel injector operation is not verified.

P0201 Fuel injector No.1 operation identified

• The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.1 cylinder normally, PCM determines that the fuel injector No.1 operation is not verified.

P0202 Fuel injector No.2 operation identified

• The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.2 cylinder normally, the PCM determines that the fuel injector No.2 operation is not verified.

P0203 Fuel injector No.3 operation identified

• The PCM monitors each cylinder's injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.3 cylinder normally, the PCM determines that the fuel injector No.3 operation is not verified.

P0204 Fuel injector No.4 operation identified

• The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.4 cylinder normally, the PCM determines that the fuel injector No.4 operation is not verified.

P0222 Accelerator pedal position (APP) sensor No.2 circuit low input

• The PCM monitors the input signal from accelerator pedal position sensor No.2. If the voltage from accelerator pedal position sensor No.2 is **less than 0.3 V**, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.2 circuit.

P0223 Accelerator pedal position (APP) sensor No.2 circuit high input

• The PCM monitors the input signal from accelerator pedal position sensor No.2. If the voltage from accelerator pedal position sensor No.2 is **more than 4.7 V**, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.2 circuit.

P0225 Idle switch circuit malfunction

• The PCM monitors the input signals from the accelerator pedal position sensor and the idle switch. If the idle switch is off even if the voltage from the accelerator pedal position sensor No.2 is **less than 0.75 V**, the PCM determines that there is a malfunction in the idle switch circuit.

P0301, P0302, P0303, P0304 Cylinder No.1/No.2/No.3/No.4 misfire detection

• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the deviation of the interval time for each cylinder. If the deviation of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM detects a determines that a misfire, which can affect emission performance, has occurred.

P0336 CKP sensor range/performance problem

 The PCM monitors input signal from the CKP sensor while the engine is running. If the input signal from the CKP sensor does not correspond with the proper pulse number, the PCM determines CKP sensor performance problem.

P0337 CKP sensor circuit low input

• The PCM monitors the input signal from the CKP sensor and the CMP sensor while the engine is running. If the input signal from the CKP sensor is not input while the PCM detects **28 pulses** from the CMP sensor, the PCM determines that there is a malfunction in the CKP sensor circuit.

P0341 CMP sensor range/performance problem

 The PCM monitors the input signal from the CMP sensor while the engine is running. If the input signal from the CMP sensor does not correspond with the proper pulse number, the PCM determines CMP sensor performance problem.

P0342 CMP sensor circuit low input

• The PCM monitors the input signal from the CMP sensor and the CKP sensor while the engine is running. If the input signal from the CMP sensor is not input while the PCM detects **255 pulses** from the CKP sensor, the PCM determines that there is a malfunction in the CMP sensor circuit.

P0401 EGR flow insufficient detected

• The PCM monitors the difference between the target air amount and intake air amount while the EGR system is operating. If the difference between the target air amount and the intake air amount is less than the threshold, the PCM determines that there is a malfunction in the EGR system.

P0402 EGR flow excessive detected

• The PCM monitors the difference between the target air amount and intake air amount while the EGR system is operating. If the difference between the target air amount and the intake air amount is more than the threshold, the PCM determines that there is a malfunction in the EGR system.

P0404 EGR valve stuck

• The PCM monitors the input signal from the EGR valve position sensor while the EGR system is operating. If the output voltage difference is less than threshold when the EGR flow amount changes, the PCM determines that there is a malfunction in the EGR valve.

P0406 EGR valve position sensor circuit high input

• The PCM monitors the input signal from the EGR valve position sensor. If the voltage from the EGR valve position sensor is **more than 4.75 V**, the PCM determines that there is a malfunction in the EGR valve position sensor circuit.

P0489 EGR solenoid valve (vacuum) control circuit low input

• The PCM monitors the output signal to the EGR solenoid valve (vacuum). If the EGR solenoid valve (vacuum) voltage is low even if the EGR solenoid valve (vacuum) is off, the PCM determines that there is a malfunction in the intake shutter solenoid valve control circuit.

P0490 EGR solenoid valve (vacuum) control circuit high input

The PCM monitors the output signal to the EGR solenoid valve (vacuum). If the EGR solenoid valve (vacuum) voltage is high even if the EGR solenoid valve (vacuum) is on, the PCM determines that there is a malfunction in the EGR solenoid valve (vacuum) control circuit.

P0500 Vehicle speed signal problem

• The PCM monitors the CAN input signal from the DSC HU/CM. If the input signal is not correct, the PCM determines that there is a CAN input signal.

P0504 Brake switch signal correlation malfunction

- The PCM monitors the input signal from brake switch 1 and brake switch 2 while the engine is running. The PCM determines the brake switch signal correlation malfunction if the input signal from brake switch 1 brake switch 2 is as follows:
 - Brake switch 1 is on and brake switch 2 is off.
 - Brake switch 1 is off and brake switch 2 is on.

P0512 Engine switch circuit high input

• The PCM monitors the engine speed and the starter signal. If the engine speed is **more than 700 rpm** and the starter switch ON signal is input, the PCM determines that there is a malfunction in the starter switch circuit.

P0562 Battery voltage low input

• The PCM monitors the battery voltage. If the battery voltage is **less than 8 V**, the PCM determines that there is a malfunction in the battery and the battery signal system.

P0563 Battery voltage high input

• The PCM monitors the battery voltage. If the battery voltage is **more than 16 V**, the PCM determines that there is a malfunction in the battery charging system.

P0564 Cruise control signal malfunction

- The PCM monitors the input voltage from the cruise control switch while the engine is running. PCM determines cruise control signal malfunction if the input voltage from the cruise control switch is as follows for 120 s:
 - Below 0.1 V.
 - 1.4-1.9 V. 3.7-3.9 V. 4.5-4.6 V.

P0602 PCM programming error

No configuration data in PCM

P0606 PCM malfunction

PCM does not read DTC from output devices.

P0610 Control module vehicle options error

PCM data configuration error

P0627 Suction control valve circuit open

• The PCM monitors the suction control valve operation circuit signal frequency at PCM terminal 94. If the difference between the suction control valve operation frequency at PCM terminal 93 and the monitored suction control valve operation circuit signal frequency at PCM terminal 94 exceeds the threshold, the PCM determines that suction control valve open circuit.

P0628 Suction control valve circuit low input

 The PCM monitors the suction control valve circuit current while the engine is running. If the PCM detects the circuit current is less than 1 A when the suction control valve is on, the PCM determines that there is a malfunction in the suction control valve circuit.

P0629 Suction control valve circuit high input

• The PCM monitors the suction control valve circuit current while the engine is running. If the PCM detects circuit current more than 1 A when the suction control valve is off, the PCM determines that there is am malfunction in the suction control valve circuit.

P0661 Intake shutter solenoid valve (half) circuit low input

• The PCM monitors the output signal to the intake shutter solenoid valve when the intake shutter solenoid valve is off. If the intake shutter solenoid valve voltage is less than 7.8 V when the intake shutter solenoid valve off, the PCM determines that there is a malfunction in the intake shutter solenoid valve control circuit.

P0662 Intake shutter solenoid valve (half) circuit high input

 The PCM monitors the output signal to the intake shutter solenoid valve when the intake shutter solenoid valve is on. If the intake shutter solenoid valve voltage is more than 7.8 V when the intake shutter solenoid valve on, the PCM determines that there is a malfunction in the intake shutter solenoid valve control circuit.

P0664 Intake shutter solenoid valve (full) circuit voltage low input

• The PCM monitors the output signal to the intake shutter solenoid valve. If the intake shutter solenoid valve voltage is less than 7.8 V when the intake shutter solenoid valve is on, the PCM determines that there is a malfunction in the intake shutter solenoid valve control system.

P0665 intake shutter solenoid valve (full) circuit voltage high input

• The PCM monitors the output signal to the intake shutter solenoid valve when intake shutter solenoid valve is on. If the intake shutter solenoid valve voltage is more than 7.8 V when the intake shutter solenoid valve is on, the PCM determines that there is a malfunction in the intake shutter solenoid valve control circuit.

P0704 Clutch switch circuit malfunction

• The PCM monitors input voltage from the clutch pedal position switch while the engine running. If the input voltage from the clutch pedal position switch does not change when the vehicle stops after accelerating to more than 30 km/h {18.6 mph} and decelerating to 0 km/h {0 mph}, the PCM determines that clutch pedal position switch circuit has a malfunction.

P0850 Neutral switch circuit malfunction

• The PCM monitors the input signal from the neutral switch when shifting. If the neutral switch signal is not input even once even when vehicle speed is more than 10 km/h {6.2 mph} the shift lever is operated more than five times, the PCM determines that there is a malfunction in the neutral switch circuit.

P1190 Calibration resistor circuit malfunction

The PCM monitors the input voltage from the calibration resistor. If the PCM detects that the input voltage for any cylinder is more than 4.8 V or less than 0.2 V, the PCM determines calibration resistor malfunction.

P1211 Fuel pressure higher or lower than desired pressure

- The PCM monitors the fuel pressure and calculates the fuel supply volume to the common rail using the fuel pressure sensor input signal while the engine is running. If the fuel pressure or fuel supply volume to the common rail is as follows, the PCM determines that the fuel pressure is higher or lower than the desired pressure.
 - Supply pump actual pressure is higher than threshold.
 - Difference between two consecutive fuel supply to common rail volume from supply pump is more than one fuel injection volume by fuel injector.

P1391 Glow plug circuit low input

• The PCM monitors the output signal to the glow relay when the glow relay is on. If the glow relay voltage is 1.0

V or less when the glow relay is operating, The PCM determines that there is a malfunction in the glow relay circuit.

P1392 Glow plug circuit high input

• The PCM monitors the output signal to the glow relay when the glow relay is off. If the glow relay voltage is **4.0** V or more when the glow relay is off, The PCM determines that there is a malfunction in the glow relay circuit.

- P2009 Variable swirl control (VSC) solenoid valve circuit high input
- The PCM monitors the output signal to the variable swirl control solenoid valve. If the voltage of the variable swirl control solenoid valve is on, the PCM determines that there is a malfunction in the variable swirl control solenoid valve control system.

P2010 Variable swirl control (VSC) solenoid valve circuit low input

• The PCM monitors the output signal to the variable swirl control solenoid valve. If the voltage of the variable swirl control solenoid valve is off, the PCM determines that there is a malfunction in the variable swirl control solenoid valve control system.

P2135 Accelerator pedal position (APP) sensor No.1/No.2 voltage correlation

 The PCM monitors the input signals from accelerator pedal position sensor No.1 and accelerator pedal position sensor No.2. If the difference between accelerator pedal position sensor No.1 and accelerator pedal position sensor No.2 is more than 0.9 V, the PCM determines that there is a malfunction in the accelerator pedal position sensor characteristic.

P2136 Accelerator pedal position (APP) sensor No.1/idle switch correlation

The PCM monitors the input signal from accelerator pedal position sensor No.1. If the voltage from accelerator
pedal position sensor No.1 is more than 1.25 V during idle, the PCM determines that there is a malfunction in
the accelerator pedal position sensor No.1 characteristic.

P2141 EGR solenoid valve (vent) circuit low input

The PCM monitors the output signal to the EGR solenoid valve (vent). If the EGR solenoid valve (vent) voltage
is low even if the EGR solenoid valve (vent) is off, the PCM determines that there is a malfunction in the intake
shutter solenoid valve control system.

P2142 EGR solenoid valve (vent) circuit high input

The PCM monitors the output signal to the EGR solenoid valve (vent). If the EGR solenoid valve (vent) voltage
is high even if the EGR solenoid valve (vent) is on, the PCM determines that there is a malfunction in the EGR
solenoid valve (vent) control system.

P2144 EGR control solenoid valve circuit low input

 The PCM monitors the output signal to the EGR control solenoid valve. If the EGR control solenoid valve voltage is low even if the EGR control solenoid valve is off, the PCM determines that there is a malfunction in the EGR control solenoid valve control circuit.

P2145 EGR control solenoid valve circuit high input

 The PCM monitors the output signal to the EGR control solenoid valve. If the EGR control solenoid valve voltage is high even if the EGR control solenoid valve is on, the PCM determines that there is a malfunction in the EGR control solenoid valve control circuit.

P2146 Fuel injector No.1/No.4 circuit malfunction

• The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.1 and No.4 cylinder normally, the PCM determines that the fuel injector No.1 and No.4 operation is not verified.

P2149 Fuel injector No.2/No.3 circuit malfunction

The PCM monitors each cylinder's injection confirmation signal from the IDM while the engine is running. If the
PCM does not receive the injection confirmation signal for No.2 and No.3 cylinder normally, the PCM
determines that the fuel injector No.2 and No.3 operation is not verified.

P2227 BARO sensor range/performance problem

• The PCM monitors the input signal from the barometric pressure sensor. If the difference between the barometric pressure input from the barometric pressure sensor and the manifold absolute pressure is **more than 75 mmHg**, the PCM determines that there is a malfunction in the barometric pressure sensor.

P2228 BARO sensor circuit low input

• The PCM monitors the input signal from the barometric pressure sensor. If the voltage from the barometric pressure sensor is **less than 0.4 V**, the PCM determines that there is a malfunction in the barometric pressure sensor signal system.

P2229 BARO sensor circuit high input

• The PCM monitors the input signal from the barometric pressure sensor. If the voltage from the barometric pressure sensor is **more than 4.7 V**, the PCM determines that there is a malfunction in the barometric pressure sensor signal system.

PID/DATA MONITOR AND RECORD

• The PID/DATA monitor items are shown below.

PID/DATA monitor item table

PID/DATA monitor item	Unit/Condition	Definition				
AC_REQ	On/Off	A/C request signal.				
ACCS	On/Off	Air conditioning compressor cycling switch				
ACR	On/Off	A/C relay				
APS1	V	Accelerator position sensor No.1 - voltage				
APS2	V	Accelerator position sensor No.2 - voltage				
ARPMDES	RPM	Target engine speed				
	kPa psi Bar					
BARO	V V	Barometric pressure				
BOO	On/Off	Brake switch				
BOOST_DSD	kPa psi Bar	Desired boost pressure				
CPP	On/Off	Clutch switch				
CPP/PNP	Neutral/Drive	Neutral switch				
CR_1	V	Calibration resistor voltage 1				
CR_2	V	Calibration resistor voltage 2				
CR_3	V	Calibration resistor voltage 3				
CR_4	V	Calibration resistor voltage 4				
CRUISESW	On/Off	Cruise control switch				
DEC_CMP	mm ³ par stroke	Desired fuel for torque down control				
DSC_ACT	Enabled/ Disabled	DSC control enable/disable				
DTCCNT		DTC count				
ECT	°C °F V	Engine coolant temperature				
EGRA	%	Exhaust gas recirculation solenoid valve (vent)				
EGRV	%	Exhaust gas recirculation solenoid valve (vacuum)				
EGRV2	On/Off	Exhaust gas recirculation control solenoid valve				
EGRVP	V	Exhaust gas recirculation valve position sensor				
FAN1	On/Off	Cooling fan relay No.2 (Main fan relay)				
FAN3	On/Off	Cooling fan relay No.1 (Add fan relay)				
FFH_STAT	Active/Inactive	FFH status				
	Current					
FIP_FL	%	FIP flow control				
FIP_FL_DSD	mm ³ par stroke	FIP flow desired				
FIP_LRN	Current	FIP learning amount				
FIP_MODE	Normal/Fixed_1/ Fixed_2/ Disabled	FIP duty control status				
FIP_SCV	Current V	FIP suction control valve				
FLT	°C °F	Fuel temperature				
FLTV	V	FLT signal voltage				
FRP	V kPa psi Bar	Fuel rail pressure				
FRP_A	kPa psi Bar	FRP after fuel injection				
GLWPG V	V	Glow plugs				
GPC	On/off	Glow plug control				
IASV	On/Off	intake shutter solenoid valve (full) control				
IASV2	On/Off	intake shutter solenoid valve (full) control				
IAT		Intake air temperature				
IAT2		Intake air temperature No.2				
ICP	kPa psi Bar	Injector control pressure				
IMRC	On/Off	VSC solenoid valve control				
	0					

Monitor item	Unit/Condition	Definition			
INGEAR	On/Off	Load/no load condition			
INJ_LRN_DIS	km mile	Distance from the last injector learning			
INJ_MODE	Normal/ Disabled/ Splitted/Fixed	Fuel injection timing control status			
INJ_TIM	0	Fuel injection timing			
INJ1_CMP		Injector 1 correction value			
INJ2_CMP	mm ³ par stroke	Injector 2 correction value			
INJ3_CMP	mini par stroke	Injector 3 correction value			
INJ4_CMP		Injector 4 correction value			
ISC_CMP	mm ³ par stroke	Fuel correction for idle speed control			
IVS	Idle/Off Idle	Idle switch			
MAF	g/s V	Mass air flow amount			
MAF_C	g	MAF per cylinder			
MAF_C_DSD	g	MAF per cylinder desired			
MAF_LRN_DIS	km mile	Distance from the last MAF learning			
MAINRLY	On/Off	PCM control relay			
МАР	kPa psi Bar V	Manifold absolute pressure			
MIL	On/Off	Malfunction indicator lamp			
MULTI_INJ	1_INJ/2_INJ/ 3_INJ/4_INJ/ 5_INJ/6_INJ/ Disabled	Multiple fuel injection control status			
NUMKEYS	_	Number of keys stored in module			
RPM	RPM	Engine speed			
SC_BOO	On/Off Applied/Not Applied	Brake switch for cruise			
SC_CANCEL	Active/Inactive	Cruise cancel switch			
SC_COAST	Active/Inactive	Cruise coast switch			
SC_MAIN	Active/Inactive	Cruise main switch			
SC_RES	Active/Inactive	Cruise resume switch			
START_SW	On/Off	Starter switch value			
TC_CMP	mm ³ par stroke	Fuel correction when torque down control			
VBCV	%	VBC solenoid valve control			
VFDES	mm ³ par stroke	Volume fuel desired			
VPWR	V	Battery positive voltage			
VSS	km/h mph	Vehicle speed sensor.

OUTLINE

SUPPLEMENTAL SERVICE INFORMATION

 The following changes and/or additions have been made since publication of the Mazda6 Workshop Manual (1749-1*-02G).

PCŇ

• PCM inspection has been modified.

EGR valve position sensor

• Inspection procedure has been added.

On-board diagnostic

Inspection procedure has been modified.

Troubleshooting

• Inspection procedure has been modified.

PCM INSPECTION

Using WDS or Equivalent

B6E404018881105

F2

Caution

• The PCM terminal voltage vary with change in measuring conditions and vehicle conditions. Always carry out a total inspection of the input systems, output systems, and PCM to determine the cause of trouble. Otherwise, diagnosis will be incorrect.

Note

- For replace the PCM, setup the WDS and perform the following.
 - "PCM configuration"
 - "Correction after Parts Installation"
- 1. Connect the WDS or equivalent to the DLC-2. (See F2–38 ON-BOARD DIAGNOSTIC TEST.)
- 2. Turn the engine switch to ON.
- 3. Measure the PID value.
 - If PID value is not within the specification, follow the instructions in ACTION column.

PID Monitor Table							
Monitor item (Definition)	Unit	/Conc	dition	Condition/	Specification (Reference)	Inspection item	PCM terminal
AC_REQ (A/C request signal)	On/Off		On/Off KOER A/C switch ON: On A/C switch OFF: Off		Inspect following PIDs: START_SW, CPP, CPP/PNP, IVS, AC_REQ, APS1, APS2, ECT, RPM.	84	
ACCS (Air conditioning compressor cycling switch)		On/Off		KOER	A/C switch ON and fan switch ON at idle: On Other: Off	Inspect following PIDs: START_SW, CPP, CPP/PNP, IVS, AC_REQ, APS1, APS2, ECT, RPM.	73

EGR VALVE POSITION SENSOR INSPECTION

Voltage Inspection

- 1. Disconnect the vacuum hose from the EGR valve position sensor and connect the vacuum pump to the EGR valve.
- 2. Turn the engine switch to the ON position.
- 3. Verify that the voltage at terminal B changes while applying the vacuum to the EGR valve as show in the graph.
 - If not as specified, replace the EGR valve.

Specification

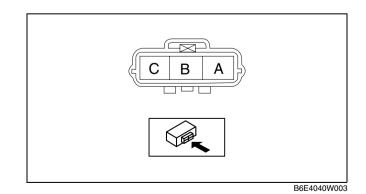

Vacuum	Voltage
0— -36.6 kPa {0— -274.5 mmHg, 0— -10.8 inHg} or above	4.09—4.59 V
-73.3 {-549.8 mmHg, -21.7 inHg} or below	Approx. 0.54 V

Resistance Inspection

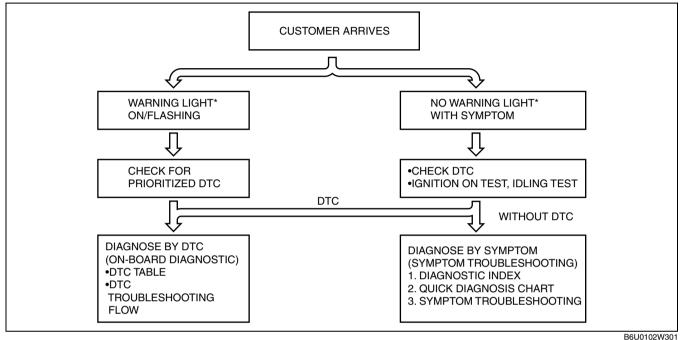

- 1. Disconnect the EGR valve position sensor connector.
- 2. Measure the resistance between terminal A and C.
 - If not as specified, replace the EGR valve.

EGR valve position sensor resistance Approx. 5 kilohms

FOREWORD

- When the customer reports a vehicle malfunction, check the malfunction indicator light (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
 - If the DTC exists, diagnose the applicable DTC inspection. (See F2-40 DTC TABLE.)
 - If the DTC does not exist and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting.

* : Malfunction Indicator Light (MIL), Generator Warning Light, Security Light

OBD PENDING TROUBLE CODES

These appear when a problem is detected in a monitored system. The MIL is illuminated when a problem is
detected in two consecutive drive cycles. The code for a failed system is stored in the PCM memory in the first
drive cycle. This code is called the pending code. If the problem is not found in the second drive cycle, the PCM
judges that the system returned to normal or the problem was mistakenly detected, and deletes the pending
code. If the problem is found in the second drive cycle too, the PCM judges that the system has failed, deletes
the pending code, illuminates the MIL and stores the DTC.

OBD FREEZE FRAME DATA

This is the technical data which indicates the engine's condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of Misfire or Fuel System DTCs. Once freeze frame data for a Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD READ/CLEAR DIAGNOSTIC TEST RESULTS

 This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD PARAMETER IDENTIFICATION (PID) ACCESS

 The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

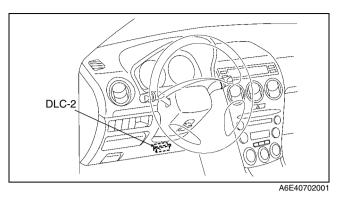

ON-BOARD DIAGNOSTIC TEST

DTCs Retrieving Procedure

1. Perform the necessary vehicle preparation and visual inspection.

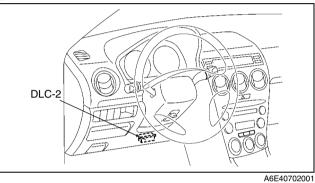

B6F407018881102

- Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the steering column.
- 3. Retrieve DTC using WDS or equivalent.

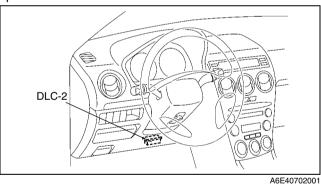

Pending Trouble Code Access Procedure

- 1. Perform the necessary vehicle preparation and visual inspection.
- Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the steering column.
- 3. Retrieve pending trouble code using WDS or equivalent.

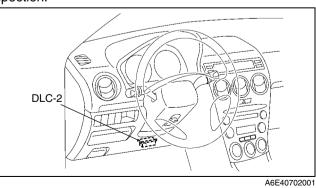

Freeze Frame PID Data Access Procedure

- 1. Perform the necessary vehicle preparation and visual inspection.
- Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the steering column.
- 3. Retrieve FREEZE FRAME PID DATA using WDS or equivalent.

PID/DATA Monitor and Record Procedure

- 1. Perform the necessary vehicle preparation and visual inspection.
- Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the steering column.
- 3. Access and monitor PIDs using WDS or equivalent.

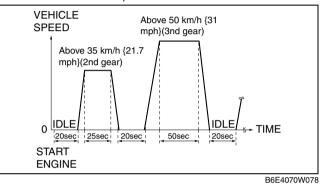

OBD DRIVE MODE

 Performing the Drive Mode inspects the OBD system for proper operation and must be performed to ensure that no additional DTCs are present.

- During Drive Mode, the following systems are inspected:
 - P0101 MAF sensor circuit range/performance problem
 - P0106 Boost sensor circuit range/performance problem
 - P0401 EGR flow insufficient detected
 - P0402 EGR flow excessive detected
 - P0404 EGR valve stuck
 - P2227 BARO sensor circuit range/performance problem

Caution

- While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.
- When the WDS or equivalent is used to observe monitor system status while driving, be sure to
 have another technician with you, or record the data in the WDS or equivalent using the PID/DATA
 MONITOR AND RECORD function and inspect later.
- 1. Warm up the engine to normal operating temperature.
- 2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
- 3. Drive the vehicle five times in the driving mode indicated in the figure on a road with a 0% gradient.
- 4. Stop the vehicle.
- 5. Verify no DTCs are available.

DTC TABLE

DTC No.	Condition	MIL	DC	Memory function	Page
P0016	Crankshaft position-camshaft position correlation malfunction	OFF	2	×	(See F2-42 DTC P0016.)

DTC P0016

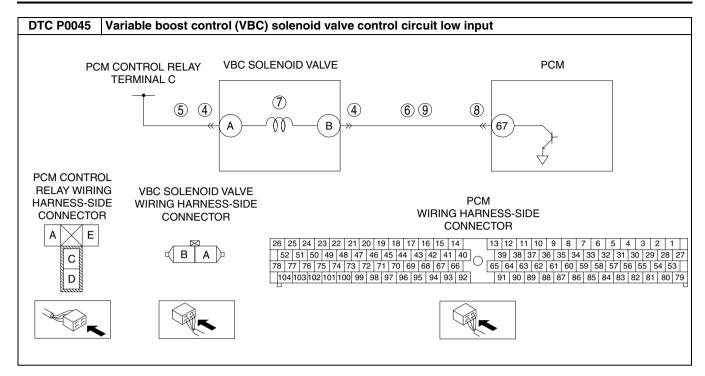

DTC P0016	Crankshaft position-camshaft position correlation malfunction
DETECTION CONDITION	 The PCM monitors the input signals from the CKP sensor and the CMP sensor while the engine is running. If the input signals from the CKP sensor and the CMP sensor do not correspond, the PCM determines that there is a correlation malfunction between crankshaft and camshaft positions. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 CKP sensor malfunction CMP sensor malfunction Loose timing belt PCM malfunction

Diagnostic	procedure
-------------------	-----------

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service information availability. 	Yes	Perform repair or diagnosis according to the availableService Information.If the vehicle is not repaired, go to the next step.
	 Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE)
	 Is P0336, P0337, P0341 or P0342 on FREEZE FRAME DATA? 	No	Go to the next step.
5	INSPECT CKP SENSOR	Yes	Replace the CKP sensor, go to Step 8.
	Inspect the CKP sensor.Is there any malfunction?	No	Go to the next step.
6	INSPECT CMP SENSOR	Yes	Replace the CMP sensor, go to Step 8.
	Inspect the CMP sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT TIMING BELT	Yes	Reinstall the timing belt, go to the next step.
	Inspect the timing belt installation.Is any malfunction?	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0016	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0045

DTC P0045	Variable boost control (VBC) solenoid valve control circuit low input
DETECTION CONDITION	 The PCM monitors the output signal when the PCM controls the variable boost control solenoid valve between 30 and 70%. If the current of the variable boost control solenoid valve is less than 0.8 A during variable boost control solenoid valve control, the PCM determines that there is a malfunction in the variable boost control solenoid valve control circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 VBC solenoid valve malfunction Connector or terminal malfunction Open circuit in wiring harness between PCM control relay terminal C and VBC solenoid valve terminal A Open circuit in wiring harness between VBC solenoid valve terminal B and PCM terminal 67 Short to GND in wiring harness between VBC solenoid valve terminal B and PCM terminal 67 PCM malfunction

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Is any DTCs present?	No	DTC troubleshooting completed.

DTC P0088

B6E407000001103

DTC P0088	Fuel pressure system too high
DETECTION	• The PCM monitors the fuel pressure in the common rail from the fuel pressure sensor while the engine
CONDITION	running. If the fuel pressure is more than 188 MPa {1,917 kgf/cm ² , 27,267 psi}, the PCM determines that the fuel pressure is too high.
POSSIBLE CAUSE	 Suction control valve malfunction Fuel pressure sensor malfunction Fuel pressure limiter malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service information availability. 	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
	 Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	 Is P0627, P0628, P0629, P0191, P0192 or P0193 on FREEZE FRAME DATA? 	No	Go to the next step.
5	INSPECT SUCTION CONTROL VALVE	Yes	Repair the supply pump, go to Step 8.
	Inspect the suction control valve.Is there any malfunction?	No	Go to the next step.
6	INSPECT FUEL PRESSURE SENSOR	Yes	Replace the common rail, go to Step 8.
	Inspect the fuel pressure sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT COMMON RAIL	Yes	Replace the common rail, go to the next step.
	Inspect the common rail.Is there any malfunction?	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0088	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0093

DTC P0093 Fuel system leak detection The PCM monitors the fuel pressure in the common rail from the fuel pressure sensor while the engine ٠ running. If the fuel pressure is lower after the fuel injection than the preprogrammed criteria, the PCM determines fuel system leakage. DETECTION **Diagnostic support note** CONDITION The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • • The DTC is stored in the PCM memory. Fuel leakage or clogged fuel line • Suction control valve malfunction Fuel pressure sensor malfunction • POSSIBLE ٠ CAUSE Fuel injector malfunction • • PCM malfunction

Diagnostic procedure

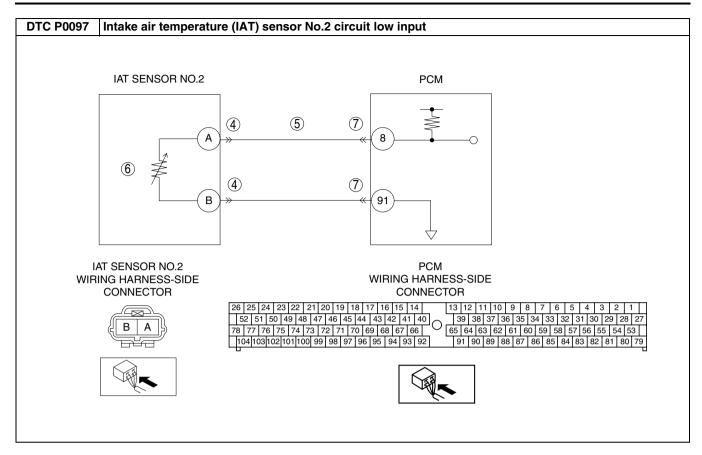

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step. Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
0	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	 Is P0192, P0193 or P1190 on FREEZE FRAME DATA? 	No	Go to the next step.
5	INSPECT FUEL LINE	Yes	Repair or replace the suspected fuel line, go to Step 9.
	 Turn the engine switch off. Inspect for fuel leakage or clogging in the following fuel lines for each cylinder: Supply pump and Common rail. Common rail and fuel injector. Is there any malfunction? 	No	Go to the next step.
6	INSPECT SUCTION CONTROL VALVE	Yes	Repair the supply pump, go to Step 9.
	Inspect the suction control valve.Is there any malfunction?	No	Go to the next step.
7	INSPECT FUEL PRESSURE SENSOR	Yes	Replace the common rail, go to Step 9.
	Inspect the fuel pressure sensor.Is there any malfunction?	No	Go to the next step.
8	INSPECT FUEL INJECTOR	Yes	Replace the fuel injector, go to the next step.
	Inspect the fuel injector.Is there any malfunction?	No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0093	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0096	B6E407000001105				
DTC P0096	Intake air temperature (IAT) sensor No.2 circuit range/performance problem				
DETECTION CONDITION	 The PCM monitors the input signal from intake air temperature sensor No.2. If the difference between the maximum and minimum value of the intake air temperature sensor No.2 is less than 1 °C {1.8 °F}, the PCM determines that there is a malfunction in intake air temperature sensor No.2. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

DTC P0097

DTC P0097	Intake air temperature (IAT) sensor No.2 circuit low input	
DETECTION CONDITION	 The PCM monitors the input signal from intake air temperature sensor No.2. If the voltage from intake air temperature sensor No.2 is less than 0.14 V, the PCM determines that there is a malfunction in the intake air temperature sensor No.2 circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 	
POSSIBLE CAUSE	 IAT sensor No.2 malfunction Connector or terminal malfunction Short to GND in wiring harness between IAT sensor No.2 terminal A and PCM terminal 8 PCM malfunction 	

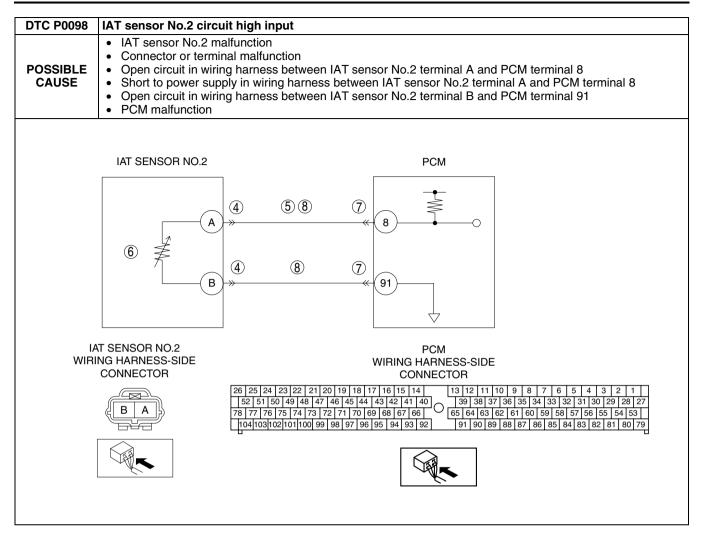

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT IAT SENSOR NO.2 CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Disconnect the IAT sensor No.2 connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IAT SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
	 Turn the engine switch off. Inspect for continuity between IAT sensor No.2 terminal A (wiring harness-side) and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT IAT SENSOR NO.2	Yes	Replace the IAT sensor No.2, then go to Step 8.
	Inspect the IAT sensor No.2.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0097	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See 52, 20, ORD, DRIVE MODE.) 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0098

DIC F0090	B6E407000001107
DTC P0098	IAT sensor No.2 circuit high input
DETECTION CONDITION	 The PCM monitors the input signal from intake air temperature sensor No.2. If the voltage from intake air temperature sensor No.2 is more than 4.92 V, the PCM determines that there is a malfunction in the intake air temperature sensor No.2 circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	 Has FREEZE FRAME DATA been recorded? 		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	 Verify related service repair information 		If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	• IS any related repair mornation available?	Yes	Co to the port stop
3	CONCERN INTERMITTENT OR CONSTANT?	No	Go to the next step. Intermittent concern exists.
	Connect the WDS or equivalent to the DLC-2.	INO	Perform the "INTERMITTENT CONCERNS
	Clear the DTC from the PCM memory using		TROUBLESHOOTING".
	the WDS or equivalent.		
	Start the engine.		
	Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.)		
	 Is the PENDING CODE for this DTC present? 		
4	INSPECT MAF SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 7.
	POOR CONNECTION	No	Go to the next step.
	Turn the engine switch off.		
	• Disconnect the MAF sensor connector.		
	 Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). 		
	 Is there any malfunction? 		
5	INSPECT MAF SENSOR	Yes	Replace the MAF/IAT sensor, then go to Step 7.
	 Inspect the MAF sensor. 	No	Go to the next step.
	 Is there any malfunction? 		
6	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	CONNECTION	No	Go to the next step.
	Turn the engine switch off.Disconnect the PCM connector.		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
	 Is there any malfunction? 		
7	VERIFY TROUBLESHOOTING OF DTC P0101	Yes	Replace the PCM, then go to the next step.
	COMPLETED	No	Go to the next step.
	 Make sure to reconnect all disconnected connectors. 		
	 Clear the DTC from the PCM memory using 		
	the WDS or equivalent.		
	Perform the Repair Verification Drive Mode.		
	(See F2–39 OBD DRIVE MODE.)		
	Is the PENDING CODE for this DTC present?	V	
8	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection. (See F_{2-40} DTC TABLE)
	 Perform the "AFTER REPAIR PROCEDURE". Are any DTCs present? 	No	(See F2-40 DTC TABLE.)
		No	DTC troubleshooting completed.

DTC P0102

DTC P0102	Mass air flow (MAF) sensor circuit low input	
DETECTION CONDITION	 The PCM monitors the input signal from the air flow sensor. If the voltage from the air flow sensor is less than 0.15 V, the PCM determines that there is a malfunction in the air flow sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 	
POSSIBLE CAUSE	 MAF sensor malfunction Connector or terminal malfunction Open circuit in wiring harness between PCM control relay terminal C and MAF/IAT sensor terminal A Open circuit in wiring harness between MAF/IAT sensor terminal C and PCM terminal 9 Short to GND in wiring harness between MAF/IAT sensor terminal C and PCM terminal 9 PCM malfunction 	

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	 Verify related service repair information 		• If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	Is any related repair information available?		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using 	No	Intermittent concern exists.
			Perform the "INTERMITTENT CONCERNS
	the WDS or equivalent.		TROUBLESHOOTING".
	 Start the engine. 		
	 Is the same DTC present? 		
4	INSPECT MAF/IAT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 10.
	POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. 		
	 Disconnect the MAF/IAT sensor connector. 		
	 Inspect for poor connection (such as damaged/ nulled out ping, correction) 		
	pulled-out pins, corrosion).Is there any malfunction?		
5	-	Vaa	Co to the part stop
5	INSPECT MAF SENSOR POWER CIRCUIT FOR OPEN CIRCUIT	Yes	1
	 Turn the engine switch to the ON position 	No	Repair or replace the wiring harness for a possible open circuit or short to GND, then go to Step 10.
	(Engine off).		
	 Measure the voltage between MAF/IAT sensor 		
	terminal A (wiring harness-side) and body		
	GND.		
	Is the voltage B+?		
6	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR	Yes	
	SHORT TO GND		GND, then go to Step 10.
	 Turn the engine switch off. Inspect for continuity between MAF/IAT sensor 	No	Go to the next step.
	terminal C (wiring harness-side) and body		
	GND.		
	 Is there continuity? 		
7	INSPECT MAF SENSOR	Yes	Replace the MAF/IAT sensor, then go to Step 10.
	 Inspect the MAF sensor. 	No	Go to the next step.
	 Is there any malfunction? 		·
8	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 10.
	CONNECTION	No	Go to the next step.
	Turn the engine switch off.		
	 Disconnect the PCM connector. Inspect for poor connection (such as damaged/ 		
	 Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). 		
	 Is there any malfunction? 		
9	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR	Yes	Go to the next step.
5	OPEN CIRCUIT	No	Repair or replace the wiring harness for a possible open
	Turn the engine switch off.	110	circuit, then go to the next step.
	 Inspect for continuity between MAF/IAT sensor 		
	terminal C (wiring harness-side) and PCM		
	terminal 9 (wiring harness-side).		
	Is there continuity?		
10	VERIFY TROUBLESHOOTING OF DTC P0102	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
	 Make sure to reconnect all disconnected connectors 		
	connectors.Clear the DTC from the PCM memory using		
	the WDS or equivalent.		
	the WDS or equivalent. Start the engine. 		

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

STEP	INSPECTION	0	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT MAF/IAT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
	 POOR CONNECTION Turn the engine switch off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
	 Turn the engine switch to the ON position (Engine off). Measure the voltage between MAF/IAT sensor terminal C (wiring harness-side) and body GND. Is the voltage more than 4.9 V? 	No	Go to the next step.
6	INSPECT MAF SENSOR	Yes	Replace the MAF/IAT sensor, then go to Step 9.
Ū	Inspect the MAF sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT MAF SENSOR GND CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between MAF/IAT sensor terminal B (wiring harness-side) and PCM terminal 14 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0103	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)	No	DTC troubleshooting completed.

DTC P0107

B6E407000100105

DTC P0107	Boost sensor circuit low input
DETECTION CONDITION	 The PCM monitors the input signal from the manifold absolute pressure. If the voltage from the manifold absolute pressure sensor is less than 0.4 V, the PCM determines that there is a malfunction in the manifold absolute pressure sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Boost sensor malfunction Connector or terminal malfunction Short to GND in wiring harness between boost sensor terminal C and PCM terminal 90 Short to GND in wiring harness between boost sensor terminal B and PCM terminal 36 PCM malfunction

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information.
	 Verify related service repair information availability. Is any related repair information available? 	No	If the vehicle is not repaired, go to the next step. Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT BOOST SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Disconnect the boost sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT BOOST SENSOR CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: Boost sensor terminal C (wiring harness-side) and body GND Boost sensor terminal B (wiring harness-side) and body GND Is there continuity? 	No	Go to the next step.
6	INSPECT BOOST SENSOR	Yes	Replace the boost sensor, then go to Step 8.
	Inspect the boost sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 8.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0107	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	 Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) Are any DTCs present? 	No	(See F2-40 DTC TABLE.) DTC troubleshooting completed.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	Verify related service repair information availability.		• If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
	Is any related repair information available?		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using 		Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
	the WDS or equivalent.		
	Start the engine.		
	 Is the same DTC present? 		
4	INSPECT MAF/IAT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 7.
	POOR CONNECTION	No	Go to the next step.
	Turn the engine switch off.		
	Disconnect the MAF/IAT sensor connector.		
	 Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). 		
	 Is there any malfunction? 		
5	INSPECT IAT SENSOR NO.1	Yes	Replace the MAF/IAT sensor, then go to Step 7.
	 Inspect the IAT sensor No.1. 	No	Go to the next step.
	Is there any malfunction?		
6	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
	Turn the engine switch off.Disconnect the PCM connector.		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
	 Is there any malfunction? 		
7	VERIFY TROUBLESHOOTING OF DTC P0111	Yes	Replace the PCM, then go to the next step.
	COMPLETED	No	Go to the next step.
	Make sure to reconnect all disconnected		
	connectors.Clear the DTC from the PCM memory using		
	the WDS or equivalent.		
	 Start the engine and warm it up completely. 		
	 Is the PENDING CODE for this DTC present? 		
8	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	• Perform the Repair Verification Drive Mode.		(See F2-40 DTC TABLE.)
	(See F2-39 OBD DRIVE MODE.)	No	DTC troubleshooting completed.
	Are any DTCs present?		

DTC P0112

DTC P0112	Intake air temperature (IAT) sensor No.1 circuit low input
 The PCM monitors the input signal from intake air temperature sensor No.1. If the voltage for temperature sensor No.1 is less than 0.14 V, the PCM determines that there is a malfunction air temperature sensor No.1 circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 	
POSSIBLE CAUSE	 IAT sensor No.1 malfunction Connector or terminal malfunction Short to GND in wiring harness between MAF/IAT sensor terminal D and PCM terminal 60 PCM malfunction

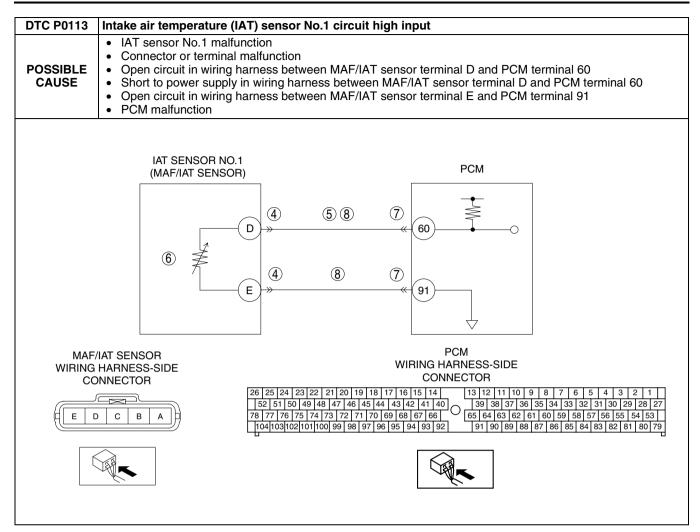

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT MAF/IAT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 8.
	 Turn the engine switch off. Inspect for continuity between MAF/IAT sensor terminal D (wiring harness-side) and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT IAT SENSOR NO.1	Yes	Replace the MAF/IAT sensor, then go to Step 8.
	Inspect the IAT sensor No.1.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0112	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0113

DTC P0113	Intake air temperature (IAT) sensor No.1 circuit high input			
DETECTION CONDITION	 The PCM monitors the input signal from intake air temperature sensor No.1. If the voltage from intake air temperature sensor No.1 is more than 4.92 V, the PCM determines that there is a malfunction in the intake air temperature sensor No.1 circuit. Diagnostic support note The MIL illuminates if the PCM detects the characteristic sensitive and the first drive eveloped. 			
	 The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 			

F2

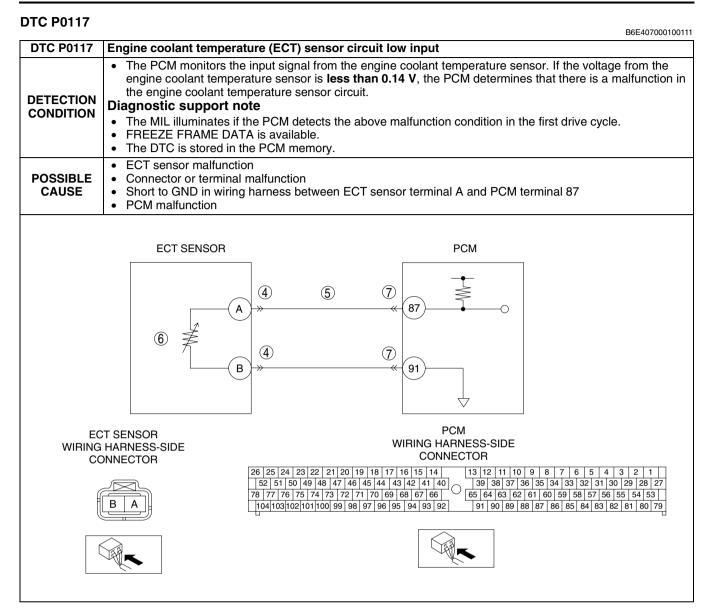

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information.
	Verify related service repair information		• If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT MAF/IAT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
	 POOR CONNECTION Turn the engine switch off. Disconnect the MAF/IAT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IAT SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
	 Turn the engine switch to the ON position (Engine off). Measure the voltage between MAF/IAT sensor terminal D (wiring harness-side) and body GND. Is the voltage more than 4.92 V? 	No	Go to the next step.
6	INSPECT IAT SENSOR NO.1	Yes	Replace the MAF/IAT sensor, then go to Step 9.
-	Inspect the IAT sensor No.1.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT IAT SENSOR NO.1 CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between the following terminals: MAF/IAT sensor terminal D (wiring harnessside) and PCM terminal 60 (wiring harnessside) MAF/IAT sensor terminal E (wiring harnessside) and PCM terminal 91 (wiring harnessside) Is there continuity? 	No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0113	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0116

DTC P0116		B6E40700010011				
DTC P0116	Engine coolant temperature (ECT) sensor range					
DETECTION CONDITION	 the maximum and the minimum value of the EC is a malfunction in the engine coolant tempera Diagnostic support note The MIL illuminates if the PCM detects the about in one drive cycle while the DTC for the same 	ove malfunction condition in two consecutive drive cycles or				
POSSIBLE CAUSE	 ECT sensor malfunction Connector or terminal malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine and warm it up completely. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT ECT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Disconnect the ECT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT ECT SENSOR	Yes	Replace the ECT sensor, then go to Step 8.
	Inspect the ECT sensor.Is there any malfunction?	No	Go to the next step.
6	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 8.
	 Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 		
7	COMPARE ECT PID VALUE	Yes	Go to the next step.
	 Prepare a new ECT sensor. Clear the DTC from the PCM memory using the WDS or equivalent. Connect the ECT sensor connector to the new ECT sensor without installing to the engine. Turn the engine switch to the ON position and record the ECT PID value. Replace the malfunctioning ECT sensor with new one. Start the engine and wait for 5 min. Record the ECT PID value. Is the difference between ECT PID values more than 3°C {5.4 °F}? 	No	 Inspect the thermostat. If thermostat is normal, go to the next step. If thermostat is not normal, replace thermostat, then g to the next step
8	VERIFY TROUBLESHOOTING OF DTC P0116	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine and warm it up completely. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

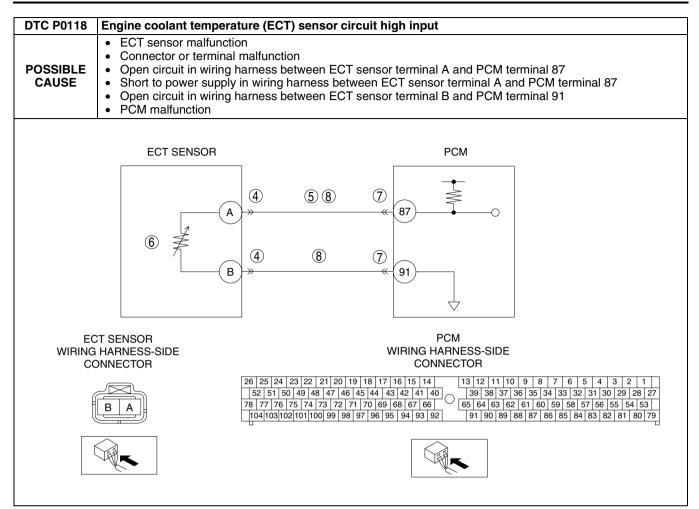

Diagnostic procedure

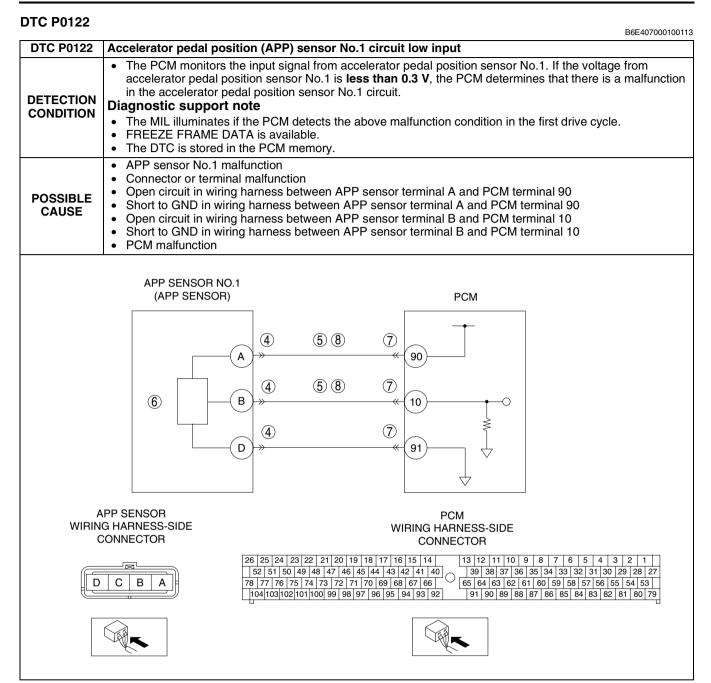

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT ECT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Disconnect the ECT sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT ECT SENSOR SIGNAL CIRCUIT FOR	Yes	Repair or replace the wiring harness for a possible short to
	SHORT TO GND		GND, then go to Step 8.
	 Turn the engine switch off. Disconnect the ECT sensor connector. Inspect for continuity between ECT sensor terminal A (wiring harness-side) and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT ECT SENSOR	Yes	Replace the ECT sensor, then go to Step 8.
	Inspect the ECT sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0117	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDUREPerform the Repair Verification Drive Mode.	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0118

DTC P0118	Engine coolant temperature (ECT) sensor circuit high input		
DETECTION CONDITION	 The PCM monitors the input signal from the engine coolant temperature sensor. If the voltage from the engine coolant temperature sensor is more than 4.92 V, the PCM determines that there is a malfunction in the engine coolant temperature sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	
_	AVAILABILITY		repair information.
	Verify related service repair information		 If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	 Is any related repair information available? 	NO	
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
0	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using 		-
		No	Intermittent concern exists.
			Perform the "INTERMITTENT CONCERNS
	the WDS or equivalent.		TROUBLESHOOTING".
	Start the engine.		
	 Is the same DTC present? 		
4	INSPECT ECT SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
-	POOR CONNECTION		
	Turn the engine switch off.	No	Go to the next step.
	 Disconnect the ECT sensor connector. 		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
	Is there any malfunction?		
5	INSPECT ECT SENSOR SIGNAL CIRCUIT FOR	Yes	Repair or replace the wiring harness for a possible short to
-	SHORT TO POWER SUPPLY		power supply, then go to Step 9.
	Turn the engine switch to the ON position	No	Go to the next step.
	(Engine off).		
	Measure the voltage between ECT sensor		
	terminal A (wiring harness-side) and body		
	GND.		
	Is the voltage more than 4.92 V?		
6	INSPECT ECT SENSOR	Yes	Replace the ECT sensor, then go to Step 9.
	 Inspect the ECT sensor. 	No	Go to the next step.
	 Is there any malfunction? 		
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	CONNECTION	No	Go to the next step.
	 Turn the engine switch off. 		
	 Disconnect the PCM connector. 		
	Inspect for poor connection (such as damaged/		
	pulled-out pins, corrosion).		
	Is there any malfunction?		
8	INSPECT ECT SENSOR CIRCUIT FOR OPEN	Yes	Go to the next step.
	CIRCUIT	No	Repair or replace the wiring harness for a possible open
	 Turn the engine switch off. 		circuit, then go to the next step.
	 Inspect for continuity between the following 		
	terminolo		
	terminals:		
	- ECT sensor terminal A (wiring harness-side)		
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) 		
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) 		
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) 		
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? 	Vaa	Penlage the PCM, then go to the post stor
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 	Yes	Replace the PCM, then go to the next step.
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED 	Yes	Replace the PCM, then go to the next step. Go to the next step.
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected 		
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. 		
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? 9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. 		
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. 		
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal 8 (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? VERIFY AFTER REPAIR PROCEDURE 		Go to the next step. Go to the applicable DTC inspection.
	 ECT sensor terminal A (wiring harness-side) and PCM terminal 87 (wiring harness-side) ECT sensor terminal B (wiring harness-side) and PCM terminal 91 (wiring harness-side) Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.

Diagnostic	procedure
------------	-----------

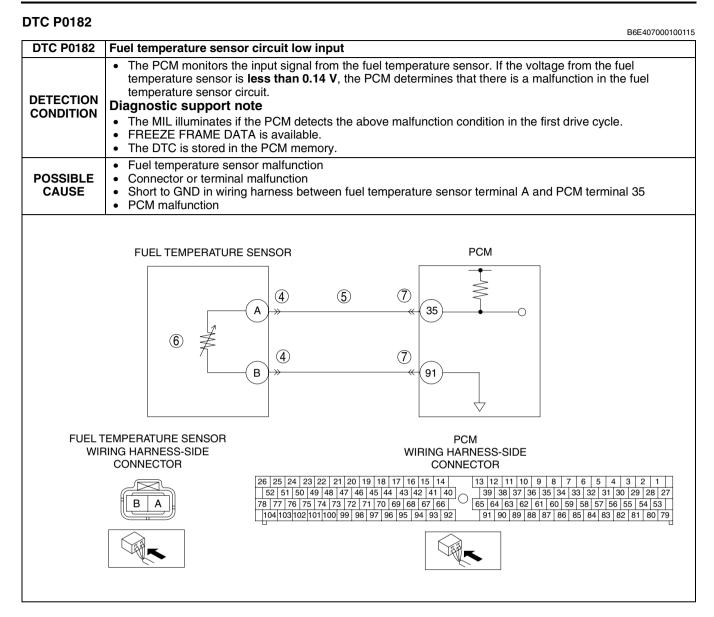

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	 Verify related service repair information availability. Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
Ū	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT APP SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
	 POOR CONNECTION Turn the engine switch off. Disconnect the APP sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: APP sensor terminal A (wiring harness-side) and body GND APP sensor terminal B (wiring harness-side) and body GND Is there continuity? 	No	Go to the next step.
6	INSPECT APP SENSOR NO.1	Yes	Replace the APP sensor, then go to Step 9.
	Inspect the APP sensor No.1.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT APP SENSOR NO.1 CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between the following terminals: APP sensor terminal A (wiring harness-side) and PCM terminal 90 (wiring harness-side) APP sensor terminal B (wiring harness-side) and PCM terminal 10 (wiring harness-side) Is there continuity? 	No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0122	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0123

DICFUIZS	B6E407000100114		
DTC P0123	Accelerator pedal position (APP) sensor No.1 circuit high input		
DETECTION CONDITION	 The PCM monitors the input signal from accelerator pedal position sensor No.1. If the voltage from accelerator pedal position sensor No.1 is more than 4.7 V, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.1 circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		
POSSIBLE CAUSE	 APP sensor No.1 malfunction Connector or terminal malfunction Short to power supply in wiring harness between APP sensor terminal B and PCM terminal 10 Open circuit in wiring harness between APP sensor terminal D and PCM terminal 91 PCM malfunction

I

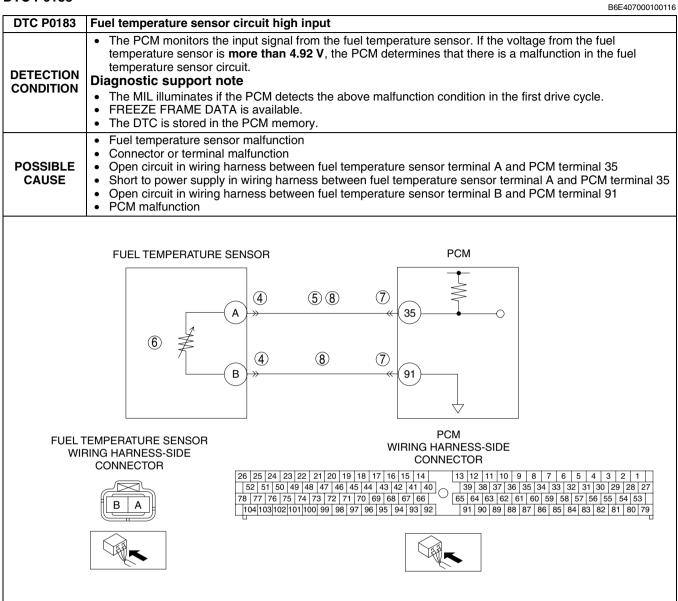

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	Verify related service repair information		If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	 Is any related repair information available? 		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
-	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	• Connect the WDS or equivalent to the DLC-2.	NO	Perform the "INTERMITTENT CONCERNS
	Clear the DTC from the PCM memory using		TROUBLESHOOTING".
	the WDS or equivalent.		
	Start the engine.		
	Is the same DTC present?		
4	INSPECT APP SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
-	POOR CONNECTION	No	Go to the next step.
	Turn the engine switch off.	NO	do to the flext step.
	 Disconnect the APP sensor connector. 		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
	 Is there any malfunction? 		
5	INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT	Yes	Repair or replace the wiring harness for a possible short to
	FOR SHORT TO POWER SUPPLY		power supply, then go to Step 9.
	Turn the engine switch to the ON position	No	Go to the next step.
	(Engine off).		
	Measure the voltage between APP sensor		
	terminal B (wiring harness-side) and body		
	GND.		
	 Is the voltage more than 4.7 V? 		
6	INSPECT APP SENSOR NO.1	Yes	Replace the APP sensor, then go to Step 9.
	 Inspect the APP sensor No.1. 	No	Go to the next step.
	 Is there any malfunction? 		
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	CONNECTION	No	Go to the next step.
	Turn the engine switch off.		
	 Disconnect the PCM connector. 		
	Inspect for poor connection (such as damaged/		
	pulled-out pins, corrosion).		
	 Is there any malfunction? 		
8	INSPECT APP SENSOR NO.1 GND CIRCUIT	Yes	Go to the next step.
	FOR OPEN CIRCUIT	No	Repair or replace the wiring harness for a possible open
	Turn the engine switch off.		circuit, then go to the next step.
	 Inspect for continuity between APP sensor 		
	terminal D (wiring harness-side) and PCM		
	terminal 91 (wiring harness-side).		
	Is there continuity?		
9	VERIFY TROUBLESHOOTING OF DTC P0123	Yes	Replace the PCM, then go to the next step.
	COMPLETED	No	Go to the next step.
	Make sure to reconnect all disconnected		
	connectors.		
	Clear the DTC from the PCM memory using		
	the WDS or equivalent.		
	Start the engine.		
	 Is the same DTC present? 		
			Go to the applicable DTC inspection.
10	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
10		Yes	(See F2-40 DTC TABLE.)
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) 	Yes No	

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT FUEL TEMPERATURE SENSOR	Yes	Repair or replace the terminal, then go to Step 8.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Disconnect the fuel temperature sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT FUEL TEMPERATURE SENSOR	Yes	Repair or replace the wiring harness for a possible short to
	SIGNAL CIRCUIT FOR SHORT TO GND		GND, then go to Step 8.
	 Turn the engine switch off. Disconnect the fuel temperature sensor connector. Inspect for continuity between fuel temperature sensor terminal A (wiring harness-side) and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT FUEL TEMPERATURE SENSOR	Yes	Replace the fuel temperature sensor, then go to Step 8.
	Inspect the fuel temperature sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0182	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	 Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) Are any DTCs present? 	No	(See F2-40 DTC TABLE.) DTC troubleshooting completed.

DTC P0183

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	Verify related service repair information		 If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	 Is any related repair information available? 		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	• Connect the WDS or equivalent to the DLC-2.		Perform the "INTERMITTENT CONCERNS
	Clear the DTC from the PCM memory using		TROUBLESHOOTING".
	the WDS or equivalent.		
	Start the engine.		
	Is the same DTC present?		
4	INSPECT FUEL TEMPERATURE SENSOR	Yes	Repair or replace the terminal, then go to Step 9.
	CONNECTOR FOR POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. 		
	Disconnect the fuel temperature sensor		
	connector.		
	 Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). 		
	 Is there any malfunction? 		
-	,	Vee	Densiy sy yanlasa tha wijing hawaaa fay a naasihla ahayt t
5		Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
	SIGNAL CIRCUIT FOR SHORT TO POWER		
	SUPPLY	No	Go to the next step.
	Turn the engine switch to the ON position (Engine off)		
	(Engine off).Measure the voltage between fuel temperature		
	sensor terminal A (wiring harness-side) and		
	body GND.		
	Is the voltage more than 4.92 V?		
6	INSPECT FUEL TEMPERATURE SENSOR	Yes	Replace the fuel temperature sensor, then go to Step 9.
	 Inspect the fuel temperature sensor. 	No	Go to the next step.
	 Is there any malfunction? 		
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	CONNECTION	No	Go to the next step.
	Turn the engine switch off.		
	 Disconnect the PCM connector. 		
	Inspect for poor connection (such as damaged/		
	pulled-out pins, corrosion).		
	Is there any malfunction?		-
8	INSPECT FUEL TEMPERATURE SENSOR	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open
	Turn the engine switch off.		circuit, then go to the next step.
	 Inspect for continuity between the following terminale: 		
	terminals: — Fuel temperature sensor terminal A (wiring		
	harness-side) and PCM terminal 35 (wiring		
	harness-side)		
	— Fuel temperature sensor terminal B (wiring		
	harness-side) and PCM terminal 91 (wiring		
	harness-side)		
	 Is there continuity? 		
			Replace the PCM, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0183	Yes	
9			
9	VERIFY TROUBLESHOOTING OF DTC P0183	Yes No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0183 COMPLETED		
9	 VERIFY TROUBLESHOOTING OF DTC P0183 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using 		
9	 VERIFY TROUBLESHOOTING OF DTC P0183 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. 		
9	 VERIFY TROUBLESHOOTING OF DTC P0183 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using 		

STEP	INSPECTION		ACTION
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0191

	B6E40/00010011
DTC P0191	Fuel pressure sensor range/performance problem
	 The PCM monitors the fuel pressure in the common rail and input signal from the fuel pressure sensor while the engine is running. If any one of the following conditions is met, the PCM determines that there is malfunction in the fuel pressure sensor range/performance problem. The PCM calculates the difference between the actual fuel pressure and the target fuel pressure. If the pressure difference more than 2 MPa {20 kgf/cm², 290 psi}, the PCM determines that there is a
DETECTION CONDITION	 malfunction in fuel pressure sensor range/performance problem. The PCM monitors the input signal from fuel pressure sensor. If the difference between the maximum and minimum voltage of the fuel pressure sensor is less than 0.015 V, the PCM determines that there is a malfunction in fuel pressure sensor range/performance problem.
	Diagnostic support note
	The MIL does not illuminates.The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Fuel pressure sensor malfunction Suction control valve malfunction Clogged fuel line PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Information availability. 	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
	 Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT FUEL PRESSURE SENSOR	Yes	Replace the common rail, go to Step 7.
	Inspect the fuel pressure sensor.Is there any malfunction?	No	Go to the next step.
5	INSPECT SUCTION CONTROL VALVE	Yes	Repair the supply pump, go to Step 7.
	Inspect the suction control valve.Is there any malfunction?	No	Go to the next step.
6	INSPECT FUEL LINETurn the engine switch off.	Yes	Repair or replace the suspected fuel line, go to the next step.
	 Inspect for clogging in the following fuel lines for each cylinder: — Common rail and fuel injector. — Common rail and fuel tank. Is there any malfunction? 	No	Go to the next step.
7	VERIFY TROUBLESHOOTING OF DTC P0191	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Start the engine. Is the same DTC present? 	No	Go to the next step.
8	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	Perform the Repair Verification Drive Mode.		(See F2-40 DTC TABLE)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0192

DTC P0192	Fuel pressure sensor circuit low input
DETECTION CONDITION	 The PCM monitors the input voltage from the fuel pressure sensor while the engine is running. If the input voltage from the fuel pressure sensor is less than 0.4 V, the PCM determines there is a malfunction in the fuel pressure sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Fuel pressure sensor malfunction Connector or terminal malfunction Short to GND in wiring harness between fuel pressure sensor terminal C and PCM terminal 90 Open circuit in wiring harness between fuel pressure sensor terminal C and PCM terminal 90 Short to GND in wiring harness between fuel pressure sensor terminal B and PCM terminal 61 Fuel pressure sensor signal and GND circuits are shorted each other. PCM malfunction

Diagnostic	procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
	 Verify related Service Information availability. Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	-
3	CONCERN INTERMITTENT OR CONSTANT?	No	Go to the next step. Intermittent concern exists.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	NO	Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT FUEL PRESSURE SENSOR	Yes	Repair or replace the suspected terminal, go to Step 11.
-	CONNECTOR FOR POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	NO	Go to the next step.
5	INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 11.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: Fuel pressure sensor terminal C Fuel pressure sensor terminal B Is there continuity? 	No	Go to the next step.
6	INSPECT FUEL PRESSURE SENSOR POWER CIRCUIT FOR OPEN CIRCUIT	Yes	Repair or replace the wiring harness for an open circuit, go to Step 11.
	 Turn the engine switch to the ON position. (Engine off) Inspect the voltage at fuel pressure sensor terminal C (wiring harness side). Is the voltage below 1.0 V? 	No	Go to the next step.
7	INSPECT FUEL PRESSURE SENSOR CIRCUIT	Yes	Repair or replace wiring harness for a short, go to Step 11.
	FOR SHORT	No	Go to the next step.
	 Turn the engine switch off. Inspect for continuity between fuel pressure sensor terminals B and A. Is there continuity? 		
8	INSPECT FUEL TEMPERATURE SENSOR	Yes	Repair the supply pump, go to Step 11.
	Inspect the fuel temperature sensor.Is there any malfunction?	No	Go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 11.
	CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
10	INSPECT FUEL PRESSURE SENSOR CIRCUIT	Yes	Repair or replace suspected terminal, go to the next step.
	 FOR OPEN Turn the ignition switch off. Inspect continuity between fuel pressure sensor terminal B and PCM terminal 61. Is there continuity? 	No	Go to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0192	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. 	No	Go to the next step.
	Start the engine.Is the same DTC present?		

STEP	INSPECTION		ACTION
12	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0193

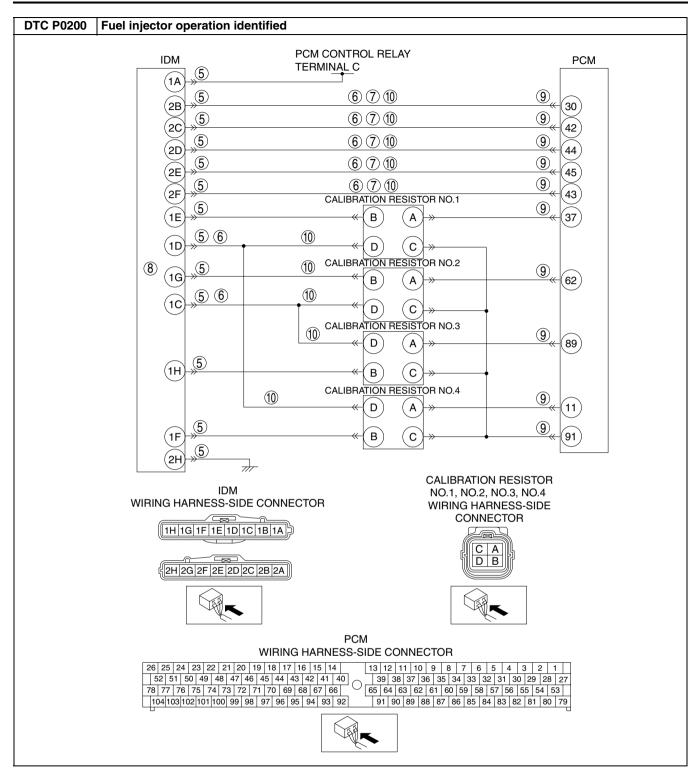

DTC P0193	Fuel pressure sensor circuit high input		
DETECTION CONDITION	 The PCM monitors the input voltage from the fuel pressure sensor while the engine is running. If the input voltage from the fuel pressure sensor is more than 4.86 V, the PCM determines that there is a malfunction in the fuel pressure sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		
POSSIBLE CAUSE	 Fuel pressure sensor malfunction Connector or terminal malfunction Fuel pressure sensor power and signal circuits are shorted to each other. Short to power supply in wiring between fuel pressure sensor terminal B and PCM terminal 61 Open circuit in wiring between fuel pressure sensor terminal A and PCM terminal 91 PCM malfunction

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Information availability. 	Yes	Perform repair or diagnosis according to the availableService Information.If the vehicle is not repaired, go to the next step.
	 Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT FUEL PRESSURE SENSOR	Yes	Repair or replace the suspected terminal, go to Step 9.
	CONNECTOR FOR POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
5	INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY	Yes	Repair or replace harness for short with each other, go to Step 9.
	 Turn the engine switch to the ON position (Engine off). Measure the voltage between fuel pressure sensor terminal B (wiring harness-side) and body GND Is the voltage more than 4.86 V 	No	Go to the next step.
6	INSPECT FUEL TEMPERATURE SENSOR	Yes	Repair the supply pump, go to Step 9.
	Inspect the fuel temperature sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 9.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT FUEL PRESSURE SENSOR FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between fuel pressure sensor terminal A and PCM terminal 91. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0193	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	VERIFY AFTER REPAIR PROCEDUREPerform the Repair Verification Drive Mode.	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0200

DTC P0200	B6E407000200101
DTC P0200	Fuel injector operation identified
DETECTION CONDITION	 The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for unspecified cylinder normally, the PCM determines that the unspecified cylinder fuel injector operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 2B and PCM terminal 30 Short to GND in wiring harness between IDM terminal 2C and PCM terminal 42 Short to GND in wiring harness between IDM terminal 2D and PCM terminal 44 Short to GND in wiring harness between IDM terminal 2E and PCM terminal 45 Short to GND in wiring harness between IDM terminal 2F and PCM terminal D and IDM terminal 1D Short to GND in wiring harness between fuel injector No.1 or No.4 terminal D and IDM terminal 1C Short to GND in wiring harness between fuel injector No.2 or No.3 terminal D and IDM terminal 1C Short to power supply in wiring harness between IDM terminal 2B and PCM terminal 30 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 44 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 42 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 44 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 44 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 44 Short to power supply in wiring harness between IDM terminal 2E and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2B and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2B and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 44 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 44

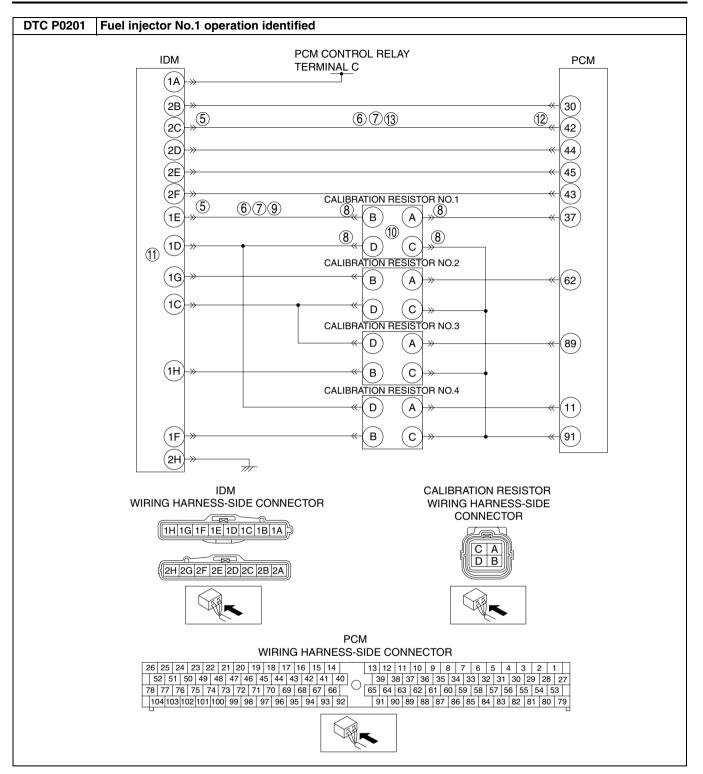

Diagnostic procedure

STEP	ostic procedure INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	
I	RECORDED		Go to the next step.
	Has FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the availableService Information.If the vehicle is not repaired, go to the next step.
	 Verify related Service Information availability. Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
5	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
	DATAIs DTC P0200 on the FREEZE FRAME DATA?	No	Go to troubleshooting procedures for the DTC in the FREEZE FRAME DATA.
5	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 11.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	 INSPECT IDM CIRCUIT FOR SHORT TO GND Turn the engine switch off. 	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 11.
	 Inspect for continuity between the following terminals and body GND: IDM terminal 2B (wiring harness-side) IDM terminal 2C (wiring harness-side) IDM terminal 2D (wiring harness-side) IDM terminal 2E (wiring harness-side) IDM terminal 2F (wiring harness-side) IDM terminal 1D (wiring harness-side) IDM terminal 1C (wiring harness-side) IS there continuity? 	No	Go to the next step.
7	INSPECT IDM FOR SHORT TO POWER SUPPLY	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 11.
	 Turn the engine switch off. Inspect the voltage between following harnesses and body GND: IDM terminal 2B (wiring harness-side) IDM terminal 2C (wiring harness-side) IDM terminal 2D (wiring harness-side) IDM terminal 2E (wiring harness-side) IDM terminal 2F (wiring harness-side) IDM terminal 2F (wiring harness-side) 	No	Go to the next step.
8	INSPECT IDM	Yes	Replace the IDM, then go to Step 11.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 11.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.

STEP	INSPECTION		ACTION
10	INSPECT IDM FOR OPEN CIRCUIT	Yes	Go to the next step.
	 Turn the engine switch off. Inspect for continuity between the following terminals: IDM terminal 2B and PCM terminal 30 IDM terminal 2C and PCM terminal 42 IDM terminal 2D and PCM terminal 44 IDM terminal 2E and PCM terminal 45 IDM terminal 2F and PCM terminal 43 IDM terminal 1D and fuel injector No.1 and No.4 terminal 1C and fuel injector terminal No.2 and No.3 terminal D Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0200	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
12	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC troubleshooting.
	Perform the Repair Verification Drive Mode.		(See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0201

DIC P0201	B6E407000200102
DTC P0201	Fuel injector No.1 operation identified
DETECTION CONDITION	 The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.1 cylinder normally, PCM determines that the fuel injector No.1 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 2C and PCM terminal 42 Short to power supply in wiring harness between IDM terminal 2C and PCM terminal 42 Open circuit in wiring harness between IDM terminal 2C and PCM terminal 42 Fuel injector No.1 malfunction Short to GND in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E Short to power supply in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E Open circuit in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E Open circuit in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E Open circuit in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E Open circuit in wiring harness between fuel injector No.1 terminal B and IDM terminal 1E

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related Service Bulletins and/or on-line	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
	DATA Is DTC P0201 on FREEZE FRAME DATA? 	No	Go to troubleshooting procedures for the DTC in FREEZE FRAME DATA.
5	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	INSPECT IDM FOR SHORT TO GNDTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 14.
	 Inspect continuity between the following connector terminals and body GND. — IDM terminal 2C (wiring harness-side) — IDM terminal 1E (wiring harness-side) Is there continuity? 	No	Go to the next step.
7	INSPECT IDM FOR SHORT TO POWER SUPPLY	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 14.
	 Turn the engine switch to the ON position (Engine off). Inspect the voltage between following terminals and body GND. IDM terminal 2C (wiring harness-side) IDM terminal 1E (wiring harness-side) Is the voltage B+? 	No	Go to the next step.
8	INSPECT FUEL INJECTOR NO.1 CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.1 Turn the engine switch off. Inspect for continuity between IDM terminal 1E (wiring harness-side) and fuel injector No.1 terminal B (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 14.
10	INSPECT FUEL INJECTOR	Yes	Replace fuel injector No.1, then go to Step 14.
	Inspect fuel injector No.1.Is there any malfunction?	No	Go to the next step.
	INSPECT IDM	Yes	Replace the IDM, then go to step 14.
11	Inspect the IDM.	100	

STEP	INSPECTION		ACTION
12	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
13	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND PCM Turn the engine switch off. Inspect for continuity between IDM terminal 2C (wiring harness-side) and PCM terminal 42 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
14	VERIFY TROUBLESHOOTING OF DTC P0201	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
15	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0202

DTC P0202	Fuel injector No.2 operation identified					
DETECTION CONDITION	 The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.2 cylinder normally, the PCM determines that the fuel injector No.2 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 					
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 2F and PCM terminal 43 Short to power supply in wiring harness between IDM terminal 2F and PCM terminal 43 Open circuit in wiring harness between IDM terminal 2F and PCM terminal 43 Fuel injector No.2 malfunction Short to GND in wiring harness between fuel injector No.2 terminal B and IDM terminal 1G Short to power supply in wiring harness between fuel injector No.2 terminal B and IDM terminal 1G Open circuit in wiring harness between fuel injector No.2 terminal B and IDM terminal 1G PCM malfunction

	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
	DATA Is DTC P0202 on FREEZE FRAME DATA? 	No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA.
5	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	 INSPECT IDM FOR SHORT TO GND Turn the engine switch off. 	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 14.
	 Inspect the continuity between the following terminals and body GND. IDM terminal 2F (wiring harness-side) IDM terminal 1G (wiring harness-side) Is there continuity? 	No	Go to the next step.
7	 INSPECT IDM FOR SHORT TO POWER Turn the engine switch to the ON position 	Yes	Repair or replace the wiring harness for a short to power, then go to Step 14.
	 (Engine off). Inspect the voltage between the following terminals and body GND. IDM terminal 2F (wiring harness-side) IDM terminal 1G (wiring harness-side) Is the voltage B+? 	No	Go to the next step.
8	INSPECT FUEL INJECTOR NO.2 CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.2 Turn the engine switch off. Inspect for continuity between IDM terminal 1G (wiring harness-side) and fuel injector No.2 terminal B (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit then go to Step 14.
10	INSPECT FUEL INJECTOR	Yes	Replace fuel injector No.2, then go to Step 14.
	Inspect fuel injector No.2.Is there any malfunction?	No	Go to the next step.
11	INSPECT IDM	Yes	Replace the IDM, then go to step 14.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
12	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.

STEP	INSPECTION		ACTION	
13	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.	
	 AND PCM Turn the engine switch off. Inspect the continuity between IDM terminal 2F (wiring harness-side) and PCM terminal 43 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.	
14	VERIFY TROUBLESHOOTING OF DTC P0202	Yes	Replace the PCM, then go to the next step.	
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.	
15	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)	
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.	

DTC P0203

DTC P0203	Fuel injector No.3 operation identified
DETECTION CONDITION	 The PCM monitors each cylinder's injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.3 cylinder normally, the PCM determines that the fuel injector No.3 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 2D and PCM terminal 44 Short to power supply in wiring harness between IDM terminal 2D and PCM terminal 44 Open circuit in wiring harness between IDM terminal 2D and PCM terminal 44 Fuel injector No.3 malfunction Short to GND in wiring harness between fuel injector No.3 terminal B and IDM terminal 1H Short to power supply in wiring harness between fuel injector No.3 terminal B and IDM terminal 1H Popen circuit in wiring harness between fuel injector No.3 terminal B and IDM terminal 1H PCM malfunction

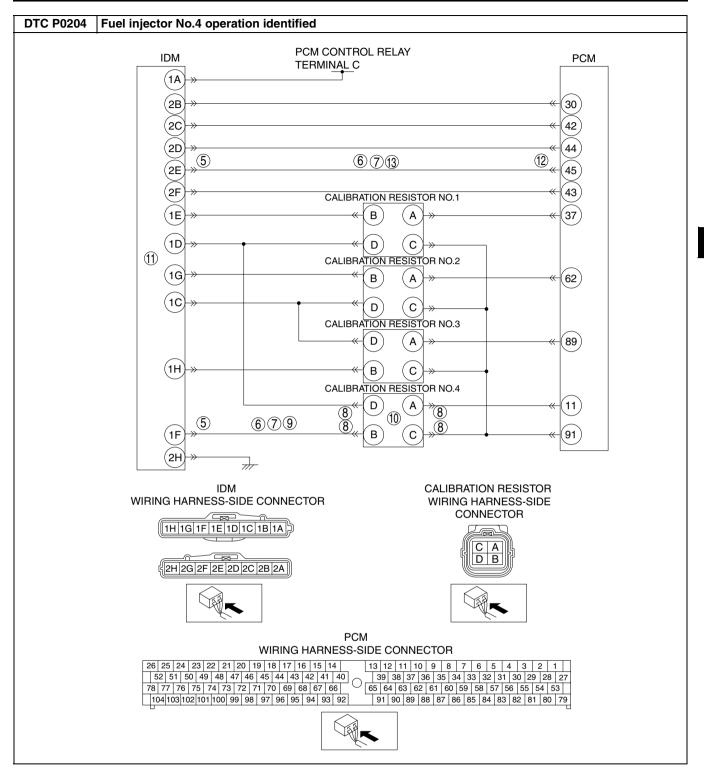

Diagnostic	procedure
------------	-----------

STEP		. <u>, , , , , , , , , , , , , , , , , , ,</u>	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information.
	 Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	No	• If the vehicle is not repaired, go to the next step. Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
5	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
	DATAIs DTC P0203 on the FREEZE FRAME DATA?	No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA.
5	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	INSPECT IDM FOR SHORT TO GNDTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 14.
	 Inspect the continuity between the following terminals and body GND: IDM terminal 2D (wiring harness-side) IDM terminal 1H (wiring harness-side) Is there continuity? 	No	Go to the next step.
7	 INSPECT IDM FOR SHORT TO POWER Turn the engine switch to the ON position 	Yes	Repair or replace the wiring harness for a short to power then go to Step 14.
	 (Engine off). Inspect the voltage between the following terminals and body GND: IDM terminal 2D (wiring harness-side) IDM terminal 1H (wiring harness-side) Is voltage B+? 	No	Go to the next step.
8	INSPECT FUEL INJECTOR NO.3 CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Ste 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.3 Turn the engine switch off. Inspect for continuity between IDM terminal 1H (wiring harness-side) and fuel injector No.3 terminal B (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 14.
10	INSPECT FUEL INJECTOR	Yes	Replace fuel injector No.3, then go to Step 14.
	Inspect fuel injector No.3.Is there any malfunction?	No	Go to the next step.
11	INSPECT IDM	Yes	Replace the IDM, then go to step 14.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
12	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Ste 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.

STEP	INSPECTION		ACTION	
13	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.	
	 AND PCM Turn the engine switch off. Inspect for continuity between IDM terminal 2D (wiring harness-side) and PCM terminal 44 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.	
14	VERIFY TROUBLESHOOTING OF DTC P0203		Replace the PCM, then go to the next step.	
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.	
15	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 		Go to the applicable DTC troubleshooting. (See F2–40 DTC TABLE.)	
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.	

DTC P0204

DTC P0204	Fuel injector No.4 operation identified				
DETECTION CONDITION	 The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.4 cylinder normally, the PCM determines that the fuel injector No.4 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 				
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 2E and PCM terminal 45 Short to power supply in wiring harness between IDM terminal 2E and PCM terminal 45 Open circuit in wiring harness between IDM terminal 2E and PCM terminal 45 Fuel injector No.4 malfunction Short to GND in wiring harness between fuel injector No.4 terminal B and IDM terminal 1F Short to power supply in wiring harness between fuel injector No.4 terminal B and IDM terminal 1F Open circuit in wiring harness between fuel injector No.4 terminal B and IDM terminal 1F PCM malfunction 				

Diagnostic procedure

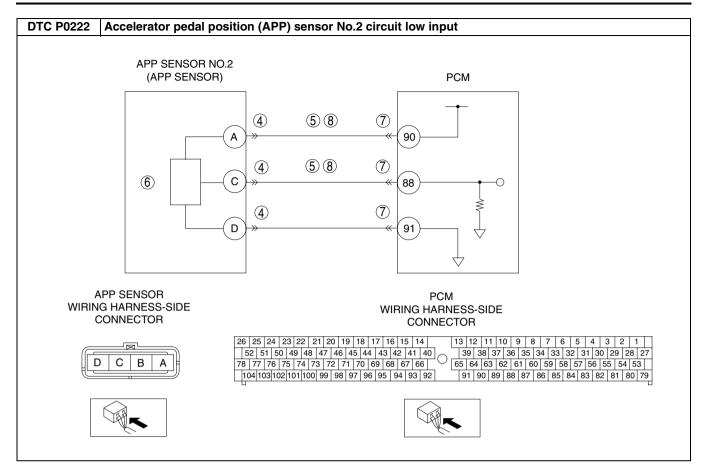

STEP	ostic procedure		ACTION
		V	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information.
	 Verify related Service Bulletins and/or on-line repair information availability. 	No	If the vehicle is not repaired, go to the next step. Go to the next step.
0	Is any related repair information available?	Vee	
3	VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT?	Yes	Go to the next step.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
	DATA Is DTC P0204 on FREEZE FRAME DATA? 	No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA.
5	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	 INSPECT IDM FOR SHORT TO GND Turn the engine switch off. 	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 14.
	 Inspect the continuity between the following terminals and body GND. IDM terminal 2E (wiring harness-side) IDM terminal 1F (wiring harness-side) Is there continuity? 	No	Go to the next step.
7	 INSPECT IDM FOR SHORT TO POWER Turn the engine switch to the ON position 	Yes	Repair or replace the wiring harness for a short to power, then go to Step 14.
	 (Engine off). Inspect the voltage between the following terminals and body GND. IDM terminal 2E (wiring harness-side) IDM terminal 1F (wiring harness-side) Is the voltage B+? 	No	Go to the next step.
8	INSPECT FUEL INJECTOR NO.4 CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.4 Turn the engine switch off. Inspect for continuity between IDM terminal 1F (wiring harness-side) and fuel injector terminal B (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 14.
10	INSPECT FUEL INJECTOR	Yes	Replace fuel injector No.4, then go to Step 14.
	Inspect fuel injector No.4.Is there any malfunction?	No	Go to the next step.
11	INSPECT IDM	Yes	Replace the IDM, then go to step 14.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
12	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 14.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.

STEP	INSPECTION		ACTION
13	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND PCM Turn the engine switch off. Inspect for continuity between IDM terminal 2E (wiring harness-side) and PCM terminal 45 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
14	14 VERIFY TROUBLESHOOTING OF DTC P0204	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
15	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	 (See F2–39 OBD DRIVE MODE.) Are any DTCs present? 	No	Troubleshooting completed.

DTC P0222

DTC P0222 Accelerator pedal position (APP) sensor No.2 circuit low input The PCM monitors the input signal from accelerator pedal position sensor No.2. If the voltage from ٠ accelerator pedal position sensor No.2 is less than 0.3 V, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.2 circuit. DETECTION **Diagnostic support note** CONDITION • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory. • ٠ APP sensor No.2 malfunction Connector or terminal malfunction Open circuit in wiring harness between APP sensor terminal A and PCM terminal 90 • POSSIBLE Short to GND in wiring harness between APP sensor terminal A and PCM terminal 90 ٠ CAUSE Open circuit in wiring harness between APP sensor terminal C and PCM terminal 88 • Short to GND in wiring harness between APP sensor terminal C and PCM terminal 88 ٠ PCM malfunction •

B6F407000200106

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	
	 Verify related service repair information availability. 	No	If the vehicle is not repaired, go to the next step. Go to the next step.
	Is any related repair information available?		·
3	VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT?	Yes	Go to the next step.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT APP SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
	 POOR CONNECTION Turn the engine switch off. Disconnect the APP sensor connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT APP SENSOR NO.2 CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: APP sensor terminal A (wiring harness-side) and body GND APP sensor terminal C (wiring harness-side) and body GND Is there continuity? 	No	Go to the next step.
6	INSPECT APP SENSOR NO.2	Yes	Replace the APP sensor, then go to Step 9.
	Inspect the APP sensor No.2.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT APP SENSOR NO.2 CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between the following terminals: APP sensor terminal A (wiring harness-side) and PCM terminal 90 (wiring harness-side) APP sensor terminal C (wiring harness-side) and PCM terminal 88 (wiring harness-side) Is there continuity? 	No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0222	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0223

DIC F0223	B6E407000200107			
DTC P0223	Accelerator pedal position (APP) sensor No.2 circuit high input			
DETECTION CONDITION	 The PCM monitors the input signal from accelerator pedal position sensor No.2. If the voltage from accelerator pedal position sensor No.2 is more than 4.7 V, the PCM determines that there is a malfunction in the accelerator pedal position sensor No.2 circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 			
POSSIBLE CAUSE	 APP sensor No.2 malfunction Connector or terminal malfunction Short to power supply in wiring harness between APP sensor terminal C and PCM terminal 88 Open circuit in wiring harness between APP sensor terminal D and PCM terminal 91 PCM malfunction

Replace the PCM, then go to the next step.
_	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using 	No Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step.
_	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. 	No Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step.
_	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. 	No Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step.
9	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No Yes No	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step. Go to the next step.
_	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step. Go to the next step. Go to the applicable DTC inspection.
9	 Is there any malfunction? INSPECT APP SENSOR NO.2 GND CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between APP sensor terminal D (wiring harness-side) and PCM terminal 91 (wiring harness-side). Is there continuity? VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No Yes No	Repair or replace the wiring harness for a possible open circuit, then go to the next step. Replace the PCM, then go to the next step. Go to the next step.

DTC P0225 B6E407000200108 **DTC P0225** Idle switch circuit malfunction The PCM monitors the input signals from the accelerator pedal position sensor and the idle switch. If the • idle switch is off even if the voltage from the accelerator pedal position sensor is less than 0.75 V, the PCM determines that there is a malfunction in the idle switch circuit. Diagnostic support note DETECTION The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or CONDITION in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. ٠ DTC is stored in the PCM memory. • Idle switch malfunction • Connector or terminal malfunction • POSSIBLE Open circuit in wiring harness between idle switch terminal B and GND CAUSE Open circuit in wiring harness between idle switch terminal A and PCM terminal 31 • • PCM malfunction **IDLE SWITCH** PCM \bigcirc (4) (8) 31 А 6 (5) (4) в 7/7 PCM WIRING HARNESS-SIDE **IDLE SWITCH WIRING** CONNECTOR HARNESS-SIDE 26 25 24 23 22 21 20 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 52 51 50 49 48 47 46 45 44 43 42 41 40 39 38 37 36 35 34 33 32 31 30 29 28 27 78 77 76 75 74 73 72 71 70 69 68 67 66 64 63 62 61 60 59 58 57 56 55 54 53 CONNECTOR в А 104 103 102 101 100 99 98 97 96 95 94 93 92 91 90 89 88 87 86 85 84 83 82 81 80 79

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT IDLE SWITCH CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 9.
	 POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IDLE SWITCH GND CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between idle switch terminal B and body GND. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	INSPECT IDLE SWITCHInspect the idle switch.	Yes	Replace the accelerator pedal component, then go to Step 9.
	 Is there any malfunction? 	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 9.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT IDLE SWITCH SIGNAL CIRCUIT FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between idle switch terminal A and PCM terminal 31. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P0225	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304

B6E407000300101 **DTC P0301** Cylinder No.1 misfire detection Cylinder No.2 misfire detection **DTC P0302 DTC P0303** Cylinder No.3 misfire detection **DTC P0304** Cylinder No.4 misfire detection The PCM monitors the CKP sensor input signal interval time. The PCM calculates the deviation of the • interval time for each cylinder. If the deviation of the interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can affect emission performance, has DETECTION occurred. CONDITION **Diagnostic support note** The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. . FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory. • • Fuel injector malfunction CKP sensor malfunction ٠ POSSIBLE CMP sensor malfunction ٠ CAUSE Inadequate engine compression due to engine internal malfunction ٠ Related connector or terminal malfunction • ٠ Related wiring harness malfunction

Diagnostic	procedure
------------	-----------

VERIFY FREEZE FRAME DATA HAS BEEN	Vee	
	Yes	Go to the next step.
 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	No	Go to the next step.
VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
DATA Is DTC P0301, P0302, P0303 or P0304 on FREEZE FRAME DATA? 	No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA.
INSPECT FUEL LINETurn the engine switch off.	Yes	Repair or replace the suspected fuel line, then go to Step 13.
for fuel leakage or clogging.	No	Go to the next step.
UNDER TROUBLESHOOTING CONDITION	Yes	Inspect the suspected circuit or part or both according to the inspection results. Then go to Step 13.
 equivalent. Is any signal that is far out of specification when the engine switch is at the ON position and the engine idles? 	No	Go to the next step.
UNDER TROUBLE CONDITION	Yes	Inspect suspected circuit or part or both according to the inspection results. Then go to Step 13.
simulating the FREEZE FRAME DATA condition.Is there any signal which cause drastic changes?	No	Go to the next step.
INSPECT CKP SENSORInspect the CKP sensor and the pulse wheel.	Yes	inspection results, then go to Step 13.
-	No	Go to the next step.
Inspect the CMP sensor.	Yes	Repair or replace the suspected part according to the inspection results, then go to Step 13.
-	No	Go to the next step.
ENGINE COOLANT LEAKAGEPerform the engine coolant leakage inspection.		Repair or replace the malfunctioning part according to th inspection results. Then go to Step 13.
	No	Go to the next step.
	Yes	Go to the next step.
suspected cylinder.	No	Overhaul the engine, then go to Step 13.
 INSPECT FUEL INJECTOR Inspect the fuel injector and the related circuit for the suspected cylinder. Is there any malfunction? 	Yes	Repair or replace the suspected part according to the inspection results, then go to the next step.
	No	Go to the next step.
	 AVAILABILITY Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA Is DTC P0301, P0302, P0303 or P0304 on FREEZE FRAME DATA? INSPECT FUEL LINE Turn the engine switch off. Inspect the fuel lines of the suspected cylinder for fuel leakage or clogging. VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLESHOOTING CONDITION Access the BOO, ECT, IAT, MAF, RPM, APP, EGR PS and VSS PIDs using the WDS or equivalent. Is any signal that is far out of specification when the engine switch is at the ON position and the engine idles? VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION Inspect the same PIDs as in Step 6 while simulating the FREEZE FRAME DATA condition. Is there any signal which cause drastic changes? INSPECT CMP SENSOR Inspect the CKP sensor and the pulse wheel. Is there any malfunction? INSPECT ENGINE COOLANT PASSAGE FOR ENGINE COOLANT PASSAGE FOR ENGINE COOLANT LEAKAGE Perform the engine coolant leakage inspection. Is there any malfunction? <l< td=""><td>AVAILABILITY Verify related Service Bulletins and/or on-line repair information availability. No Is any related repair information available? Yes VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? No Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Yes Start the engine. Is the same DTC present? No IDENTIFY TRIGGER DTC FOR FREEZE FRAME PATA? No ISPECT FUEL LINE Yes Turn the engine switch off. Inspect the fuel lines of the suspected cylinder for fuel leakage or clogging. No VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLESHOOTING CONDITION Yes Access the BOO, ECT, IAT, MAF, RPM, APP, EGR PS and VSS PIDs using the WDS or equivalent. No Is any signal that is far out of specification when the engine switch is at the ON position and the engine idles? Yes VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION No Inspect the Same PIDs as in Step 6 while simulating the FREEZE FRAME DATA condition. No Is there any signal which cause drastic changes? No INSPECT CKP SENSOR Yes Inspect the COLANT PASSAGE FOR Yes Inspect the COLANT LEAKAGE Yes <t< td=""></t<></td></l<>	AVAILABILITY Verify related Service Bulletins and/or on-line repair information availability. No Is any related repair information available? Yes VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? No Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Yes Start the engine. Is the same DTC present? No IDENTIFY TRIGGER DTC FOR FREEZE FRAME PATA? No ISPECT FUEL LINE Yes Turn the engine switch off. Inspect the fuel lines of the suspected cylinder for fuel leakage or clogging. No VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLESHOOTING CONDITION Yes Access the BOO, ECT, IAT, MAF, RPM, APP, EGR PS and VSS PIDs using the WDS or equivalent. No Is any signal that is far out of specification when the engine switch is at the ON position and the engine idles? Yes VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION No Inspect the Same PIDs as in Step 6 while simulating the FREEZE FRAME DATA condition. No Is there any signal which cause drastic changes? No INSPECT CKP SENSOR Yes Inspect the COLANT PASSAGE FOR Yes Inspect the COLANT LEAKAGE Yes <t< td=""></t<>

STEP	INSPECTION		ACTION
13	VERIFY TROUBLESHOOTING OF MISFIRE DTC	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
14	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0336

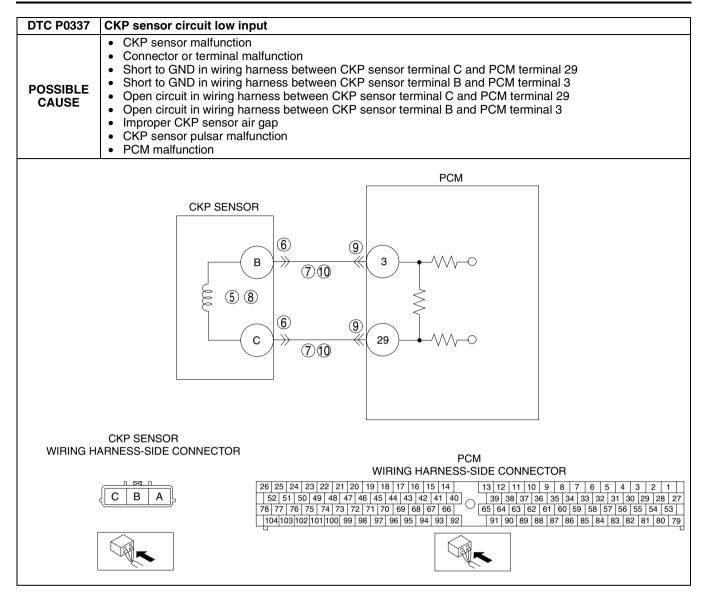

DIC P0336	B6E407000300102
DTC P0336	CKP sensor range/performance problem
DETECTION CONDITION	 The PCM monitors the input signal from the CKP sensor while the engine is running. If the input signal from the CKP sensor does not correspond with the proper pulse number, the PCM determines CKP sensor performance problem. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 CKP sensor malfunction Connector or terminal malfunction CKP sensor pulsar malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Information availability. 	Yes	Perform repair or diagnosis according to the availableService Information.If the vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	 VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	Yes No	Go to the next step. Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CKP SENSOR PULSAR	Yes	Replace the CKP sensor pulsar, then go to Step 8.
	Inspect the CKP sensor pulsar for damage and/or cracks.Is there any malfunction?	No	Go to the next step.
5	INSPECT CKP SENSOR CONNECTOR FOR	Yes	Repair or replace the suspected terminal, go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	INSPECT CKP SENSOR	Yes	Replace the CKP sensor, go to Step 8.
	Inspect the CKP sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0336	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0337

DIC F0337	B6E407000300103	
DTC P0337	CKP sensor circuit low input	
DETECTION CONDITION	 The PCM monitors the input signal from the CKP sensor and the CMP sensor while the engine is running. If the input signal from the CKP sensor is not input while the PCM detects 28 pulses from the CMP sensor, the PCM determines that there is a malfunction in the CKP sensor circuit. Diagnostic support note 	
CONDITION	 The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 	

Diagnostic	procedure
------------	-----------

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Service Information.
	 Verify related Service Information availability. 		If the vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CKP SENSOR AIR GAP	Yes	Go to the next step.
	 Measure the CKP sensor air gap. Is the CKP sensor air gap normal? Specification 1.5—2.5 mm {0.059—0.098 in} 	No	Replace the CKP sensor, then go to Step 11.
5	INSPECT CKP SENSOR PULSAR	Yes	Replace the CKP sensor pulsar, then go to Step 11.
	 Inspect the CKP sensor pulsar for damage and/or cracks. Is there any malfunction? 	No	Go to the next step.
6	INSPECT CKP SENSOR CONNECTOR FOR	Yes	Repair or replace the suspected terminal, go to Step 11.
Ū	POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
7	INSPECT CKP SENSOR FOR SHORT TO GNDTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to GND, go to Step 11.
	 Inspect for continuity between the following terminals and body GND: — CKP sensor terminal B and body GND — CKP sensor terminal C and body GND Is there continuity? 	No	Go to the next step.
8	INSPECT CKP SENSOR	Yes	Replace the CKP sensor, go to Step 11.
	Inspect the CKP sensor.Is there any malfunction?	No	Go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 11.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
10	INSPECT CKP SENSOR FOR OPEN CIRCUIT	Yes	•
	 Turn the engine switch off. Inspect for continuity between the following terminals: CKP sensor terminal B and PCM terminal 3 CKP sensor terminal C and PCM terminal 29 Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, go to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0337	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine and idle it. Is the same DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
12	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0341

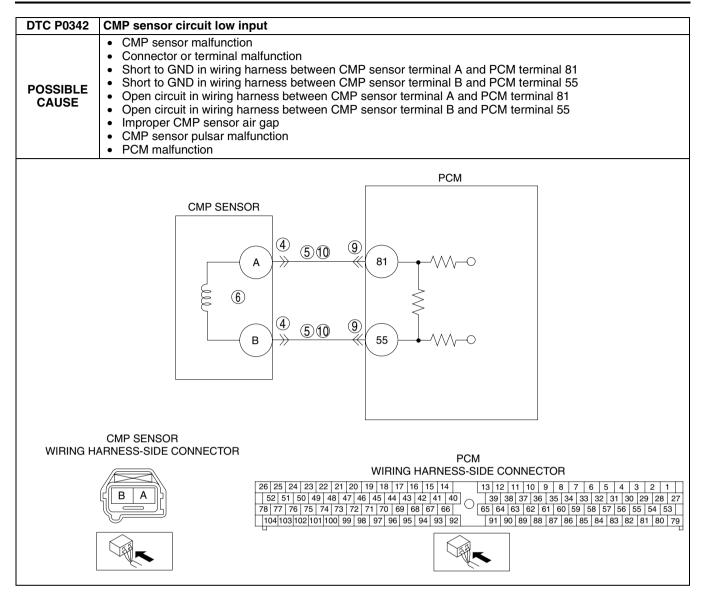

DTC P0341	CMP sensor range/performance problem
DETECTION CONDITION	 The PCM monitors the input signal from the CMP sensor while the engine is running. If the input signal from the CMP sensor does not correspond with the proper pulse number, the PCM determines CMP sensor performance problem. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 CMP sensor malfunction Connector or terminal malfunction CMP sensor pulsar malfunction PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related Service Information availability.	Yes	 Perform repair or diagnosis according to the available Service Information. If the vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	 VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	Yes No	Go to the next step. Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CMP SENSOR CONNECTOR FOR	Yes	Repair or replace the suspected terminal, go to Step 8.
	 POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT CMP SENSOR	Yes	Replace the CMP sensor, go to Step 8.
	Inspect the CMP sensor.Is there any malfunction?	No	Go to the next step.
6	INSPECT CMP SENSOR PULSAR	Yes	Replace the camshaft, then go to Step 8.
	Inspect the CMP sensor pulsar for damage and/or cracks.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0341	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0342

DIC F0342	B6E407000300105	
DTC P0342	CMP sensor circuit low input	
	 The PCM monitors the input signal from the CMP sensor and the CKP sensor while the engine is running. If the input signal from the CMP sensor is not input while the PCM detects 255 pulses from the CKP sensor, the PCM determines that there is a malfunction in the CMP sensor circuit. Diagnostic support note 	
CONDITION	 The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 	

Diagnostic	procedure
------------	-----------

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Service Information.
	Verify related Service Information availability.		If the vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CMP SENSOR CONNECTOR FOR	Yes	Repair or replace the suspected terminal, go to Step 11.
•	POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
5	INSPECT CMP SENSOR CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 11.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: CMP sensor terminal A and body GND. CMP sensor terminal B and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT CMP SENSOR	Yes	Replace the CMP sensor, go to Step 11.
	Inspect the CMP sensor.Is there any malfunction?	No	Go to the next step.
7	INSPECT CMP SENSOR AIR GAP	Yes	Go to the next step.
	 Measure the CMP sensor air gap. Is the CMP sensor air gap normal? Specification 0.5—1.5 mm {0.020—0.059 in} 	No	Replace the CMP sensor, then go to Step 11.
8	INSPECT CMP SENSOR PULSAR	Yes	Replace the camshaft, then go to Step 11.
	 Inspect the CMP sensor pulsar for damage and/or cracks. Is there any malfunction? 	No	Go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 11.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
10	INSPECT CMP SENSOR FOR OPEN CIRCUIT	Yes	Go to the next step.
10	Turn the engine switch off.	No	Repair or replace the wiring harness for an open circuit, go
	 Inspect for continuity between the following terminals: — CMP sensor terminal A and PCM terminal 81. — CMP sensor terminal B and PCM terminal 55. Is there continuity? 		to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0342	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine and idle it. Is the same DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
12	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P0401

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	 The PCM monitors the difference between the target air amount and intake air amount while the EGR system is operating. If the difference between the target air amount and the intake air amount is less than the threshold, the PCM determines that there is a malfunction in the EGR system. Diagnostic support note MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. FREEZE FRAME DATA is available. DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Vacuum hose malfunction EGR valve malfunction EGR boost sensor malfunction EGR gasket malfunction PCM malfunction

Diagnostic	procedure
------------	-----------

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record FREEZE FRAME DATA on repair order, then go to
	Has FREEZE FRAME DATA been recorded?		the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	Verify related service bulletins and/or on-line		If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?	No	Go to the next step.
3	INSPECT FOR OTHER DTCS	Yes	Repair the circuit malfunction for the applicable DTCs.
5	Connect the WDS or equivalent to the DLC-2.	No	Go to the next step.
	 Clear the DTC from the PCM memory using 	INO	Go to the next step.
	the WDS or equivalent.		
	 Turn the engine switch to the ON position. 		
	(Engine off).Have other DTCs been stored?		
4	Have other DTCs been stored? INSPECT VACUUM HOSE CONDITION	Yes	Replace the vacuum hoses, then go to Step 8.
4	 Inspect the vacuum hoses for clogging, 	No	Go to the next step.
	damage, freezing, or vacuum leakage.	INO	Go to the next step.
	 Is there any malfunction? 		
5	INSPECT EGR VALVE MALFUNCTION	Yes	Go to the next step.
	Inspect the EGR valve.	No	Replace the EGR valve, then go to Step 8.
	Is the EGR valve okay?		-
6	INSPECT EGR BOOST SENSOR	Yes	Go to the next step.
	MALFUNCTION	No	Replace the EGR boost sensor, then go to Step 8.
	Inspect the EGR boost sensor.Is the EGR boost sensor okay?		
7	INSPECT EGR VALVE PASSAGE	Yes	Go to the next step.
	Turn the engine switch off.	No	Install the gasket correctly, then go to the next step.
	Remove the EGR valve.	-	
	Is gasket installation normal?		-
8	VERIFY TROUBLESHOOTING OF DTC P0401	Yes	Go to the next step.
	COMPLETED Make sure to reconnect all disconnected	No	Replace the PCM, then go to the next step.
	 Make sure to reconnect an disconnected connectors. 		
	 Connect the WDS or equivalent to the DLC-2. 		
	Clear the DTC from the PCM memory using		
	the WDS or equivalent.		
	Perform the Repair Verification Drive Mode. (See F2, 20 OPD DRIVE MODE.)		
	(See F2–39 OBD DRIVE MODE.) Is the PENDING CODE for this DTC present?		
9	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
Ŭ	Are any DTCs present?	103	(See F2-40 DTC TABLE.)
		No	Troubleshooting completed.
			i reasiceireeting oomploteet.

DTC P0402

DTC P0402	EGR flow excessive detected
	• The PCM monitors the difference between the target air amount and intake air amount while the EGR system is operating. If the difference between the target air amount and the intake air amount is more than the threshold, the PCM determines that there is a malfunction in the EGR system. Diagnostic support note
DETECTION CONDITION	 The MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	The EGR valve gasket is not installed.The EGR valve gasket has been damaged.PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	 Has FREEZE FRAME DATA been recorded? 		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	 Verify related service bulletins and/or on-line 	No	• If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?		Go to the next step.
3	INSPECT FOR OTHER DTCS	Yes	Repair circuit malfunction for the applicable DTCs.
0	• Turn the engine switch to the ON position.	No	Go to the next step.
	(Engine off).	NO	
	 Have other DTCs been stored? 		
4	INSPECT EGR VALVE GASKET HAS	Yes	Go to the next step.
	INSTALLED	No	Install the EGR valve gasket, then go to Step 6.
	Turn the engine switch off.		
	Remove the EGR valve.Is the EGR valve gasket installed?		
5	INSPECT EGR VALVE GASKET MALFUNCTION	Yes	Replace the EGR valve gasket, then next step.
Ũ	 Inspect if there is any crack or damage on the 	No	Go to the next step.
	EGR valve gasket?	NO	do to the next step.
6	VERIFY TROUBLESHOOTING OF DTC P0402	Yes	Go to the next step.
	COMPLETED	No	Replace the PCM, then go to the next step.
	Make sure to reconnect all disconnected		
	connectors.Connect the WDS or equivalent to the DLC-2.		
	 Clear the DTC from the PCM memory using 		
	the WDS or equivalent.		
	 Perform the Repair Verification Drive Mode. 		
	(See F2-39 OBD DRIVE MODE.)		
	Is the PENDING CODE for this DTC present?	N.	On the the combined in DTO is an action
7		Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	Are any DTCs present?	No	Troubleshooting completed.
		INU	

DTC P0404

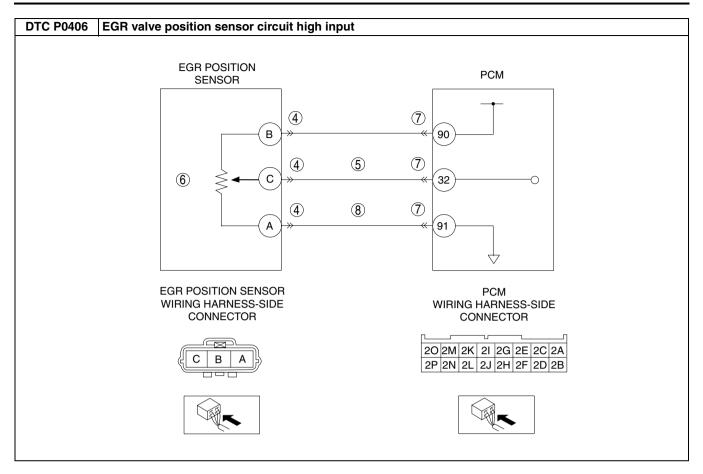

DTC P0404	EGR valve stuck
DETECTION CONDITION	 The PCM monitors the input signal from the EGR valve position sensor while the EGR system is operating. If the output voltage difference is less than threshold when the EGR flow amount changes, the PCM determines that there is a malfunction in the EGR valve. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	EGR valve malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. 	Yes No	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step. Go to the next step.
3	Is any related repair information available? VERIFY CURRENT SIGNAL STATUS: IS	Yes	Co to the pout stop
5	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Perform the Drive Mode. (See F2-39 OBD DRIVE MODE.) Is the PENDING CODE for this DTC present? 	No	Go to the next step. Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT EGR VALVE	Yes	Replace the EGR valve, then go to Step the next step.
	Inspect the EGR valve.Is there any malfunction?	No	Go to the next step.
5	VERIFY TROUBLESHOOTING OF DTC P0404	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Perform the Repair Verification Drive Mode. (See F2-39 OBD DRIVE MODE.) Is the PENDING CODE for this DTC present? 	No	Go to the next step.
6	VERIFY AFTER REPAIR PROCEDUREAre any DTCs present?	Yes	(See F2-40 DTC TABLE.)
		No	DTC troubleshooting completed.

DTC P0406

DTC P0406	EGR valve position sensor circuit high input		
DETECTION CONDITION	 The PCM monitors the input signal from the EGR valve position sensor. If the voltage from the EGR valve position sensor is more than 4.75 V, the PCM determines that there is a malfunction in the EGR valve position sensor circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		
POSSIBLE CAUSE	 EGR valve position sensor malfunction Connector or terminal malfunction Short to power supply in wiring harness between EGR valve position sensor terminal C and PCM terminal 32 Open circuit in wiring harness between EGR valve position sensor terminal A and PCM terminal 91 PCM malfunction 		

Diagnostic procedure

	 Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Perform the Repair Verification Drive Mode. (See F2-39 OBD DRIVE MODE.) Is the PENDING CODE for this DTC present? 		
9	VERIFY AFTER REPAIR PROCEDUREAre any DTCs present?	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)

B6E407000500101

DTC P0500	Vehicle speed signal
DETECTION CONDITION	 The PCM monitors the CAN input signal from DSC HU/CM. If the input signal is not correct, the PCM determines that there is a CAN input signal. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	DSC HU/CM malfunction PCM malfunction

Diagnostic procedure

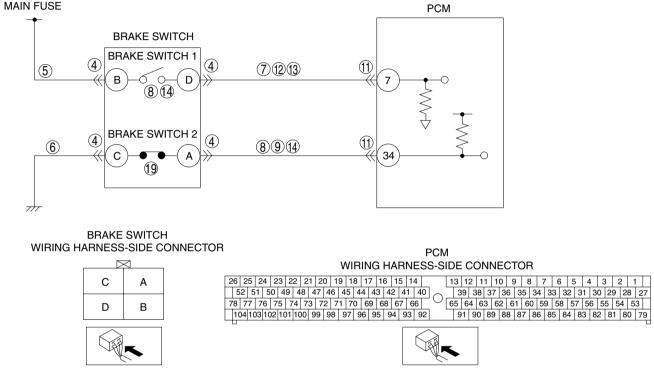

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes No	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step. Go to the next step.
3	VERIFY CURRENT INPUT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? • Connect the WDS or equivalent to the DLC-2.	Yes	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
	 Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
4	INSPECT DSC HU/CMInspect the DSC HU/CM.	Yes	Repair or replace the malfunctioning part, then go to the next step.
	 Is there any malfunction? 	No	Go to the next step.
5	VERIFY TROUBLESHOOTING OF DTC P0500	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE same as the DTC present? 	No	Go to the next step.
6	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

DTC P0504

DTC P0504	Brake switch signal correlation malfunction
DETECTION CONDITION	 The PCM monitors the input signal from brake switch 1 and brake switch 2 while the engine is running. The PCM determines the brake switch signal correlation malfunction if the input signal from brake switch 1 brake switch 2 is as follows: Brake switch 1 is on and brake switch 2 is off. Brake switch 1 is off and brake switch 2 is on. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.

DTC P0504	Brake switch signal correlation malfunction
POSSIBLE CAUSE	 Brake switch malfunction Connector or terminal malfunction Open circuit in wiring harness between main fuse and brake switch terminal B Open circuit in wiring harness between brake switch terminal D and PCM terminal 7 Short to power circuit in wiring harness between brake switch terminal D and PCM terminal 7 Open circuit in wiring harness between brake switch terminal C and GND Short to GND in wiring harness between brake switch terminal A and PCM terminal 34 Open circuit in wiring harness between brake switch terminal A and PCM terminal 34 Short to GND in wiring harness between brake switch terminal A and PCM terminal 34 Short to GND in wiring harness between brake switch terminal D and PCM terminal 34 Short to power circuit in wiring harness between brake switch terminal D and PCM terminal 34 PCM malfunction

MAIN FUSE

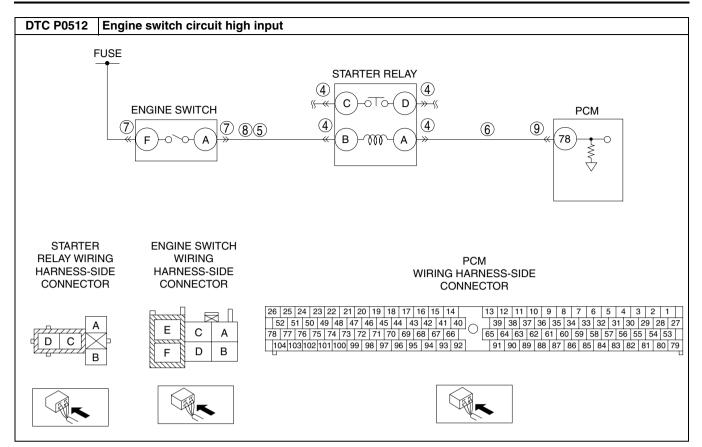

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available Service Information.
	Check for related Service Information availability.	No	If the vehicle is not repaired, go to the next step. Go to the next step.
-	Is any related repair information available?		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT BRAKE SWITCH CONNECTOR FOR	Yes	Repair or replace the suspected terminal, go to Step 15.
	 POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT BRAKE SWITCH 1 POWER SUPPLY	Yes	Go to the next step.
	 CIRCUIT FOR OPEN Turn the engine switch to the ON position (Engine off). Inspect the voltage between brake switch terminal B and body GND. Is the voltage B+? 	No	Repair or replace the wiring harness for an open, go to Step 15.
6	INSPECT BRAKE SWITCH 2 GND CIRCUIT FOR	Yes	Go to the next step.
	 OPEN Turn the engine switch off. Inspect for continuity between brake switch terminal C and body GND. Is there continuity? 	No	Repair or replace the wiring harness for an open, go to Step 15.
7	INSPECT BRAKE SWITCH 1 SIGNAL CIRCUIT	Yes	Go to the next step.
	 FOR SHORT TO POWER Turn the engine switch to the ON position (Engine off). Inspect the voltage between brake switch terminal D and body GND. Is the voltage less than 1.0 V? 	No	Repair or replace the wiring harness for a short to power supply, go to Step 15.
8	INSPECT BRAKE SWITCH 2 SIGNAL CIRCUIT FOR OPEN	Yes	Repair or replace the wiring harness for an open circuit, go to Step 15.
	 Turn the engine switch to the ON position (Engine off). Inspect the voltage between brake switch terminal A and body GND. Is the voltage less than 1.0 V? 	No	Go to the next step.
9	INSPECT BRAKE SWITCH 2 SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 15.
	 Turn the engine switch off. Inspect for continuity between brake switch terminal A and body GND. Is there continuity? 	No	Go to the next step.
10	INSPECT BRAKE SWITCH	Yes	Replace the brake switch, go to Step 15.
	Inspect brake switch.Is there any malfunction?	No	Go to the next step.
11	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 15.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.

STEP	INSPECTION		ACTION
12	INSPECT BRAKE SWITCH 1 SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 15.
	 Turn the engine switch off. Inspect for continuity between brake switch terminal D and body GND. Is there continuity? 	No	Go to the next step.
13	INSPECT BRAKE SWITCH 1 SIGNAL CIRCUIT	Yes	Go to the next step.
	 FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between brake switch terminal D and PCM terminal 7. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, go to Step 15.
14	INSPECT BRAKE SWITCH 2 SIGNAL CIRCUIT FOR SHORT TO POWER	Yes	Repair or replace the wiring harness for a short to power supply, go to the next step.
	 Turn the engine switch to the ON position (Engine off). Inspect the voltage between brake switch terminal D and body GND. Is the voltage B+? 	No	Go to the next step.
15	 VERIFY TROUBLESHOOTING OF DTC P0504 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Depress and release the brake pedal for 10 times. Is the same DTC present? 	Yes	Replace the PCM, go to the next step.
		No	Go to the next step.
16	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0512

DTC P0512	Engine switch circuit high input			
DETECTION CONDITION	 The PCM monitors the engine speed and the starter signal. If the engine speed is more than 700 rpm and the starter switch ON signal is input, the PCM determines that there is a malfunction in the starter switch circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 			
POSSIBLE CAUSE	 Engine switch malfunction Starter relay malfunction Connector or terminal malfunction Short to power supply in wiring harness between starter relay terminal A and PCM terminal 78 Short to power supply in wiring harness between engine switch terminal A and starter relay terminal B PCM malfunction 			

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.
	 Verify related service repair information 		• If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	Is any related repair information available?		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using 	No	Intermittent concern exists.
			Perform the "INTERMITTENT CONCERNS
	the WDS or equivalent.		TROUBLESHOOTING".
	Start the engine.		
	 Is the same DTC present? 		
4	INSPECT STARTER RELAY CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 10.
	POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. 	110	
	 Inspect for poor connection (such as damaged/ 		
	pulled-out terminals, corrosion).		
	Is there any malfunction?		
5	DETERMINE IF MALFUNCTION IS IN ENGINE	Yes	Go to Step 7.
	SWITCH SIDE OR STARTER RELAY SIDE	No	Go to the next step.
	 Turn the engine switch to the ON position 		
	(Engine off).Measure the voltage between starter relay		
	terminal B and body GND.		
	 Is the voltage B+? 		
6	DETERMINE IF MALFUNCTION IS IN STARTER	Yes	Go to Step 9.
-	RELAY OR PCM SIDE	No	Inspect the starter relay, then go to Step 10.
	 Turn the engine switch to the ON position 	110	hopeor the starter relay, then go to stop rel
	(Engine off).		
	Measure the voltage between starter relay		
	terminal A and body GND.		
7	Is the voltage B+?	Vee	Densir as replace the terminal, then as to Stan 10
7	INSPECT ENGINE SWITCH CONNECTOR FOR POOR CONNECTION Turn the engine switch off. 	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
	 Inspect for poor connection (such as damaged/ 		
	pulled-out terminals, corrosion).		
	 Is there any malfunction? 		
8	INSPECT ENGINE SWITCH SIGNAL CIRCUIT	Yes	Repair or replace the wiring harness for a short to power
	FOR SHORT TO POWER SUPPLY		supply, then go to Step 10.
	 Turn the engine switch to the ON position 	No	Inspect engine switch, then go to Step 10.
	(Engine off).		
	Measure the voltage between engine switch		
	terminal A and body GND.		
	Is the voltage B+?		
0	Is the voltage B+?	Voc	Repair or replace the terminal, then do to the payt stop
9	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes No	Repair or replace the wiring harness for a short to power
9	INSPECT PCM CONNECTOR FOR POOR CONNECTION • Turn the engine switch off.		Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal
9	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). 		Repair or replace the wiring harness for a short to power
9	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ 		Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal
9	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). 		Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal
_	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal 78, then go to the next step. Replace the PCM, then go to the next step.
_	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? VERIFY TROUBLESHOOTING OF DTC P0512 	No Yes	Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal 78, then go to the next step.
_	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? VERIFY TROUBLESHOOTING OF DTC P0512 COMPLETED Make sure to reconnect all disconnected connectors. 	No Yes	Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal 78, then go to the next step. Replace the PCM, then go to the next step.
_	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/pulled-out terminals, corrosion). Is there any malfunction? VERIFY TROUBLESHOOTING OF DTC P0512 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using 	No Yes	Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal 78, then go to the next step. Replace the PCM, then go to the next step.
_	 INSPECT PCM CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? VERIFY TROUBLESHOOTING OF DTC P0512 COMPLETED Make sure to reconnect all disconnected connectors. 	No Yes	Repair or replace the wiring harness for a short to power supply between starter relay terminal A and PCM terminal 78, then go to the next step. Replace the PCM, then go to the next step.

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Is there any DTC present?	No	Troubleshooting completed.

DTC P0562

	B6E40700050010
DTC P0562	Battery voltage low input
DETECTION CONDITION	 The PCM monitors the battery voltage. If the battery voltage is less than 8 V, the PCM determines that there is a malfunction in the battery and the battery signal system. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Generator malfunction Terminal malfunction PCM malfunction
	GENERATOR PCM
	5 B B T BATTERY BATTERY
WIRING	PCM HARNESS-SIDE DNNECTOR PCM WIRING HARNESS-SIDE CONNECTOR 26 25 24 23 22 21 20 19 18 17 16 13 12 11 10 9 8 7 6 5 4 3 2 1 Image: Second Secon

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes No	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step. Go to the next step.
3	 VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	Yes No	Go to the next step. Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	 INSPECT GENERATOR TERMINAL FOR POOR INSTALLATION Turn the engine switch off. Inspect generator terminal B for looseness. Is there any malfunction? 	Yes No	Connect generator terminal B correctly, then go to Step 6. Go to the next step.
5	INSPECT GENERATOR Inspect the generator.	Yes No	Replace the generator, then go to the next step. Go to the next step.
6	Is there any malfunction? VERIFY TROUBLESHOOTING OF DTC P0562	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
7	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

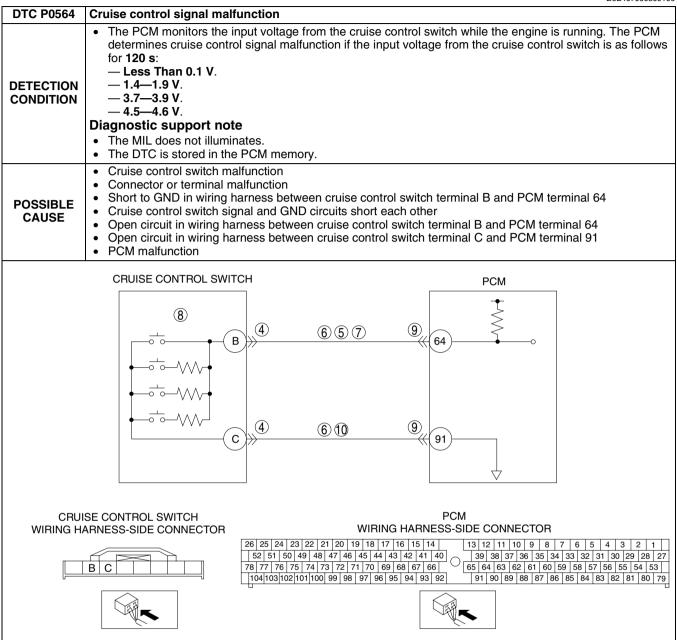

DTC P0563

DTC P0563	Battery voltage high input			
DETECTION CONDITION	 The PCM monitors the battery voltage. If the battery voltage is more than 16 V, the PCM determines that there is a malfunction in the battery charging system. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 			
POSSIBLE CAUSE	 Generator malfunction Battery malfunction Connector or terminal malfunction Open circuit in wiring harness between battery positive terminal, generator terminal B and PCM terminal 27 PCM malfunction 			

Diagnostic procedure

STEP	ostic procedure INSPECTION	ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT GENERATOR TERMINAL FOR POOR	Yes	Connect generator terminal B correctly, then go to Step 10.
	 INSTALLATION Turn the engine switch off. Inspect generator terminal B for looseness. Is there any malfunction? 	No	Go to the next step.
5	INSPECT GENERATOR	Yes	Replace the generator, then go to Step 10.
	Inspect the generator.Is there any malfunction?	No	Go to the next step.
6	INSPECT BATTERY POSITIVE TERMINAL FOR POOR INSTALLATION	Yes	Connect the battery positive terminal correctly, then go to Step 10.
	 Turn the engine switch off. Inspect the battery positive terminal for looseness. Is there any malfunction? 	No	Go to the next step.
7	INSPECT BATTERY	Yes	Replace the battery, then go to Step 10.
	Inspect the battery.Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 6.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT CHARGING CIRCUIT FOR OPEN CIRCUIT	Yes	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
	 Turn the engine switch off. Inspect for continuity between generator terminal B (wiring harness-side), PCM terminal 27 and the battery positive terminal (wiring harness-side). Is there continuity? 	No	Go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P0563	Yes	Replace the PCM, then go to the next step.
10	• Make sure to reconnect all disconnected	No	Go to the next step.
	 connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 		
11	VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode.	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	P
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available Service Information.
	Verify related Service Information availability.		• If vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CRUISE CONTROL SWITCH	Yes	Repair or replace the suspected terminal, go to Step 11.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 11.
	 Turn the engine switch off. Inspect for continuity between cruise control switch terminal B and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT CRUISE CONTROL SWITCH WIRING HARNESSES FOR SHORT WITH EACH OTHER	Yes	Repair or replace the wiring harness for a short with each other, go to Step 11.
	 Turn the engine switch off. Inspect for continuity between cruise control switch terminals B and C. Is there continuity? 	No	Go to the next step.
7	INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT	Yes	Repair or replace the wiring harness for an open circuit, go to Step 11.
	 Turn the engine switch to the ON position. (Engine off) Inspect the voltage at cruise control switch terminal B (harness side). Is the voltage below 1.0 V? 	No	Go to the next step.
8	INSPECT CRUISE CONTROL SWITCH	Yes	Replace the cruise control switch, go to Step 11.
	Inspect the cruise control switch.Is there any malfunction?	No	Go to the next step.
9	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the suspected terminal, go to Step 11.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
10	INSPECT CRUISE CONTROL SWITCH GND	Yes	
	 CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between cruise control switch terminal C and PCM terminal 91. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, go to the next step.
11	VERIFY TROUBLESHOOTING OF DTC P0564	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine and idle it for 120 s or more. Is the same DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
12	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0602

B6E407000600101

DTC P0602	PCM programming error
	 No configuration data in PCM Note If "PCM CONFIGURATION" is successful, the PCM stored DTC P0602 and illuminates the MIL (System i s normal). Clear the DTC P0602 using WDS or equivalent after "PCM CONFIGURATION". MIL goes off after three drive cycles with no failure (DTCs remain in PCM).
	 Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	Complete configuration has not been completed.PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT?	Yes	Perform "PCM Configuration Procedure", then go to the next step.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
2	VERIFY TROUBLESHOOTING OF DTC P0602	Yes	Replace PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
3	 VERIFY AFTER REPAIR PROCEDURE Perform "After Repair Procedure". 	Yes	(See F2-40 DTC TABLE.)
	Are any DTCs present?	No	Troubleshooting completed.

DTC P0606

B6E407000600102

DTC P0606	PCM malfunction			
DETECTION CONDITION	 PCM does not read DTC from output devices. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 			
POSSIBLE CAUSE • PCM internal malfunction				

Diagnostic procedure

STEP	INSPECTION		ACTION
1	-	-	Replace PCM.

DTC P0610	Control module vehicle options error
DETECTION CONDITION	 PCM data configuration error Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE • Configuration procedure has not been completed CAUSE • PCM malfunction	

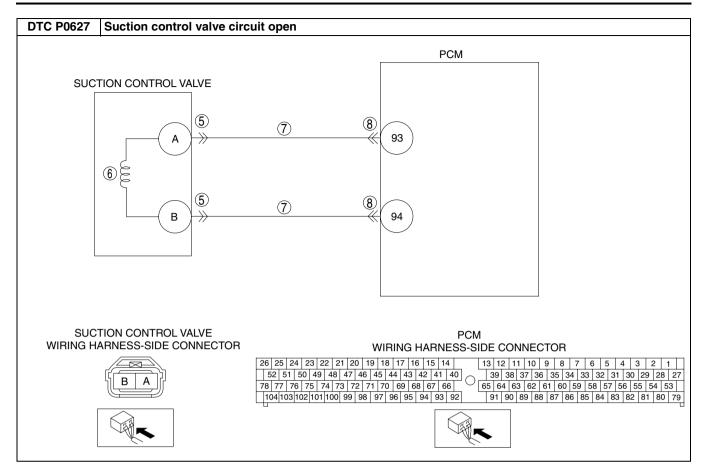

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT?	Yes	Perform "PCM Configuration Procedure", then go to the next step.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
2	VERIFY TROUBLESHOOTING OF DTC P0610	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
3	VERIFY AFTER REPAIR PROCEDURE Perform "After Repair Procedure".	Yes	Go to applicable DTC inspection. (See F2–40 DTC TABLE.)
	Are any DTCs present?	No	Troubleshooting completed.

DTC P0627

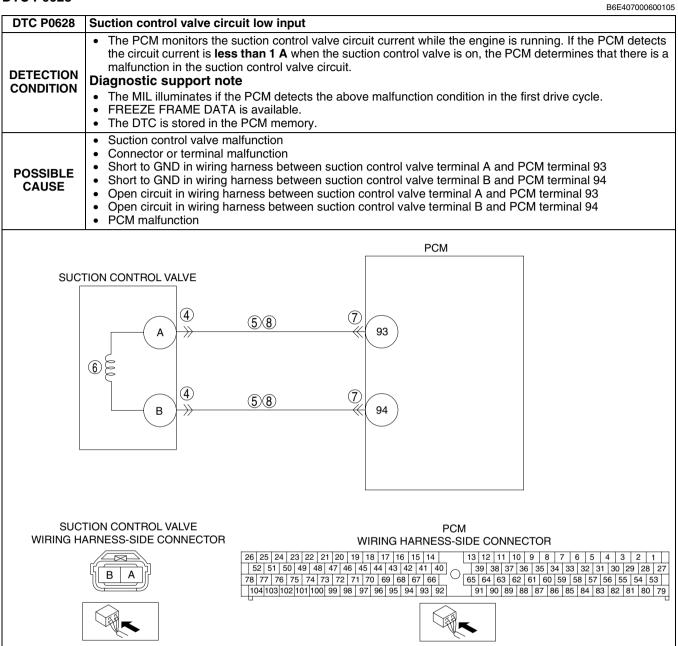

B6E407000600104

DTC P0627	Suction control valve circuit open					
DETECTION CONDITION	 The PCM monitors the suction control valve operation circuit signal frequency at PCM terminal 94. If the difference between the suction control valve operation frequency at PCM terminal 93 and the monitored suction control valve operation circuit signal frequency at PCM terminal 94 exceeds the threshold, the PCM determines that suction control valve open circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 					
POSSIBLE CAUSE	 Suction control valve malfunction Connector or terminal malfunction Short circuit in wiring harness between suction control valve terminal A and B PCM malfunction 					

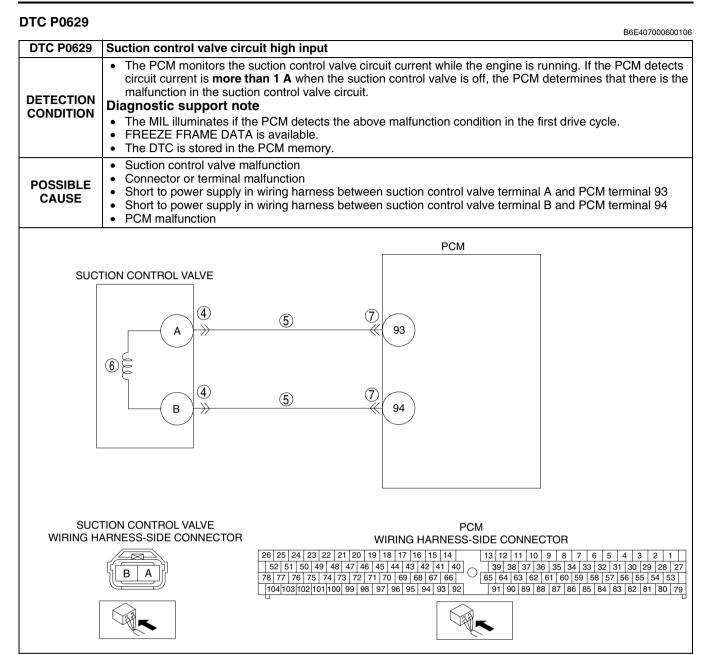

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN RECORDED	Yes No	Go to the next step. Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?	-	then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related Service Bulletins and/or on-line	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	IDENTIFY TRIGGER DTC FOR FREEZE FRAME	Yes	Go to the next step.
·	• Is DTC P0627 on the FREEZE FRAME DATA?	No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA.
5	INSPECT SUCTION CONTROL VALVE CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 9.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
6	INSPECT SUCTION CONTROL VALVE	Yes	Go to the next step.
	Inspect the suction control valve.Is the suction control valve normal?	No	Replace the supply pump, then go to Step 9.
7	INSPECT SUCTION CONTROL VALVE FOR	Yes	Repair or replace for a short, then go to Step 9.
	 SHORT CIRCUIT Turn the engine switch off. Disconnect the PCM and the suction control valve connectors. Inspect for continuity between suction control valve terminal A and B while slightly shaking each connectors and harnesses between the suction control valve and the PCM (including short wiring harness). Is there continuity? 	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to the next step.
	 Turn the engine switch to off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF MISFIRE DTC	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

STEP	INSPECTION	-	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available Service Information.
	Verify related Service Information availability.		• If the vehicle is not repaired, go to the next step.
	Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT POOR CONNECTION OF SUCTION	Yes	Repair or replace the suspected terminal, go to Step 9.
	 CONTROL VALVE CONNECTOR Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT SUCTION CONTROL VALVE CIRCUIT FOR A SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 9.
	 Turn the engine switch off. Inspect for continuity between the following terminals and body GND: Suction control valve terminal A and body GND. Suction control valve terminal B and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT SUCTION CONTROL VALVE	Yes	Repair the supply pump, go to Step 9.
	Inspect the suction control valve.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes No	Repair or replace the suspected terminal, go to Step 9. Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
8	INSPECT SUCTION CONTROL VALVE CIRCUIT	Yes	Go to the next step.
	 FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between the following terminals: Suction control valve terminal A and PCM terminal 93. Suction control valve terminal B and PCM terminal 94. 	No	Repair or replace the wiring harness for an open circuit, go to the next step.
	VERIFY TROUBLESHOOTING OF DTC P0628	Yes	Replace the PCM, go to the next step.
9			Go to the next step.
9	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	
9	 Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. 	No Yes No	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.) Troubleshooting completed.

DTC P0661	B6E407000600107				
DTC P0661	Intake shutter solenoid valve (half) circuit low input				
 The PCM monitors the output signal to the intake shutter solenoid valve (half) when the intake shutter solenoid valve (half) is off. If the intake shutter solenoid valve (half) voltage is less than 7.8 V when the intake shutter solenoid valve (half) off, the PCM determines that there is a malfunction in the intake sh solenoid valve control circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycle in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN		Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnosis according to the available repair information.
	 Verify related service repair information availability. 	No	• If the vehicle is not repaired, go to the next step.
	 Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Go to the next step.
	 (HALF) CONNECTOR FOR POOR CONNECTION Turn the engine switch to the ON position. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is the voltage B+? 	No	Repair or replace the terminal, then go to Step 10.
5	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Go to the next step.
	 (HALF) POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Measure the voltage at intake shutter solenoid valve (half) terminal A. Is the voltage B+? 	No	Repair or replace wiring harness for an open circuit, then go to the next step.
6	INSPECT INTAKE SHUTTER SOLENOID VALVE (HALF) CIRCUIT FOR SHORT TO GND	Yes	Repair or replace wiring harness for a short to GND, then go to Step 10.
	 Turn the engine switch off. Inspect for continuity between Intake shutter solenoid valve (half) terminal B and GND. Is there continuity? 	No	Go to the next step.
7	INSPECT INTAKE SHUTTER SOLENOID VALVE (HALF)	Yes	Replace the intake shutter solenoid valve, then go to Step 10.
	Inspect the intake shutter solenoid valve (half).Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR	Yes	
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	
	 CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between intake shutter solenoid valve (half) terminal B and PCM terminal 74. Is there continuity? 	No	Repair or replace wiring harness for an open circuit, then go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P0661	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P0662	B6E407000600108					
DTC P0662	······································					
 The PCM monitors the output signal to the intake shutter solenoid valve (half) when the intake shutter solenoid valve (half) is on. If the intake shutter solenoid valve (half) voltage is more than 7.8 V when the intake shutter solenoid valve (half) on, the PCM determines that there is a malfunction in the intake shutter solenoid valve (half) control circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycle in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

------------	-----------

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Repair or replace the terminal, then go to Step 8.
	(HALF) CONNECTOR FOR POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
5	INSPECT INTAKE SHUTTER SOLENOID VALVE (HALF) CIRCUIT FOR SHORT TO POWER	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 8.
	 Turn the engine switch off. Inspect the voltage between intake shutter solenoid valve (half) terminal B and body GND. Is the voltage B+? 	No	Go to the next step.
6	INSPECT INTAKE SHUTTER SOLENOID VALVE (HALF)	Yes	Replace the intake shutter solenoid valve, then go to Step 8.
	Inspect the intake shutter solenoid valve (half).Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0662	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	 Are any DTCs present? 	No	Troubleshooting completed.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	repair information.
	 Verify related service repair information 		• If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Go to the next step.
	 (FULL) CONNECTOR FOR POOR CONNECTION Turn the engine switch to the ON position. Inspect for poor connection (such as damaged/pulled-out terminals, corrosion). Is the voltage B+? 	No	Repair or replace the terminal, then go to Step 10.
5	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Go to the next step.
	(FULL) POWER SUPPLY CIRCUIT FOR OPEN	No	Repair or replace the wiring harness for an open circuit,
	 CIRCUIT Turn the engine switch off. Measure the voltage at intake shutter solenoid valve (full) terminal A. Is the voltage B+? 		then go to the next step.
6	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Repair or replace wiring harness for a short to GND, then
	 (FULL) CIRCUIT FOR SHORT TO GND Turn the engine switch off. Inspect for continuity between Intake shutter solenoid valve (full) terminal B and GND. Is there continuity? 		go to Step 10.
		No	Go to the next step.
7	INSPECT INTAKE SHUTTER SOLENOID VALVE (FULL)	Yes	Replace the intake shutter solenoid valve, then go to Step 10.
	Inspect the intake shutter solenoid valve (full).Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 10.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Go to the next step.
	 (FULL) CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between intake shutter solenoid valve terminal B and PCM terminal 74. Is there continuity? 	No	Repair or replace wiring harness for an open circuit, then go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P0664	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
11	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	Perform the Repair Verification Drive Mode. (See E2-39 OBD DRIVE MODE.)	N 1	(See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

2.0.0000	B6E407000600110				
DTC P0665	Intake shutter solenoid valve (full) circuit voltage high input				
 The PCM monitors the output signal to the intake shutter solenoid valve (full) when intake shutter solenoid valve (full) is on. If the intake shutter solenoid valve (full) voltage is more than 7.8 V when the intake shutter solenoid valve (full) is on, the PCM determines that there is a malfunction in the intake shutter solenoid valve (full) control circuit. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT INTAKE SHUTTER SOLENOID VALVE	Yes	Repair or replace the terminal, then go to Step 8.
	(FULL) CONNECTOR FOR POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 		
5	INSPECT INTAKE SHUTTER SOLENOID VALVE (FULL) CIRCUIT FOR SHORT TO POWER	Yes	Repair or replace wiring harness for a short to power supply, then go to Step 8.
	 Turn the engine switch off. Inspect the voltage between intake shutter solenoid valve (full) terminal B and body GND. Is the voltage B+? 	No	Go to the next step.
6	INSPECT INTAKE SHUTTER SOLENOID VALVE (FULL)	Yes	Replace the intake shutter solenoid valve, then go to Step 8.
	Inspect the intake shutter solenoid valve (full).Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P0665	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	 Are any DTCs present? 	No	Troubleshooting completed.

DTC P0704	B6E407000700101						
DTC P0704	Clutch switch circuit malfunction						
 The PCM monitors input voltage from the clutch pedal position switch while the engine running. If the input voltage from the clutch pedal position switch does not change when the vehicle stops after accelerating to more than 30 km/h {18.6 mph} and decelerating to 0 km/h {0 mph}, the PCM determines that the clutch pedal position switch circuit has a malfunction. DETECTION CONDITION The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunctioning condition. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.

TEP	INSPECTION	-	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	• Has FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	Perform repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step
	 Verify related Service Bulletins and/or on-line repair information availability. Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT INPUT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CLUTCH PEDAL POSITION SWITCH CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Ste 10.
	 Turn the engine switch off. Inspect the clutch pedal position switch connector for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT CLUTCH PEDAL POSITION SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT	Yes	Repair or replace the suspected terminal, then go to Ste 10.
	 Turn the engine switch to the ON position (Engine off). Inspect the voltage at clutch pedal position switch terminal B (wiring harness-side). Is the voltage below 1.0 V? 	No	Go to the next step.
6	INSPECT CLUTCH PEDAL POSITION SWITCH	Yes	Go to the next step.
	 GND FOR OPEN CIRCUIT Turn the engine switch off. Inspect continuity between clutch pedal position switch terminal D (wiring harness-side) and body GND. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
7	 INSPECT CLUTCH PEDAL POSITION SWITCH Inspect the clutch pedal position switch. 	Yes	Replace the clutch pedal position switch, then go to Step 10.
	Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the clutch pedal position switch, then to Step 10.
	 Turn the engine switch off. Inspect the PCM connector for poor connection (such as damaged/pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT CLUTCH PEDAL POSITION SWITCH	Yes	Go to the next step.
	 SIGNAL CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect continuity between clutch pedal position switch terminal B (wiring harness-side) and PCM terminal 33 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P0704	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
11	• Perform the Repair Verification Drive Mode.	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

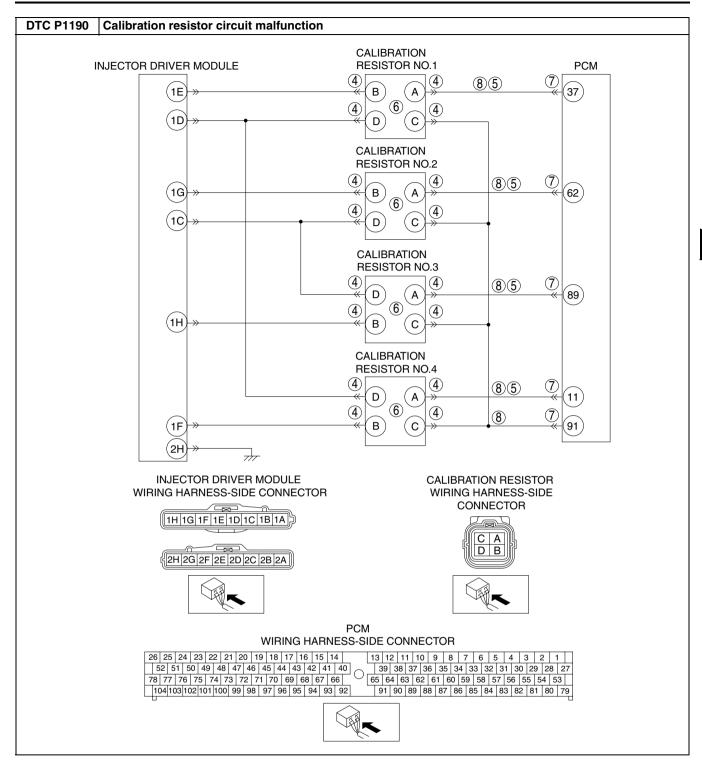

B6E407000800101 **DTC P0850** Neutral switch circuit malfunction The PCM monitors the input signal from the neutral switch when shifting. If the neutral switch signal is not input even once even when vehicle speed is more than 10 km/h {6.2 mph} the shift lever is operated more than five times, the PCM determines that there is a malfunction in the neutral switch circuit. Diagnostic support note DETECTION The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or CONDITION in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory. . Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT NEUTRAL SWITCH CONNECTOR	Yes	Repair or replace the terminal, then go to Step 10.
	 FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 10.
	 Turn the engine switch off. Inspect for continuity between neutral switch terminal A and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT NEUTRAL SWITCH GND CIRCUIT	Yes	Go to the next step.
	 FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between neutral switch terminal B and body GND. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
7	INSPECT NEUTRAL SWITCH	Yes	Replace the neutral switch, then go to Step 10.
	Inspect the neutral switch.Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTO FOR POOR	Yes	Repair or replace the terminal, then go to Step 10.
U	 CONNECTION Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT	Yes	Go to the next step.
	 FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between neutral switch terminal A and PCM terminal 56. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P0850	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See F2 20 OPD DRIVE MODE) 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P1190	Calibration resistor circuit malfunction					
DETECTION CONDITION	 The PCM monitors the input voltage from the calibration resistor of each cylinder. If the PCM detects that the input voltage for any cylinder is more than 4.8 V or less than 0.2 V, the PCM determines calibration resistor malfunction. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 					
POSSIBLE CAUSE	 Calibration resistor malfunction Connector or terminal malfunction Short to power supply in wiring harness between each cylinder calibration resistor terminal A and PCM terminal 37, 62, 89, 11 Open circuit in wiring harness between each cylinder calibration resistor terminal A and PCM terminal 37, 62, 89, 11 Open circuit in wiring harness between each cylinder calibration resistor terminal C and PCM terminal 91 					

Diagnostic procedure

STEP	ostic procedure INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Voc	Go to the next step.
ı	RECORDED Has FREEZE FRAME DATA been recorded?	Yes No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Information availability. Is any related repair information available? 	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	 VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	Yes No	Go to the next step. Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT CALIBRATION RESISTOR	Yes	Repair or replace the suspected terminal, go to Step 9.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Inspect for poor connection calibration resistor connector for each cylinder (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT CALIBRATION RESISTOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY	Yes	Repair or replace the wiring harness for a short to power supply for the suspected cylinder, then go to Step 9.
	 Turn the engine switch to the ON position (Engine off). Disconnect all cylinder's calibration resistor connectors. Inspect the voltage at calibration resister terminal A for each cylinder (wiring harness-side) and body GND. Is the voltage B+? 	No	Go to the next step.
6	INSPECT CALIBRATION RESISTOR	Yes	Replace the calibration resistor, then go to Step 9.
	Inspect the calibration resistor.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 9.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	INSPECT CALIBRATION RESISTOR FOR OPEN	Yes	Go to the next step.
	 CIRCUIT Turn the engine switch off. Inspect for continuity between following terminals (wiring harness-side harness): No.1 cylinder calibration resistor terminal A and PCM terminal 37 No.2 cylinder calibration resistor terminal A and PCM terminal 62 No.3 cylinder calibration resistor terminal A and PCM terminal 89 No.4 cylinder calibration resistor terminal A and PCM terminal 11 Each cylinder calibration resistor terminal C and PCM terminal 91 	No	Repair or replace the wiring harness for the suspected circuit, then go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P1190	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.

DTC P1211

B6E407001200101

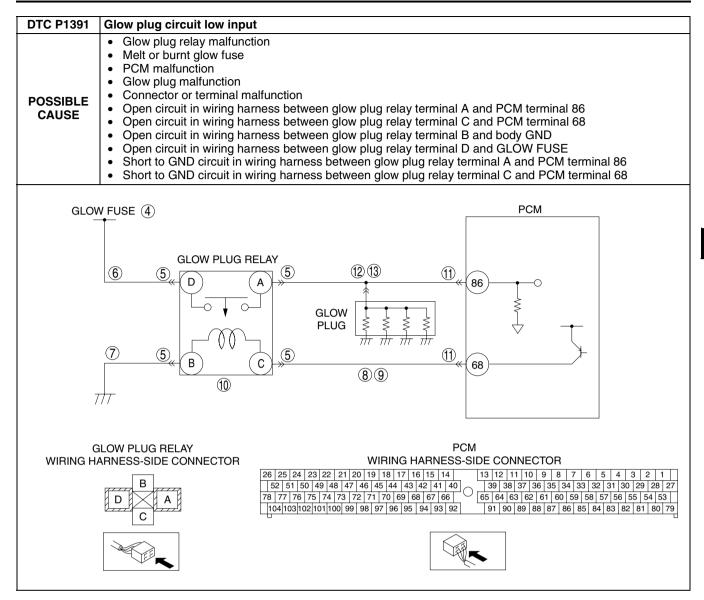

DTC P1211	Fuel pressure higher or lower than desired pressure
DETECTION CONDITION	 The PCM monitors the fuel pressure and calculates the fuel supply volume to the common rail using the fuel pressure sensor input signal while the engine is running. If the fuel pressure or fuel supply volume to the common rail is as follows, the PCM determines that the fuel pressure is higher or lower than the desired pressure. — Supply pump actual pressure is higher than threshold. — Difference between two consecutive fuel supply to common rail volume from supply pump is more than one fuel injection volume by fuel injector. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Suction control valve malfunction Fuel pressure sensor characteristic malfunction Fuel pressure limiter malfunction Supply pump malfunction PCM malfunction

DTC P1391

DTC P1391	Glow plug circuit low input
DETECTION CONDITION	 The PCM monitors the output signal to the glow relay when the glow relay is on. If the glow relay voltage is 1.0 V or less when the glow relay is operating, The PCM determines that there is a malfunction in the glow relay circuit. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.

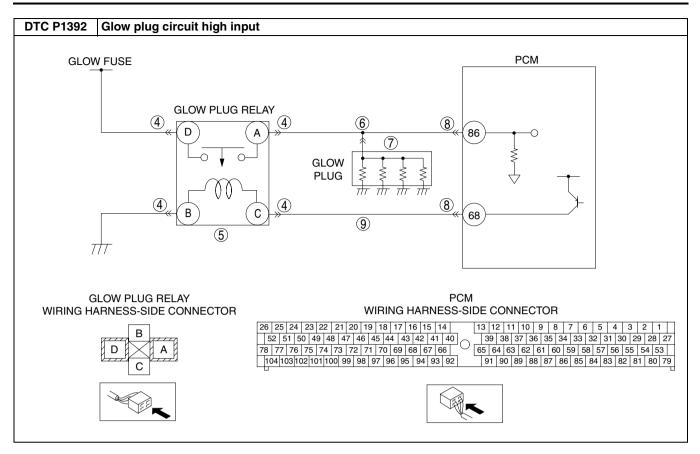

STEP	ostic procedure INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
•	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information	Yes	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	• Turn the engine switch off.	Yes	Go to symptom troubleshooting NO.1 MELTING OF MAIN OR OTHER FUSES.
	Verify glow fuse conditions.Is there any melt or burnt?	No	Go to the next step.
5	INSPECT GLOW PLUG RELAY CONNECTOR	Yes	Repair or replace the terminal, then go to the next step.
	 FOR POOR CONNECTION Turn the engine switch off. Disconnect the glow plug relay connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
6	INSPECT GLOW PLUG RELAY POWER	Yes	Go to the next step.
	 SUPPLY FOR OPEN CIRCUIT Turn the engine switch off. Measure the voltage between glow plug relay terminal D and body GND. Is the voltage B+? 	No	Repair or replace the wiring harness for an open circuit, go to Step 14.
7	INSPECT GLOW PLUG RELAY GRAND FOR	Yes	Go to the next step.
	 OPEN CIRCUIT Turn the engine switch off. Remove the glow plug relay. Inspect for continuity between glow plug relay terminal B and GND. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, go to Step 14.
8	INSPECT GLOW PLUG RELAY SIGNAL FOR OPEN CIRCUIT	Yes	Repair or replace the wiring harness for an open circuit, go to Step 14.
	 Turn the engine switch to the ON position (Engine off). Measure the voltage between glow plug relay terminal C. Is voltage less than 1.0 V? 	No	Go to the next step.
9	INSPECT GLOW PLUG RELAY SIGNAL CIRCUIT FOR SHORT TO GND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 14.
	 Turn the engine switch off. Inspect for continuity between glow plug relay terminal C and body GND. Is there continuity? 	No	Go to the next step.
10	INSPECT GLOW PLUG RELAY	Yes	Go to the next step.
	Inspect the glow plug relay.Is there any malfunction?	No	Replace the glow plug relay, go to Step 14.
11	INSPECT POOR CONNECTION OF PCM	Yes	Repair or replace the suspected terminal, go to Step 14.
	 CONNECTOR Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
			1

STEP	INSPECTION		ACTION
12	INSPECT GLOW PLUG RELAY SIGNAL CIRCUIT FOR SHORT TO GRAND	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 12.
	 Turn the engine switch off. Remove the glow plug connector. Inspect for continuity between glow plug relay terminal A and body GND. Is there continuity? 	No	Go to the next step
13	INSPECT GLOW PLUG RELAY SIGNAL	Yes	Go to the next step
	 CIRCUIT FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between glow plug relay terminal A and PCM terminal 86. Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
14	VERIFY TROUBLESHOOTING OF DTC P1391	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear DTC from PCM memory using WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
15	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

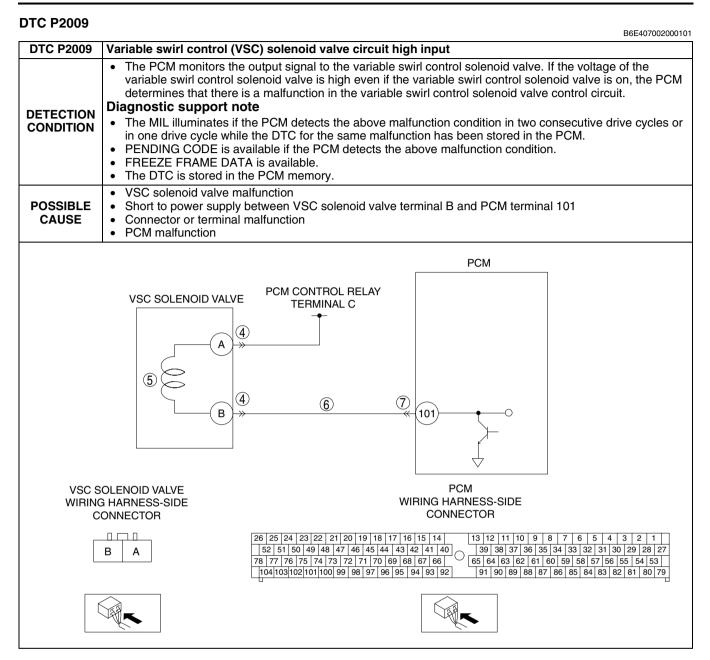

DTC P1392

DTC P1392	Glow plug circuit high input
DETECTION CONDITION	 The PCM monitors the output signal to the glow relay when the glow relay is off. If the glow relay voltage is 4.0 V or more when the glow relay is off, The PCM determines that there is a malfunction in the glow relay control circuit. Diagnostic support note The MIL does not illuminates. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 Glow plug relay malfunction Glow plug malfunction PCM malfunction Connector or terminal malfunction Short to power supply in wiring harness between glow plug relay terminal C and PCM terminal 68 Short to power supply in wiring harness between glow plug relay terminal A and PCM terminal 86

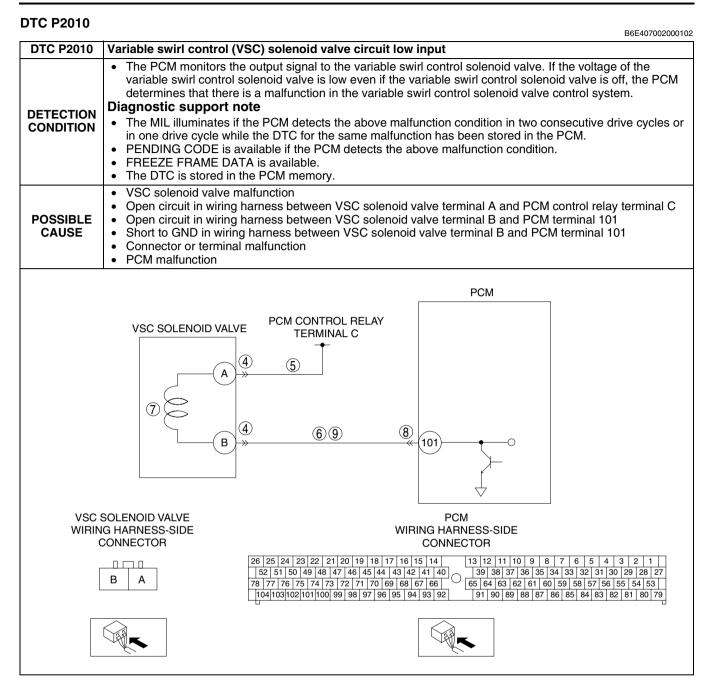

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	
	AVAILABILITY		repair information.
	 Verify related service repair information 		• If the vehicle is not repaired, go to the next step.
	availability.	No	Go to the next step.
	 Is any related repair information available? 		
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	 Connect the WDS or equivalent to the DLC-2. 		Perform the "INTERMITTENT CONCERNS
	Clear the DTC from the PCM memory using the WIDC or equivalent		TROUBLESHOOTING".
	the WDS or equivalent. Start the engine. 		
	Is the same DTC present?		
4	INSPECT GLOW PLUG RELAY CONNECTOR	Vee	Densir or replace the terminal then go to the payt step
4	FOR POOR CONNECTION	Yes	Repair or replace the terminal, then go to the next step.
	Turn the engine switch off.	No	Go to the next step.
	 Disconnect the glow plug relay connector. 		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
	 Is there any malfunction? 		
5	INSPECT GLOW PLUG RELAY	Yes	Replace glow plug relay, go to Step 9.
	 Inspect glow plug relay. 	No	Go to the next step.
	 Is there any malfunction? 	-	
6	INSPECT GLOW PLUG RELAY SIGNAL	Yes	Repair or replace the wiring harness for a short to power
	CIRCUIT FOR SHORT TO POWER		supply, then go to Step 9.
	 Turn the engine switch to the ON position 	No	Go to the next step
	(Engine off).		
	Disconnect the PCM connector.		
	 Measure the voltage between glow plug terminal A and body GND. 		
	 Is the voltage more than 4.0 V? 		
7	INSPECT GLOW PLUG	Yes	Replace glow plug relay, go to Step 9.
'	 Inspect glow plug. 		Go to the next step.
	Is there any malfunction?	No	Go to the next step.
8	INSPECT POOR CONNECTION OF PCM	Yes	Repair or replace the suspected terminal, go to the Step
0	CONNECTOR	100	10.
	Turn the engine switch off.	No	Go to the next step.
	 Inspect for poor connection (such as damaged/ 	110	
	pulled-out terminals, corrosion).		
	 Is there any malfunction? 		
9	INSPECT GLOW PLUG RELAY GRAND	Yes	Repair or replace the wiring harness for a short to power
	CIRCUIT FOR SHORT TO POWER		supply, then go to the next step.
	 Turn the engine switch to off. 	No	Go to the next step
	Remove the glow plug relay.		
	Measure the voltage between glow plug relay		
	terminal C and body GND.		
10	Is the voltage B+?	V-	Deplace the DOM as to the word of
10	VERIFY TROUBLESHOOTING OF DTC P1392	Yes	Replace the PCM, go to the next step.
	COMPLETED	No	Go to the next step.
	 Make sure to reconnect all disconnected connectors. 		
	 Clear the DTC from the PCM memory using 		
	the WDS or equivalent.		
	 Start the engine and warm it up to the normal 		
	operating temperature.		
	 Is the same DTC present? 		
11	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection.
	Perform the Repair Verification Drive Mode.		(See F2-40 DTC TABLE.)
			ł
	(See F2–39 OBD DRIVE MODE.) • Is any DTC present?	No	Troubleshooting completed.

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT POOR CONNECTION OF VSC	Yes	Repair or replace the suspected terminal, go to Step 8.
	 SOLENOID VALVE CONNECTOR Turn the engine switch off. Disconnect the VSC solenoid valve connector. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT VSC SOLENOID VALVE	Yes	Go to the next step.
	Inspect the VSC solenoid valve.Is the VSC solenoid valve normal?	No	Replace the VSC solenoid valve, go to Step 8.
6	INSPECT VSC SOLENOID VALVE FOR SHORT TO POWER	Yes	Repair or replace the wiring harness for a short to power supply, go to Step 8.
	 Turn the engine switch to the ON position (Engine off). Measure the voltage between VSC solenoid valve terminal B (wiring harness-side) and body ground. Is the voltage B+? 	No	Go to the next step.
7	INSPECT POOR CONNECTION OF PCM CONNECTOR	Yes	Repair or replace the suspected terminal, go to the next step.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P2009	Yes	Replace the PCM, go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE)
	 Are any DTCs present? 	No	Troubleshooting completed.

STEP	INSPECTION	-	ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT POOR CONNECTION OF VSC	Yes	Go to the next step.
	 SOLENOID VALVE CONNECTOR Turn engine switch to off. Disconnect the VSC solenoid valve connector. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Repair or replace the suspected terminal, go to Step 10.
5	INSPECT VSC SOLENOID VALVE POWER	Yes	Go to the next step.
	 SUPPLY FOR OPEN CIRCUIT Turn the engine switch to the ON position (Engine off). Measure the voltage between VSC solenoid valve terminal A (harness-side) and body ground Is the voltage B+? 	No	Repair or replace the wiring harness for an open circuit, go to Step 10.
6	INSPECT VSC SOLENOID VALVE CONTROL FOR SHORT TO GROUND	Yes	Repair or replace the wiring harness for a short to GND, go to Step 10.
	 Turn the engine switch off. Inspect for continuity between VSC solenoid valve terminal B (wiring harness-side) and body ground. Is there continuity? 	No	Go to the next step.
7	INSPECT VSC SOLENOID VALVE	Yes	Replace the VSC solenoid valve, go to Step 10.
	Inspect the VSC solenoid valve.Is there any malfunction?	No	Go to the next step.
8	INSPECT POOR CONNECTION OF PCM	Yes	Repair or replace the suspected terminal, go to Step 10.
	 CONNECTOR Turn the engine switch off. Disconnect PCM connector. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT VSC SOLENOID VALVE CONTROL	Yes	·
	 FOR OPEN CIRCUIT Turn the engine switch off. Inspect for continuity between VSC solenoid valve terminal B (wiring harness-side) and PCM terminal 101 (wiring harness-side). Is there continuity? 	No	Repair or replace the wiring harness for a short to GND, go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P2010	Yes	Replace the PCM, them go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P2135

B6E407002100101

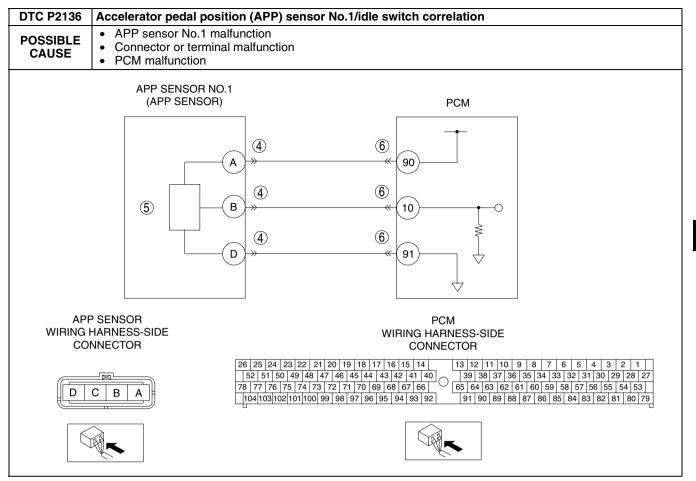

DTC P2135	Accelerator pedal position (APP) sensor No.1/No.2 voltage correlation		
DETECTION CONDITION	 The PCM monitors the input signals from accelerator pedal position sensor No.1 and accelerator pedal position sensor No.2. If the difference between accelerator pedal position sensor No.1 and accelerator pedal position sensor No.2 is more than 0.9 V, the PCM determines that there is a malfunction in the accelerator pedal position sensor characteristic. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		
POSSIBLE CAUSE	 APP sensor No.1 malfunction APP sensor No.2 malfunction PCM malfunction 		

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes No	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT APP SENSOR	Yes	Replace the APP sensor, then go to Step 5.
	Inspect the APP sensor.Is there any malfunction?	No	Go to the next step.
5	VERIFY TROUBLESHOOTING OF DTC P2135	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
6	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

DTC P2136

DTC P2136	Accelerator pedal position (APP) sensor No.1/idle switch correlation	
DETECTION CONDITION		

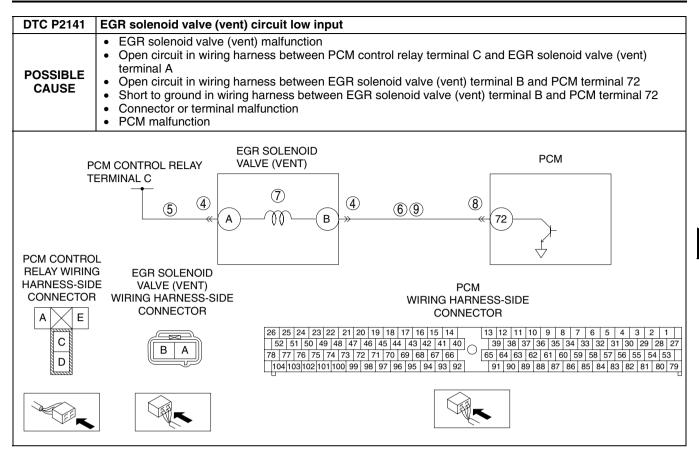

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDED	No	Record the FREEZE FRAME DATA on the repair order,
	Has FREEZE FRAME DATA been recorded?		then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION	Yes	Perform repair or diagnosis according to the available
	AVAILABILITY		repair information.If the vehicle is not repaired, go to the next step.
	 Verify related service repair information availability 	Nia	
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
•	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	• Connect the WDS or equivalent to the DLC-2.	110	Perform the "INTERMITTENT CONCERNS
	 Clear the DTC from the PCM memory using 		TROUBLESHOOTING".
	the WDS or equivalent.		
	Start the engine.Is the same DTC present?		
4	INSPECT APP SENSOR CONNECTOR FOR	Yes	Repair or replace the terminal, then go to Step 7.
	POOR CONNECTION	No	Go to the next step.
	 Turn the engine switch off. 		•
	Disconnect the APP sensor connector.		
	 Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). 		
	 Is there any malfunction? 		
5	INSPECT APP SENSOR	Yes	Replace the APP sensor, then go to Step 7.
	Inspect the APP sensor.	No	Go to the next step.
	Is there any malfunction?		-
6	INSPECT PCM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the terminal, then go to the next step.
	Turn the engine switch off.	No	Go to the next step.
	 Disconnect the PCM connector. 		
	 Inspect for poor connection (such as damaged/ 		
	pulled-out pins, corrosion).		
7	Is there any malfunction?	Maa	Devices the DOM there are to the proof story
7	VERIFY TROUBLESHOOTING OF DTC P2136 COMPLETED	Yes	
	Make sure to reconnect all disconnected	No	Go to the next step.
	connectors.		
	Clear the DTC from the PCM memory using		
	the WDS or equivalent.		
	Start the engine.		
	Is the same DTC present?	V	Cata the englished DTC increasting
8	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	 Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) 	No	DTC troubleshooting completed.
	Are any DTCs present?	INU	Dio noubleanooning completed.

DTC P2141

DTC P2141	EGR solenoid valve (vent) circuit low input		
	 The PCM monitors the output signal to the EGR solenoid valve (vent). If the EGR solenoid valve (vent) voltage is low even if the EGR solenoid valve (vent) is off, the PCM determines that there is a malfunction in the intake shutter solenoid valve control system. Diagnostic support note 		
DETECTION CONDITION	 The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory. 		

STEP	ostic procedure INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
•	 RECORDED Has FREEZE FRAME DATA been recorded? 	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT EGR SOLENOID VALVE (VENT)	Yes	Repair or replace the terminal, then go to Step 10.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Disconnect the EGR solenoid valve (vent) connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT EGR SOLENOID VALVE (VENT)	Yes	Go to the next step.
	 POWER SUPPLY FOR OPEN CIRCUIT Turn the engine switch to the ON position (Engine off). Measure the voltage between EGR solenoid valve (vent) terminal A (wiring harness-side) and body GND. Is the voltage B+? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
6	INSPECT EGR SOLENOID VALVE (VENT)	Yes	Repair or replace the wiring harness for a possible short to
	 CONTROL CIRCUIT FOR SHORT TO GROUND Inspect continuity between EGR solenoid valve (vent) terminal B (wiring harness-side) and body ground. Is there continuity 	No	ground, then go to Step 10. Go to the next step.
7	INSPECT EGR SOLENOID VALVE (VENT)	Yes	Replace the EGR solenoid valve (vent), then go to Step 10.
	Inspect the EGR solenoid valve (vent).Is there any malfunction?	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 10.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
9	INSPECT EGR SOLENOID VALVE (VENT)	Yes	Go to the next step.
	 CONTROL FOR OPEN CIRCUIT Inspect continuity between EGR solenoid valve (vent) terminal B (wiring harness-side) and PCM terminal 72 (wiring harness-side). Is there continuity 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	 VERIFY TROUBLESHOOTING OF DTC P2141 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	Yes No	Replace the PCM, then go to the next step. Go to the next step.

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
-	RECORDED • Has FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY	Yes	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	 Verify related service repair information availability. Is any related repair information available? 	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
0	CONCERN INTERMITTENT OR CONSTANT?	No	Intermittent concern exists.
	 Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	NO	Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT EGR CONTROL SOLENOID VALVE	Yes	Repair or replace the terminal, then go to Step 10.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Disconnect the EGR control solenoid valve connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT EGR CONTROL SOLENOID VALVE	Yes	Go to the next step.
	 POWER SUPPLY CIRCUIT FOR OPEN Turn the engine switch to the ON position (Engine off). Measure the voltage between EGR control solenoid valve terminal A (wiring harness-side) and body GND. Is the voltage B+? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
6	INSPECT EGR CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
	 Inspect continuity between EGR control solenoid valve terminal B (wiring harness-side) and body ground. Is there continuity 	No	Go to the next step.
7	 INSPECT EGR CONTROL SOLENOID VALVE Inspect the EGR control solenoid valve. 	Yes	Replace the EGR control solenoid valve, then go to Step 10.
	 Is there any malfunction? 	No	Go to the next step.
8	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to Step 10.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
9		Yes	Go to the next step.
	 CONTROL CIRCUIT FOR OPEN Inspect continuity between EGR control solenoid valve terminal B (wiring harness-side) and PCM terminal 77 (wiring harness-side). Is there continuity 	No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	VERIFY TROUBLESHOOTING OF DTC P2144 COMPLETED	Yes	Replace the PCM, then go to the next step.
	 Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.

STEP	INSPECTION		ACTION
11	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	DTC troubleshooting completed.

2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
	availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT EGR CONTROL SOLENOID VALVE	Yes	Repair or replace the terminal, then go to Step 8.
	 CONNECTOR FOR POOR CONNECTION Turn the engine switch off. Disconnect the EGR control solenoid valve connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT EGR CONTROL SOLENOID VALVE	Yes	Go to the next step.
	 POWER CIRCUIT FOR SHORT TO POWER Turn the engine switch to the ON position (Engine off). Measure the voltage between EGR control solenoid valve terminal B (wiring harness-side) and body GND. Is the voltage B+? 	No	Repair or replace the wiring harness for a short to power, then go to Step 8.
6	INSPECT EGR CONTROL SOLENOID VALVE	Yes	Replace the EGR control solenoid valve, then go to Step 8.
	Inspect the EGR control solenoid valve.Is there any malfunction?	No	Go to the next step.
7	INSPECT PCM CONNECTOR FOR POOR	Yes	Repair or replace the terminal, then go to the next step.
	 CONNECTION Turn the engine switch off. Disconnect the PCM connector. Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). Is there any malfunction? 	No	Go to the next step.
8	VERIFY TROUBLESHOOTING OF DTC P2145	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Go to the next step.
9	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	DTC troubleshooting completed.

DTC P2146

DIC P2146	B6E407002100107
DTC P2146	Fuel injector No.1/No.4 circuit malfunction
DETECTION CONDITION	 The PCM monitors each cylinder injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.1 and No.4 cylinder normally, the PCM determines that the fuel injector No.1 and No.4 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 1D and fuel injector No.1 terminal D Short to power supply in wiring harness between IDM terminal 1D and fuel injector No.1 terminal D Open circuit in wiring harness between IDM terminal 1D and fuel injector No.1 terminal D Short to GND in wiring harness between IDM terminal 1D and fuel injector No.1 terminal D Short to GND in wiring harness between fuel injector No.4 terminal D and IDM terminal 1D Short to power supply in wiring harness between fuel injector No.4 terminal D and IDM terminal 1D Open circuit in wiring harness between fuel injector No.4 terminal D and IDM terminal 1D Open circuit in wiring harness between fuel injector No.4 terminal D and IDM terminal 1D PCM malfunction

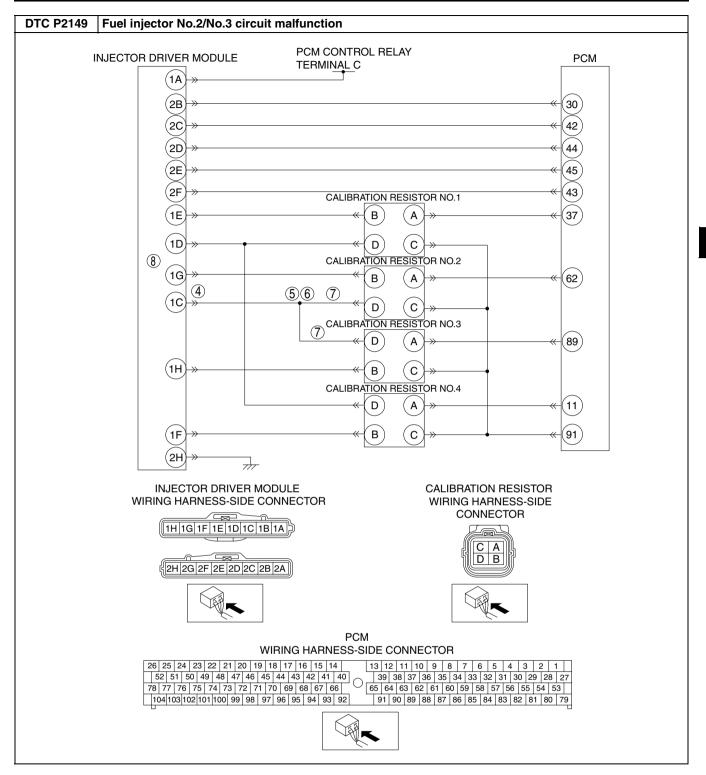

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related Service Bulletins and/or on-line	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?	No	Go to the next step.
3	 VERIFY CURRENT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. 	Yes No	Go to the next step. Intermittent concern exists.
	 Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 		Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 9.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IDM FOR SHORT TO GNDTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 9.
	 Inspect continuity between IDM terminal 1D and body GND. Is there continuity? 	No	Go to the next step.
6	INSPECT IDM FOR SHORT TO POWERTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to power, then go to Step 9.
	 Inspect the voltage between IDM terminal 1D and body GND. Is the voltage B+? 	No	Go to the next step.
7	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.1/NO.4 Turn the engine switch off. Inspect continuity between following wiring harnesses. IDM terminal 1D and fuel injector No.1 terminal D IDM terminal 1D and fuel injector No.4 terminal D Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	INSPECT IDM	Yes	Replace the IDM, then go to step 9.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P2146	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (200 50 000 DBIN/5 MODE) 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P2149

```
B6E407002100108
```

DTC P2149	Fuel injector No.2/No.3 circuit malfunction
DETECTION CONDITION	 The PCM monitors each cylinder's injection confirmation signal from the IDM while the engine is running. If the PCM does not receive the injection confirmation signal for No.2 and No.3 cylinder normally, the PCM determines that the fuel injector No.2 and No.3 operation is not verified. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	 IDM malfunction Connector or terminal malfunction Short to GND in wiring harness between IDM terminal 1C and fuel injector No.2 terminal D Short to power supply in wiring harness between IDM terminal 1C and fuel injector No.2 terminal D Open circuit in wiring harness between IDM terminal 1C and fuel injector No.2 terminal D Fuel injector No.3 malfunction Short to GND in wiring harness between fuel injector No.3 terminal D and IDM terminal 1C Short to power supply in wiring harness between fuel injector No.3 terminal D and IDM terminal 1C Short to power supply in wiring harness between fuel injector No.3 terminal D and IDM terminal 1C Open circuit in wiring harness between fuel injector No.3 terminal D and IDM terminal 1C Open circuit in wiring harness between fuel injector No.3 terminal D and IDM terminal 1C PCM malfunction

	ostic procedure		
STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related Service Bulletins and/or on-line 	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.
	repair information availability.Is any related repair information available?	No	Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	INSPECT IDM CONNECTOR FOR POOR CONNECTION	Yes	Repair or replace the suspected terminal, then go to Step 9.
	 Turn the engine switch off. Inspect for poor connection (such as damaged/ pulled-out terminals, corrosion). Is there any malfunction? 	No	Go to the next step.
5	INSPECT IDM FOR SHORT TO GNDTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to GND, then go to Step 9.
	 Inspect continuity between IDM terminal 1C and body GND. IDM terminal 1C and fuel injector No.2 terminal D IDM terminal 1C and fuel injector No.3 terminal D Is there continuity? 	No	Go to the next step.
6	INSPECT IDM FOR SHORT TO POWERTurn the engine switch off.	Yes	Repair or replace the wiring harness for a short to power, then go to Step 9.
	 Inspect voltage between IDM terminal 1C and body GND. Is voltage B+? 	No	Go to the next step.
7	INSPECT FOR OPEN CIRCUIT BETWEEN IDM	Yes	Go to the next step.
	 AND FUEL INJECTOR NO.2/NO.3 Turn the engine switch off. Inspect continuity between following wiring harness: IDM terminal 1C and fuel injector No.2 terminal D IDM terminal 1C and fuel injector No.3 terminal D Is there continuity? 	No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	INSPECT IDM	Yes	Replace the IDM, then go to step 9.
	Inspect the IDM.Is there any malfunction?	No	Go to the next step.
9	VERIFY TROUBLESHOOTING OF DTC P2149	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Clear the DTC using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Go to the next step.
10	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. (See 52, 20 ORD DRIVE MODE.) 	Yes	Go to the applicable DTC troubleshooting. (See F2-40 DTC TABLE.)
	(See F2–39 OBD DRIVE MODE.)Are any DTCs present?	No	Troubleshooting completed.

DTC P2227

DIC P2221	B6E407002200101
DTC P2227	BARO sensor range/performance problem
DETECTION CONDITION	 The PCM monitors the input signal from the barometric pressure sensor. If the difference between the barometric pressure input from the barometric pressure sensor and the manifold absolute pressure is more than 75 mmHg, the PCM determines that there is a malfunction in the barometric pressure sensor. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. PENDING CODE is available if the PCM detects the above malfunction condition. FREEZE FRAME DATA is available. DTC is stored in the PCM memory.
POSSIBLE CAUSE	BARO sensor (integrated in PCM) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. Is any related repair information available? 	Yes No	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.Go to the next step.
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the PENDING CODE for this DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".
4	VERIFY TROUBLESHOOTING OF DTC P2227	Yes	Replace the PCM, then go to the next step.
	 COMPLETED Make sure to reconnect all disconnected connectors. Turn the engine switch to the ON position (Engine off). Clear the DTC from the memory using the WDS or equivalent. Perform the Repair Verification Drive Mode. (See F2-39 OBD DRIVE MODE.) Is the PENDING CODE for this DTC present? 	No	No concern is detected. Go to the next step.
6	• Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)
		No	Troubleshooting completed.

DTC P2228

DTC P2228	BARO sensor circuit low input
DETECTION CONDITION	 The PCM monitors the input signal from the barometric pressure sensor. If the voltage from the barometric pressure sensor is less than 0.4 V, the PCM determines that there is a malfunction in the barometric pressure sensor signal system. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	BARO sensor (integrated in PCM) malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION	
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.	
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.	
2	VERIFY RELATED REPAIR INFORMATION AVAILABILITY • Verify related service repair information	Yes	Perform repair or diagnosis according to the available repair information.If the vehicle is not repaired, go to the next step.	
	availability.Is any related repair information available?	No	Go to the next step.	
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.	
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".	
4	VERIFY TROUBLESHOOTING OF DTC P2228	Yes	Replace PCM, then go to the next step.	
	 COMPLETED Make sure to reconnect all disconnected connectors. Turn the engine switch to the ON position (Engine off). Clear the DTC from the memory using the WDS or equivalent. Start the engine. Is same DTC present? 	No	No concern is detected. Go to the next step.	
5	 VERIFY AFTER REPAIR PROCEDURE Perform the Repair Verification Drive Mode. 	Yes	Go to the applicable DTC inspection. (See F2–40 DTC TABLE.)	
	(See F2–39 OBD DRIVE MODE.) • Are any DTCs present?	No	Troubleshooting completed.	

DTC P2229

DTC P2229	BARO sensor circuit high input
DETECTION CONDITION	 The PCM monitors the input signal from the barometric pressure sensor. If the voltage from the barometric pressure sensor is more than 4.7 V, the PCM determines that there is a malfunction in the barometric pressure sensor signal system. Diagnostic support note The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. FREEZE FRAME DATA is available. The DTC is stored in the PCM memory.
POSSIBLE CAUSE	BARO sensor (integrated in PCM) malfunction

Diagnostic	procedure
-------------------	-----------

STEP	INSPECTION		ACTION								
1	VERIFY FREEZE FRAME DATA HAS BEEN	Yes	Go to the next step.								
	RECORDEDHas FREEZE FRAME DATA been recorded?	No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.								
2	 VERIFY RELATED REPAIR INFORMATION AVAILABILITY Verify related service repair information availability. 	Yes	 Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step. 								
	 Is any related repair information available? 	No	Go to the next step.								
3	VERIFY CURRENT SIGNAL STATUS: IS	Yes	Go to the next step.								
	 CONCERN INTERMITTENT OR CONSTANT? Connect the WDS or equivalent to the DLC-2. Clear the DTC from the PCM memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	Intermittent concern exists. Perform the "INTERMITTENT CONCERNS TROUBLESHOOTING".								
4	VERIFY TROUBLESHOOTING OF DTC P2229	Yes	Replace the PCM, then go to the next step.								
	 COMPLETED Make sure to reconnect all disconnected connectors. Turn the engine switch to the ON position (Engine off). Clear the DTC from the memory using the WDS or equivalent. Start the engine. Is the same DTC present? 	No	No concern is detected. Go to the next step.								
5	VERIFY AFTER REPAIR PROCEDURE	Yes	Go to the applicable DTC inspection. (See F2-40 DTC TABLE.)								
	 Perform the Repair Verification Drive Mode. (See F2–39 OBD DRIVE MODE.) Are any DTCs present? 	No	Troubleshooting completed.

NO.5 ENGINE STALLS-AFTER START/AT IDLE

5	ENGINE STALLS-AFTER START/AT IDLE
DESCRIPTION	Engine stops unexpectedly.

F2

5	ENGINE STALLS-AFTER START/AT IDLE
POSSIBLE CAUSE	 Poor fuel quality Intake-air system restriction or clogging Engine overheating A/C system improper operation Immobilizer system and/or circuit malfunction (if equipped) PCM control relay malfunction Glow system malfunction Inadequate fuel pressure Fuel pressure sensor related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction Fuel pressure inter malfunction (built-in common rail) Fuel leakage Fuel line clogging or restriction Fuel line clogging or restriction Incorrect fuel injection timing Erratic signal from CKP sensor Supply pump malfunction Low engine compression Improper valve timing Exhaust system malfunction EGR system malfunction ECT sensor or related circuit malfunction Accelerator positions sensor malfunction Accelerator positions sensor related circuit malfunction Accelerator positions sensor or related circuit malfunction Accelerator positions sensor or related circuit malfunction V-reference voltage supply circuit malfunction WAF/IAT sensor or related circuit malfunction WAF/IAT sensor or related circuit malfunction Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFORE REPAIR

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Note The following test should be performed for 	Yes	Both conditions appear: Go to Step 4.
	vehicles with immobilizer system. Go to Step 10 for vehicles without immobilizer system.	No	Either or other condition appears: Go to the next step.
	 Connect the WDS or equivalent to the DLC-2. Do the following conditions appear? The engine is not completely started. DTC B1681 is displayed. 		
2	Is the coil connector securely connected to the	Yes	Go to the next step.
	coil?	No	Connect the coil connector securely. Return to Step 1.
3	Does the security light illuminate?	Yes	Go to the next step.
		No	Inspect the instrument cluster and the wiring harness.
4	Connect the WDS or equivalent to the DLC-2	Yes	Go to the appropriate DTC test.
	and retrieve the DTC. DTC B1213, B1342, B1600, B1601, B1602, B1681,	No	Go to the next step.
	B2103, B2431		
5	Is there continuity between PCM GND terminals	Yes	Go to the next step.
	65, 85, 103, 104 and GND?	No	Repair or replace the wiring harness.
6	Measure the voltage between PCM GND	Yes	Go to the next step.
	terminals 65, 85, 103, 104 and coil terminal C. Is the voltage below 1.0?	No	Repair or replace the wiring harness.
7	Turn the engine switch to the ON position.	Yes	Go to the next step.
	Access the VPWR PID. Is the VPWR PID normal? Specification Battery voltage	No	Repair or replace the wiring harness.
8	Disconnect the coil connector. Turn the engine switch to the ON position. Is there the battery voltage at coil connector terminal D (harness-side)?	Yes	 Inspect for the following: Open or short circuit between coil terminal A and PCM terminal 80 Open or short circuit between coil terminal B and PCM terminal 28
		No	Repair or replace the wiring harness between coil connector terminal D and the fuse panel.
9	Is there continuity between PCM terminal 57 and	Yes	Go to the next step.
	the starter relay?	No	Repair replace the wiring harness.
10	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as include water contamination, winter/summer blend) Fuel line/fuel filter clogging Intake-air system restriction Are all items normal? 	No	Service if necessary. Repeat Step 10.
11	Is the engine overheating?	Yes	Go to symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS-OVERHEATING".
		No	Go to the next step.
12	Note	Yes	Go to the next step.
	 Ignore DTC P0122, P0123, P0222 or P0223 while performing this test. 	No	Go to the symptom troubleshooting "NO.26 CONSTANT VOLTAGE".
	Disconnect the accelerator position sensor connector. Measure the voltage at the accelerator position sensor connector VREF terminal (terminal D) with the engine switch at the ON position. Specification 4.5—5.5 V Is the voltage normal?		

F2

13	INSPECTION	RESULTS	ACTION
	Connect the WDS or equivalent to the DLC-2. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
14	Does the engine start normally after warm-up?	Yes	Inspect the glow system operation. Replace any malfunctioning part if necessary. If the glow system is normal, go to the next step.
		No	Go to the next step.
15	Is there any restriction in the exhaust system or	Yes	Repair or replace if necessary.
	the catalyst converter?	No	Go to the next step.
16	Access the RPM PID. Is the RPM PID indicating the engine speed	Yes	Go to the next step.
	while cranking the engine?	No	Go to Step 19.
17	Note	Yes	Go to the next step.
	 The following test should be performed on the vehicles with A/C system. If the following test cannot be performed due to the engine stall, go to the next step. Go to next step for the vehicle without A/C system. Connect the pressure gauge to the A/C line. Turn the blower and A/C switches on. Is the pressure within specifications? 	No	 A/C is always on: Go to the symptom troubleshooting "NO.24 A/C ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". Other symptoms: Inspect the following: Refrigerant charging amount Cooling fan No.1 and/or cooling fan No.2 operation
18	Inspect the adjustment of the accelerator	Yes	Go to the next step.
	position sensor and the idle switch. Are the accelerator position sensor and the idle switch adjusted correctly?	No	Adjust the accelerator position sensor and the idle switch correctly.
19	Depress the accelerator pedal slightly.	Yes	Inspect the idle speed.
	Crank the engine. Does the engine start now?	No	Go to the next step.
20	Inspect the fuel pipe for fuel leakage.	Yes	Repair or replace if necessary.
	Is any fuel leakage found on the fuel pipe?	No	Go to the next step.
21	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
22	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
23	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: • ECT • IAT • MAF • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
			Develope the method is size we we
		No	Replace the malfunctioning parts.
24	Inspect the fuel pressure sensor.	Yes	Go to the next step.
24	Inspect the fuel pressure sensor. Is the fuel pressure normal? Inspect the suction control valve.		

F2-208

STEP	INSPECTION	RESULTS	ACTION				
26	Is the engine compression correct?	Yes	Go to the next step.				
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.				
27	Inspect the fuel injector.	Yes	Go to the next step.				
	Is the fuel injector normal?	No	Repair or replace if necessary.				
28	Inspect the IDM.	Yes	Go to the next step.				
	Is the IDM normal?	No	Repair or replace if necessary.				
29	Inspect EGR system operation. Is EGR system operation normal?	Yes	Remove and inspect the supply pump and the common rail.				
		No	Repair or replace the malfunctioning part according to the EGR control system inspection results.				
30	 30 Verify the test results. If normal, return to the diagnostic index to service any additional symptoms. If the malfunction remains, replace the PCM. 						

NO.6 CRANKS NORMALLY BUT WILL NOT START

	B6E408018881
6	CRANKS NORMALLY BUT WILL NOT START
DESCRIPTION	 The starter cranks the engine at normal speed but the engine will not run. Refer to the symptom troubleshooting "No.5 Engine stalls" if this symptom appears after engine stall. Fuel is in the fuel tank. Battery is in normal condition.
POSSIBLE CAUSE	 Poor fuel quality Intake-air system restriction Fuel line restriction EGR system malfunction EGR valve position sensor malfunction Glow system malfunction Fuel pressure sensor or related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction (built-in common rail) Fuel pressure limiter malfunction (built-in common rail) Fuel leakage Fuel liter clogging Incorrect fuel injection timing Erratic signal from CKP sensor Erratic signal from CKP sensor V-reference supply circuit malfunction Supply pump malfunction Fuel injector malfunction Supply pump malfunction Immobilizer system and/or circuit malfunction (if equipped) Low engine compression Improper valve timing IDM or related circuit malfunction PCM control repay malfunction
	 Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always kee sparks and flames away from fuel. Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or deat and damage. Fuel can also irritate skin and eyes. To prevent this, always complete "BEFOR REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.

F2

STEP	INSPECTION	RESULTS	ACTION
1	NoteThe following test should be performed for	Yes	Both conditions appear: Go to Step 4.
	the vehicles with immobilizer system. Go to Step 10 for the vehicles without immobilizer system.	No	Either or other condition appears: Go to the next step.
	Connect the WDS or equivalent to the DLC-2. Do the following conditions appear? • The engine is not completely started. • DTC B1681 is displayed.		
2	Is the coil connector securely connected to the	Yes	Go to the next step.
	coil?	No	Connect the coil connector securely. Return to Step 1.
3	Does the security light illuminate?	Yes	Go to the next step.
		No	Inspect the instrument cluster and the wiring harness.
4	Connect the WDS or equivalent to the DLC-2	Yes	Go to the appropriate DTC test.
	and retrieve the DTC. DTC B1213, B1342, B1600, B1601, B1602, B1681, B2103, B2431	No	Go to the next step.
5	Is there continuity between PCM GND terminals	Yes	Go to the next step.
5	65, 85, 103, 104 and GND?	No	Repair or replace the wiring harness.
6	Measure the voltage between PCM GND	Yes	Go to the next step.
Ũ	terminals 65, 85, 103, 104 and coil terminal C. Is the voltage below 1.0?	No	Repair or replace the wiring harness.
7	Turn the engine switch to the ON position.	Yes	Go to the next step.
	Access the VPWR PID. Is the VPWR PID normal? Specification Battery voltage	No	Repair or replace the wiring harness.
8	Disconnect the coil connector. Turn the engine switch to the ON position. Is there battery voltage at coil connector terminal D (harness-side)?	Yes	 Inspect for the following: Open or short circuit between coil terminal A and PCM terminal 80 Open or short circuit between coil terminal B and PCM terminal 28
		No	Repair or replace the wiring harness between coil connector terminal D and the fuse panel.
9	Is there continuity between PCM terminal 57 and	Yes	Go to the next step.
	the starter relay?	No	Repair or replace the wiring harness.
10	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as water contamination, winter/summer blend) Fuel line/fuel filter clogging Intake-air system restriction Are all items normal? 	No	Service if necessary. Repeat Step 10.
11	Note	Yes	Go to the next step.
	Ignore DTC P0122, P0123, P0222 or P0223 while performing this test.	No	Go to the symptom troubleshooting "NO.26 CONSTANT VOLTAGE".
	Disconnect the accelerator position sensor connector. Measure the voltage at the accelerator position sensor connector VREF terminal (terminal D) with the engine switch at ON position. Specification 4.5–5.5 V		
	Is the voltage normal?		

STEP	INSPECTION	RESULTS	ACTION
12	Connect the WDS or equivalent to the DLC-2. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85,
		No	 103 or 104) Poor connection at vehicle body GND No DTC is displayed:
			Go to the next step.
13	Inspect glow system operation.	Yes	Go to the next step.
	Is glow system operation normal?	No	Repair or replace the malfunctioning part according to glow system operation.
14	Inspect the fuel pipe for fuel leakage.	Yes	Repair or replace as necessary.
	Is any fuel leakage found on the fuel pipe?	No	Go to the next step.
15	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
16	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
17	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step. Perdemention
10		No	Replace the malfunctioning parts.
18	Inspect the fuel pressure sensor. Is the fuel pressure normal?	Yes	Go to the next step.
	•	No	Replace the common rail.
19	Inspect the suction control valve. Is the suction control valve normal?	Yes	Go to the next step.
		No	Repair the supply pump.
20	Is the engine compression correct?	Yes No	Go to the next step. Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
21	Inspect the fuel injector.	Yes	Go to the next step.
	Is the fuel injector normal?	No	Repair or replace if necessary.
22	Inspect the IDM.	Yes	Go to the next step.
	Is the IDM normal?	No	Repair or replace if necessary.
23	Inspect the EGR system operation. (See F2–232 EGR Control System Inspection.)	Yes	Remove and inspect the supply pump and the common rail.
	Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
24	Verify test results.If normal, return to the diagnostic index to serIf the malfunction remains, replace the PCM.	vice any add	itional symptoms.

NO.8 ENGINE RUNS ROUGH/ROLLING IDLE

	UNS ROUGH/ROLLING IDLE B6E4080188811
8	ENGINE RUNS ROUGH/ROLLING IDLE
DESCRIPTION	 The engine speed fluctuates between the specified idle speed and the lower speed and the engine shakes excessively. The idle speed is too slow and the engine shakes excessively.
POSSIBLE CAUSE	 Poor fuel quality Air leakage from intake-air system Intake-air system restriction Incorrect ide speed Engine overheating Cooling fan No. 1 system malfunction A/C system improper operation EGR water cooler malfunction Fuel leakage Inadequate fuel pressure Fuel pressure sensor or related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction (built-in common rail) Fuel filter clogging Fuel line restriction Incorrect fuel injection timing Erratic signal from CKP sensor Erratic signal from CKP sensor ECT sensor or related circuit malfunction Idle switch misadjustment Idle switch or related circuit malfunction Accelerator position sensor or related circuit malfunction MAF/IAT sensor malfunction Low engine compression Improper valve timing Englic complexion Englic compression excessive unbalance for each cylinder Unbalanced fuel injection amount for each cylinder Unbalanced fuel injection amount for each cylinder Unbalanced fuel injection amount for each cylinder IDM or related circuit malfunction Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: Fuel ine spills and leakage are dangerous. Fuel can ignite a

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	 Inspect for the following: Fuel quality (such as water contamination, winter/summer blend) Fuel line/fuel filter clogging Loose bands on intake-air system Cracks on intake-air system parts Intake-air system restriction Vacuum leakage Cooling fan No.1 system operation Are all items normal? 	Yes No	Go to the next step. Service if necessary Repeat Step 1.
2	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS—OVERHEATING."
		No	Go to the next step.
3	Connect the WDS or equivalent to the DLC-2. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
4	Note	Yes	Go to the next step.
	 The following test should be performed on the vehicles with A/C system. If the following test cannot be performed due to the engine stall, go to the next step. Go to the next step for the vehicle without A/C system. 	No	A/C is always on: Go to the symptom troubleshooting "NO.24 A/C ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". Other symptoms: Inspect for the following: • Refrigerant charging amount
	Connect the pressure gauge to the A/C line. Turn the blower and the A/C switches on. Is the pressure within specifications?		Cooling fan No.1 and/or cooling fan No.2 operation
5	Depress the accelerator pedal slightly.	Yes	Inspect the idle speed.
	Crank the engine. Does the engine start now?	No	Go to the next step.
6	Inspect the adjustment of the accelerator	Yes	Go to the next step.
	position sensor and idle switch. Are the accelerator position sensor and the idle switch adjusted correctly?	No	Adjust the accelerator position sensor and the idle switch correctly.
7	Inspect the fuel pipe for fuel leakage.	Yes	Repair or replace if necessary.
	Is any fuel leakage found on fuel pipe?	No	Go to the next step.
8	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
9	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.

F2

STEP	INSPECTION	RESULTS	ACTION
10	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
		No	Replace the malfunctioning parts.
11	Inspect the fuel pressure sensor.	Yes	Go to the next step.
	Is the fuel pressure normal?	No	Replace the common rail.
12	Inspect the suction control valve.	Yes	Go to the next step.
	Is the suction control valve normal?	No	Repair the supply pump.
13	Is the engine compression correct?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
14	Inspect the fuel injector.	Yes	Go to the next step.
	Is fuel injector normal?	No	Repair or replace if necessary.
15	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
16	Inspect the EGR water cooler for the following:	Yes	Go to the next step.
	 Coolant passage clogging/restriction Exhaust gas clogging/restriction Is the EGR water cooler normal? 	No	Service if necessary.
17	Inspect the IDM. Is the IDM normal?	Yes	Remove and inspect the supply pump and the common rail.
		No	Repair or replace if necessary.
18	Verify the test results.If normal, return to the diagnostic index to serIf the malfunction remains, replace the PCM.	vice any add	itional symptoms.

NO.10 LOW IDLE/STALLS DURING DECELERATION

B6E4080188811		
10	LOW IDLE/STALLS DURING DECELERATION	
DESCRIPTION	The engine stops unexpectedly at the beginning of deceleration or recovery from deceleration.	

10	LOW IDLE/STALLS DURING DECELERATION
POSSIBLE CAUSE	 Intake-air system restriction or clogging Poor fuel quality A/C system improper operation Inadequate fuel pressure Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction (built-in common rail) Fuel leakage Fuel line restriction or clogging Incorrect fuel injection timing Incorrect fuel injection timing Incorrect idle speed Erratic signal from CKP sensor Erratic signal from CKP sensor Supply pump malfunction Low engine compression Improper valve timing Glow system malfunction EGR system malfunction ECT sensor or related circuit malfunction Accelerator position sensor or related circuit malfunction Accelerator position sensor or related circuit malfunction Incorrect adjustment accelerator position sensor and/or idle switch IDM or related circuit malfunction Incorrect adjustment accelerator position sensor and/or idle switch IDM or related circuit malfunction Incorrect adjustment accelerator position sensor and/or idle switch IDM or related circuit malfunction Incorrect adjustment accelerator position sensor sensor

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine idle rough?	Yes	Go to the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE".
		No	Go to the next step.
2	Inspect for the following:	Yes	Go to the next step.
	 Fuel line/fuel filter clogging or restriction Intake-air system restriction or clogging Fuel quality (such as water contamination, winter/summer blend) Are all the items normal? 	No	Service if necessary. Repeat Step 2.
3	Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
4	Inspect the idle speed.	Yes	Go to the next step.
	Is the idle speed correct?	No	Repair or replace the malfunctioning part according to the idle speed inspection results.
5	Inspect adjustment of the accelerator position	Yes	Go to the next step.
	sensor and the idle switch. Are the accelerator position sensor and the idle switch adjusted correctly?	No	Adjust the accelerator position sensor and the idle switch correctly.
6	Measure the voltage PCM terminal 33 and 56.	Yes	Go to the next step.
	Is the voltage normal?	No	PCM terminal 33 does not specified: Inspect the clutch pedal position switch and the related wiring harness. PCM terminal 56 does not specified: Inspect the neutral switch and the related wiring harness.
7	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
8	Measure gap between CKP sensor and the	Yes	Go to the next step.
	pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is gap within specification?	No	Adjust the CKP sensor position.
9	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step. Replace the malfunctioning parts.
10	Inspect the fuel pressure sensor.	Yes	Go to the next step.
10	Is the fuel pressure normal?	No	Replace the common rail.
11	Inspect the suction control valve.	Yes	Go to the next step.
	Is the suction control valve normal?	No	Repair the supply pump.

STEP	INSPECTION	RESULTS	ACTION
12	Is the engine compression correct?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
13	Inspect the fuel injector.	Yes	Go to the next step.
	Is the fuel injector normal?	No	Repair or replace if necessary.
14	Note	Yes	Go to the next step.
	 The following test should be performed on the vehicles with A/C system. If the following test cannot be performed due to the engine stall, go to the next step. Go to the next step for the vehicle without A/C system. Connect the pressure gauge to the A/C line. Turn the blower and the A/C switches on. Is the pressure within the specifications? 	No	 A/C is always on: Go to the symptom troubleshooting "NO.24 A/C ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY". Other symptoms: Inspect the following: Refrigerant charging amount Cooling fan No.1 and/or cooling fan No.2 operation
15	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
16	Inspect the glow system operation. Is the glow system operation normal?	Yes	Go to the next step.
		No	Service if necessary.
17	Inspect the IDM. Is the IDM normal?	Yes	Remove and inspect the supply pump and the common rail.
		No	Repair or replace if necessary.
18	 Verify the test results. If normal, return to the diagnostic index to service any additional symptoms. If the malfunction remains, replace the PCM. 		

NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/LERK, HESITATION/STUMBLE B6E408018881106

11	ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES
DESCRIPTION	 The engine stops unexpectedly at the beginning of acceleration or during cruising. The engine stops unexpectedly while cruising. The engine speed fluctuates during acceleration or cruising. The engine misses during acceleration or cruising. The vehicle bucks/jerks during acceleration or deceleration. Momentary pause at the beginning of acceleration or during acceleration. Momentary minor irregularity in the engine output.

POSSIBLE CAUSE	 Poor fuel quality Glow system maifunction Air leaksen maifunction or clogging Engine overheating A/C system improper operation Turbocharger maifunction Variable swirt control (VSC) system malfunction EGR system maifunction Wariable swirt control (VSC) system maifunction EGR system maifunction Berger valve position sensor malfunction Fuel line clogging or restriction Inproper cooling fan No. 1 or cooling fan No.2 seat Fuel line clogging or restriction Incorrect fuel injection TKP sensor Erratic signal from CKP sensor Erratic signal from CXP sensor Erratic signal from CXP sensor Incorrect due injection timulfunction Accelerator position sensor or related circuit malfunction Accelerator position sensor or related circuit malfunction VSS or related circuit malfunction VSS or related circuit malfunction Incorrect idle speed Inadequate fuel pressure Fuel pressure sensor or related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction (built-in common rail) Supply pump malfunction Low engine compression Fuel injector malfunction Low engine compression Example compression Example system and/or catalyst converter restriction Clutch slippage IDM or related folowing warnings before performing the fuel system services: Fuel line snills and leakage are dangerous. Fuel can ignite and cause serious injury or death

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the idle speed stable?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE".
2	Is the engine overheating?	Yes	Go to symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS—OVERHEATING".
		No	Go to the next step.
3	Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
4	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as water contamination, winter/summer blend) Fuel line/fuel filter clogging and/or restriction Intake-air system restriction or clogging Exhaust system and/or catalyst converter restriction Cooling fan No.1 or cooling fan No.2 seat Are all the items normal? 	No	Service if necessary. Repeat Step 4.
5	Does the engine run normal after warm-up?	Yes	Inspect the glow system operation. Replace the any malfunctioning part if necessary. If the glow system is normal, go to the next step.
		No	Go to the next step.
6	Note	Yes	Go to the next step.
	 The following test should be performed on the vehicles with A/C system. If the following test cannot be performed due to the engine stalling, go to the next step. Go to next step for the vehicle without A/C system. Connect the pressure gauge to the A/C line. Turn the blower and the A/C switches on. Is the pressure within the specifications? 	No	 A/C is always on: Go to the symptom troubleshooting "NO.24 A/C ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUITY". Other symptoms: Inspect the following: Refrigerant charging amount Cooling fan No.1 and/or cooling fan No.2 operation
7	Inspect the hose bands between the following parts: • Turbocharger compressor housing and air	Yes	Retighten the hose bands. If the concern is resolved, complete the inspection. If the concern still exists, go to the next step.
	 cleaner Turbocharger compressor housing and charge air cooler Are the hose bands loose? 	No	Go to the next step.
8	Inspect for improper operation, kinks, clogging or disconnection on the guide blade actuator.	Yes	Turbocharger is normal. Go to the next step.
	Is the guide blade actuator normal?	No	Repair or replace if necessary. If the concern is resolved, complete the inspection. If the concern still exists, turbocharger is normal. Go to the next step.
9	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
10	Inspect the idle speed.	Yes	Go to the next step.
	Is the idle speed correct?	No	Repair or replace the malfunctioning part according to the idle speed inspection results.

RESULTS	ACTION
Yes	Go to the next step.
No	Adjust the accelerator position sensor and the idle switch correctly.
Yes	Go to the next step.
No	Adjust the neutral switch correctly.
Yes	Go to the next step.
No	Replace the malfunctioning parts.
Yes	Go to the next step.
No	Adjust the CKP sensor position.
Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
No	Replace the malfunctioning parts.
Yes	Go to the next step.
No	Replace the common rail.
Yes	Go to the next step.
No	Repair the supply pump.
Yes	Go to the next step.
No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
Yes	Go to the next step.
No	Repair or replace if necessary.
Yes	Go to the next step.
No	Repair or replace if necessary.
Yes	Inspect the following: • Clutch slippage • CKP sensor • VSS If normal, remove and inspect the supply pump and the common rail.
No	If the timing is incorrect, adjust the valve timing. If the timing belt is not normal, replace the timing belt.
rvice	No e any add

NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE

12	LACK/LOSS OF POWER-ACCELERATION CRUISE	
DESCRIPTION • Performance is poor under load (such as power down when climbing hills).		

12	LACK/LOSS OF POWER-ACCELERATION CRUISE
POSSIBLE CAUSE	 Poor fuel quality Air leakage from intake-air system Intake-air system restriction or clogging Engine overheating AC system improper operation Improper operation of A/C cut-off control Variable swirt control (VBC) system malfunction Variable swirt control (VBC) system malfunction EGR system malfunction EGR system malfunction EGR system malfunction Variable swirt control (VSC) system restriction Variable swirt control (VSC) system trestriction Variable swirt control (VSC) system restriction Vacuum leakage Clutch slippage Exhaust system and/or catalyst converter restriction Fuel line or clogging or restriction Fuel line or clogging or restriction Fuel line or clogging or restriction ECT sensor or related circuit malfunction Boost sensor or related circuit malfunction Accelerator position sensor or related circuit malfunction Ide switch or related circuit malfunction MAF/IAT sensor or related circuit malfunction IMAF/IAT sensor or related circuit malfunction Incorrect aljustment accelerator position sensor and/or idle switch Incorrect idle speed Inadequate fuel pressure Fuel pressure sensor or related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure sensor or related circuit malfunction Suction control valve malfunction (built-in supply pump) Fuel pressure limiter malfunction Low sensor influenction Low sensor influenction Low sensor control salve sensor Fuel pressure limiter malfunction Brake system dragging Intake shuter valve malfunction Brake system dragging Intake shuter valve malfunction Brake system dragging Intake shuter valve malfunction Brake system dragging <l< td=""></l<>

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the idle speed stable?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting "NO.8 ENGINE RUNS ROUGH/ROLLING IDLE".
2	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS—OVERHEATING".
		No	Go to the next step.
3	Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
4	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as water contamination, winter/summer blend) Fuel line/fuel filter clogging and/or restriction Intake-air system restriction Exhaust system and/or catalyst converter restriction Charge air cooler condition (restriction or damaged) Vacuum leakage Cooling fan No.1 and cooling fan No.2 seat Are all the items normal? 	No	Service if necessary. Repeat Step 4.
5	Inspect the intake shutter valve and VSC valve	Yes	Repair or replace if necessary.
	operations. Is there any problem?	No	Go to the next step.
6	Inspect the guide blade valve operation.	Yes	Repair or replace if necessary.
	Is there any problem?	No	Go to the next step.
7	Inspect the A/C cut-off operation.	Yes	Go to the next step.
	Does the A/C cut-off work properly?	No	Repair or replace the malfunctioning part according to the A/C cut-off system inspection results.
8	Inspect the hose bands between the following parts: • Turbocharger compressor housing and air	Yes	Retighten the hose bands. If the concern is resolved, complete the inspection. If the concern still exists, go to the next step.
	 cleaner Turbocharger compressor housing and charge air cooler Are hose bands loose? 	No	Go to the next step.
9	Inspect improper operation, kinks, clogging or disconnection on guide blade actuator. Is the actuator normal?	Yes	Go to the next step.
		No	Repair or replace if necessary. If the concern is resolved, complete the inspection. If the concern still exists, the turbocharger is normal. Go to the next step.
10	Remove the parts necessary to inspect the	Yes	Replace the turbocharger.
	turbocharger. Do not remove the turbocharger. Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with the housing on the vehicle. Is there any problem?	No	Go to the next step.
11	Inspect if the turbocharger compressor wheel	Yes	Replace the turbocharger.
	locknut is loose or has fallen into the turbocharger. Is there any problem?	No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
12	Inspect if the turbocharger compressor wheel by	Yes	Go to the next step.
	hand. Does the wheel turn easily and smoothly?	No	Replace the turbocharger.
13	Inspect if the turbocharger turbine wheel is	Yes	Replace the turbocharger.
	damaged, cracked or interfering with the housing on the vehicle.	No	Go to the next step.
	NoteInspect all the fins on each turbine wheel.		
	Is there any problem?		
14	Is any engine oil found inside the turbocharger turbine housing?	Yes	Excessive amount of oil is found: Replace the turbocharger. Small amount of oil is found: Wipe oil off vehicle, then go to the next step.
		No	Go to the next step.
15	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe oil off vehicle and install all the removed parts in Step 10. Then, go to the next step.
		No	Turbocharger is normal. Install all the removed parts in Step 10. Then, go to the next step.
16	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
17	Inspect the idle speed.	Yes	Go to the next step.
	Is the idle speed correct?	No	Repair or replace the malfunctioning part according to the idle speed inspection results.
18	Inspect adjustment of the accelerator position	Yes	Go to the next step.
	sensor and the idle switch. Are the accelerator position sensor and the idle switch adjusted correctly?	No	Adjust the accelerator position sensor and the idle switch correctly.
19	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
20	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
21	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • MAF • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
		No	Replace the malfunctioning parts.
22	Inspect the fuel pressure sensor.	Yes	Go to the next step.
	Is the fuel pressure normal?	No	Replace the common rail.
23	Inspect the suction control valve. Is the suction control valve normal?	Yes No	Go to the next step. Repair the supply pump.
24	Is the engine compression correct?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.

F2

STEP	INSPECTION	RESULTS	ACTION
25	Inspect the fuel injector.	Yes	Go to the next step.
	Is the fuel injector normal?	No	Repair or replace if necessary.
26	Inspect the IDM.	Yes	Go to the next step.
	Is the IDM normal?	No	Repair or replace if necessary.
27	 Inspect the timing belt for the following: Gear teeth chipping Low tension Breakage damage or cracks Is the timing belt normal? 	Yes	 Inspect following: Clutch slippage CKP sensor Boost sensor and related circuit Brake system for dragging If normal, remove and inspect the supply pump and the common rail.
		No	If the valve timing is incorrect, adjust the valve timing. If the timing belt is not normal, replace the timing belt.
28	Verify the test results.If normal, return to the diagnostic index to serIf the malfunction remains, replace the PCM.	vice any add	itional symptoms.

NO.13 KNOCKING/PINGING

13	KNOCKING/PINGING
DESCRIPTION	Excessive shrilly knocking sound from the engine
POSSIBLE CAUSE	 Poor fuel quality Air leakage from intake-air system Intake-air system restriction or clogging Variable swirl control (VSC) system malfunction Variable boost control (VSC) system malfunction Intake shutter valve stuck close VSC valve stuck close Glow system malfunction Low engine compression Improper valve timing Low coolant temperature Incorrect fuel injection timing Erratic signal from CKP sensor Prelated circuit malfunction MAF/IAT sensor or related circuit malfunction Boost sensor or related circuit malfunction Excessive fuel pressure Fuel return line clogging or restriction EGR system malfunction EGR system malfunction EGR valve position sensor malfunction EArage air cooler malfunction Suction control valve malfunction (built-in supply pump) Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. Fuel line spill

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Does the engine run cold?	Yes	Go to the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS—RUNS COLD".
		No	Go to the next step.
2	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as water contamination, winter/summer blend) Fuel return line clogging and/or restriction Intake-air system restriction or clogging Exhaust system and/or catalyst converter restriction or clogging Charge air cooler condition (restriction or damaged) Are all the items normal? 	No	Service if necessary. Repeat Step 2.
3	Connect the WDS or equivalent to the DLC-2.	Yes	Go to the next step.
	Access the ECT PID. Verify the ECT PID is above 80 °C {176 °F} ?	No	Inspect the ECT PID.
4	Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND No DTC is displayed: Co to the next date
	· · · · · · · · · · · · · · · · · · ·		Go to the next step.
5	Inspect the intake shutter valve and the VSC	Yes	Repair or replace if necessary.
	valve operations. Is there any problem?	No	Go to the next step.
6	Inspect the guide blade valve operation. Is there any problem?	Yes	Repair or replace if necessary.
		No	Go to the next step.
7	Inspect the hose bands between the following parts: • Turbocharger compressor housing and air	Yes	Retighten the hose bands. If the concern is resolved, complete the inspection. If the concern still exists, go to the next step.
	 cleaner Turbocharger compressor housing and charge air cooler Are the hose bands loose? 	No	Go to the next step.
8	Inspect for improper operation, kinks, clogging	Yes	Go to the next step.
	or disconnection on guide blade actuator. Is the actuator normal?	No	Repair or replace if necessary. If the concern is resolved, complete the inspection. If the concern still exists, the turbocharger is normal. Go to the next step.
9	Remove the parts necessary to inspect the	Yes	Replace the turbocharger.
	turbocharger. Do not remove the turbocharger. Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with the housing on the vehicle. Is there any problem?	No	Go to the next step.
10	Inspect if the turbocharger compressor wheel	Yes	Replace the turbocharger.
	locknut is loose or has fallen into the turbocharger. Is there any problem?	No	Go to the next step.
11	Inspect the turbocharger compressor wheel by	Yes	Go to the next step.
	hand.	No	Replace the turbocharger.

STEP	INSPECTION	RESULTS	ACTION
12	Inspect if the turbocharger turbine wheel is	Yes	Replace the turbocharger.
	damaged, cracked or interfering with the housing on the vehicle.	No	Go to the next step.
	Note Inspect all the fins on each turbine wheel. 		
	Is there any problem?		
13	Is any engine oil found inside the turbocharger turbine housing?	Yes	Excessive amount of oil is found: Replace the turbocharger. Small amount of oil is found: Wipe oil off the vehicle, then go to the next step.
		No	Go to the next step.
14	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe oil off vehicle and install all the removed parts in Step 10. Then, go to the next step.
		No	The turbocharger is normal. Install all the removed parts in Step 10. Then, go to the next step.
15	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2-232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
16	Inspect the glow system operation.	Yes	Go to the next step.
	Is the glow system operation normal?	No	Repair or replace the malfunctioning part according to the glow system operation results.
17	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
18	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
19	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • MAP • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
		No	Replace the malfunctioning parts.
20	Is the engine compression correct?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
21	Inspect the suction control valve. Is the suction control valve normal?	Yes	Inspect the following: • Boost sensor • MAF/IAT sensor • IAT sensor No.2 • Fuel pressure sensor • Accelerator position sensor
	1	No	Repair the supply pump.

NO.15 EMISSION COMPLIANCE

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Is the engine overheating?	Yes	Go to the symptom troubleshooting "NO.17 COOLING SYSTEM CONCERNS—OVERHEATING".
		No	Go to the next step.
2	Does the engine run cold?	Yes	Go to the symptom troubleshooting "NO.18 COOLING SYSTEM CONCERNS—RUNS COLD".
		No	Go to the next step.
3	Connect the WDS or equivalent to the DLC-2. Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between PCM control relay and PCM terminal 53 or 79 Open circuit PCM control relay and PCM terminal 69 PCM control relay stuck open Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection vehicle body GND
		No	No DTC is displayed: Go to the next step.
4	Inspect for the following:	Yes	Go to the next step.
	 Fuel quality (such as including water contamination, winter/summer blend) Fuel return line clogging and/or restriction Charge air cooler condition (restriction or damaged) Intake-air system restriction Exhaust system and/or catalyst converter restriction Vacuum leakage Are all the items normal? 	No	Service if necessary. Repeat Step 4.
5	Inspect the adjustment of the accelerator	Yes	Go to the next step.
	position sensor and the idle switch. Are the accelerator position sensor and the idle switch adjusted correctly?	No	Adjust the accelerator position sensor and the idle switch correctly.
6	Inspect the neutral switch adjustment.	Yes	Go to the next step.
	Is the neutral switch adjusted correctly?	No	Adjust the neutral switch correctly.
7	Inspect the intake shutter valve and the VSC	Yes	Repair or replace if necessary.
	valve operations. Is there any problem?	No	Go to the next step.
8	Inspect the guide blade valve operation.	Yes	Repair or replace if necessary.
	Is there any problem?	No	Go to the next step.
9	 Inspect the hose bands between following parts: Turbocharger compressor housing and air cleaner 	Yes	Retighten the hose bands. If the concern is resolved, complete the inspection. If the concern still exists, go to the next step.
	Turbocharger compressor housing and charge air cooler Are the hose bands loose?	No	Go to the next step.
10	Inspect for improper operation, kinks, clogging	Yes	Go to the next step.
	or disconnection on the guide blade actuator. Is the actuator normal?	No	Repair or replace if necessary. If the concern is resolved, complete the inspection. If the concern still exists, the turbocharger is normal. Go to the next step.
11	Remove the parts necessary to inspect the	Yes	Replace the turbocharger.
	turbocharger. Do not remove the turbocharger. Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with the housing on the vehicle. Is there any problem?	No	Go to the next step.
12	Inspect if the turbocharger compressor wheel	Yes	Replace the turbocharger.
	locknut is loose or has fallen into the turbocharger. Is there any problem?	No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
13	Inspect the turbocharger compressor wheel by	Yes	Go to the next step.
	hand. Does the wheel turn easily and smoothly?	No	Replace the turbocharger.
14	Inspect if the turbocharger turbine wheel is	Yes	Replace the turbocharger.
	damaged, cracked or interfering with the housing on vehicle.	No	Go to the next step.
	 Note Inspect all the fins on each turbine wheel. 		
45	Is there any problem?	X	-
15	Is any engine oil found inside the turbocharger turbine housing?	Yes	Excessive amount of oil is found: Replace the turbocharger. Small amount of oil is found: Wipe oil off vehicle, then go to the next step.
		No	Go to the next step.
16	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe oil off vehicle and install all the removed parts in Step 10. Then, go to the next step.
		No	The turbocharger is normal. Install all the parts removed in Step 10. Then, go to the next step.
17	Inspect the EGR system operation.	Yes	Go to the next step.
	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
18	Inspect the EGR water cooler for the following:	Yes	Go to the next step.
	 Coolant passage clogging/restriction Exhaust gas clogging/restriction Is the EGR water cooler normal? 	No	Service if necessary.
19	Inspect the glow system operation. Is the glow system operation normal?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the glow system operation results.
20	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
21	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
22	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • ECT • IAT • MAF • MAP • RPM • VSS If the PID value is not as specified, repair or replace the malfunctioning parts. If the PID value is normal, go to the next step.
		No	Replace the malfunctioning parts.
23	Inspect the fuel pressure sensor.	Yes	Go to the next step.
	Is the fuel pressure normal?	No	Replace the common rail.
24	Inspect the suction control valve. Is the suction control valve normal?	Yes	Go to the next step.
05		No	Repair the supply pump.
25	Is the engine compression correct?	Yes No	Go to the next step. Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.

F2

STEP	INSPECTION	RESULTS	ACTION
26	Inspect the fuel injector.	Yes	Go to the next step.
	Is the fuel injector normal?	No	Repair or replace if necessary.
27	Inspect the IDM.	Yes	Go to the next step.
	Is the IDM normal?	No	Repair or replace if necessary.
28	 Inspect the timing belt for followings: Gear teeth chipping Low tension Breakage damage or cracks Is the timing belt normal? 	Yes	Inspect the following: • ECT sensor • Boost sensor • MAF/IAT sensor • Catalyst converter If normal, remove and inspect the supply pump and the common rail.
		No	If the timing is incorrect, adjust the valve timing. If the timing belt is not normal, replace timing belt.
29	Verify the test results.If normal, return to the diagnostic index to serIf the malfunction remains, replace the PCM.	vice any add	itional symptoms.

NO.19 EXCESSIVE BLACK SMOKE

19	EXCESSIVE BLACK SMOKE
DESCRIPTION	Excessive black smoke is observed in exhaust gas.
POSSIBLE CAUSE	 Intake-air system clogging or restriction Air leakage from Intake-air system Incorrect fuel injection timing Erratic signal from CKP sensor Fuel pressure sensor or related circuit malfunction Boost sensor or related circuit malfunction IAT sensor No.2 or related circuit malfunction Excessive fuel pressure Suction control valve malfunction (built-in supply pump) Fuel line clogging or restriction Inder pressure limiter malfunction (built-in common rail) Low engine compression Improper valve timing Base engine malfunction Variable boost control (VBC) system malfunction Variable boost control (VBC) system malfunction Variable swith control (VSC) system malfunction Variable swith control (VSC) system malfunction VSC valve malfunction IDM or related circuit malfunction VSC valve malfunction Exchant system and/or catalyst converter restriction or clogging Warning The following troubleshooting flow chart contains the fuel system diagnosis and repair procedures. Read the following warnings before performing the fuel system services: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel. Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injury or death and damage. Fuel can is oritate skin and eyes. To prevent this, always complete "BEFORE REPAIR PROCEDURE" and "AFTER REPAIR PROCEDURE" described in this manual.

Diagnostic Procedure

STEP	INSPECTION	RESULTS	ACTION
1	Inspect for the following:	Yes	Go to the next step.
	 Intake-air system clogging or restriction Exhaust system and/or catalyst converter restriction or clogging Charge air cooler condition (restriction or damaged) Are all the items normal? 	No	Service if necessary. Repeat Step 1.
2	Perform the self-test function using the WDS or equivalent. Turn the engine switch to the ON position. Retrieve any DTC. Is the DTC displayed?	Yes	 DTC is displayed: Go to the appropriate DTC test. Communication error message is displayed: Inspect for the following: Open circuit between the PCM control relay and PCM terminal 53 or 79 Open circuit between the PCM control relay and PCM terminal 69 Stuck open PCM control relay Open or poor GND circuit (PCM terminal 65, 85, 103 or 104) Poor connection at vehicle body GND
		No	No DTC is displayed: Go to the next step.
3	Does any other symptom exist?	Yes	Go to the appropriate flowchart.
		No	Go to the next step.
4	Inspect the air cleaner element for clogging.	Yes	Go to the next step.
	Is the air cleaner element normal?	No	Repair or replace the air cleaner element.
5	Inspect the intake shutter valve and the VSC valve operations. Is there any problem?	Yes	Repair or replace if necessary.
		No	Go to the next step.
6	Inspect the guide blade valve operation. Is there any problem?	Yes	Repair or replace if necessary.
		No	Go to the next step.
7	Visually inspect the CKP sensor and the pulse	Yes	Go to the next step.
	wheel teeth. Are the CKP sensor and the pulse wheel teeth normal?	No	Replace the malfunctioning parts.
8	Measure the gap between the CKP sensor and	Yes	Go to the next step.
	the pulse wheel teeth. Specification 1.5—2.5 mm {0.059—0.098 in} Is the gap within the specification?	No	Adjust the CKP sensor position.
9	Visually inspect the CMP sensor and the pulse wheel teeth. Are the CMP sensor and the pulse wheel teeth normal?	Yes	Inspect the following PIDs: (See F2–31 PCM INSPECTION.) • IAT • MAP • RPM If the PID value is not as specified, repair or replace the malfunctioning parts. If PID value is normal, go to the next step. Replace the malfunctioning parts.
10	Inspect the EGR system operation.	Yes	Go to the next step.
10	(See F2–232 EGR Control System Inspection.) Is the EGR system operation normal?	No	Repair or replace the malfunctioning part according to the EGR control system inspection results.
11	Inspect the VSC system operation.	Yes	Go to the next step.
	Does the VSC system operate properly?	No	Repair or replace the malfunctioning part according to the VSC system operation inspection results.
12	Inspect the hose bands between the following parts: • Turbocharger compressor housing and air cleaner	Yes	Retighten the hose bands. If the concern is resolved, complete the inspection. If the concern still exists, go to the next step.
	 Turbocharger compressor housing and charge air cooler Are the hose bands loose? 	No	Go to the next step.

STEP	INSPECTION	RESULTS	ACTION
13	Inspect for improper operation, kinks, clogging	Yes	Go to the next step.
	or disconnection on guide blade actuator. Is the actuator normal?	No	Repair or replace if necessary. If the concern is resolved, complete the inspection. If the concern still exists, the turbocharger is normal. Go to the next step.
14	Remove the parts necessary to inspect the	Yes	Replace the turbocharger.
	turbocharger. Do not remove the turbocharger. Inspect if the turbocharger compressor wheel is bent, damaged, or interfering with housing on the vehicle. Is there any problem?	No	Go to the next step.
15	Inspect if the turbocharger compressor wheel	Yes	Replace the turbocharger.
	locknut is loose or has fallen into the turbocharger. Is there any problem?	No	Go to the next step.
16	Inspect if the turbocharger compressor wheel by	Yes	Go to the next step.
	hand. Does the wheel turn easily and smoothly?	No	Replace the turbocharger.
17	Inspect if the turbocharger turbine wheel is	Yes	Replace the turbocharger.
	damaged, cracked or interfering with the housing on the vehicle.	No	Go to the next step.
	Note Inspect all the fins on each turbine wheel. Is there any problem?		
18	Is any engine oil found inside the turbocharger compressor housing?	Yes	Wipe oil off vehicle and install all the removed parts in Step 15. Then, go to the next step.
		No	The turbocharger is normal. Install all the parts removed is Step 15. Then, go to the next step.
19	Inspect the suction control valve.	Yes	Go to the next step.
	Is the suction control valve normal?	No	Repair the supply pump.
20	Is the engine compression correct?	Yes	Go to the next step.
		No	Inspect for the following: • Damaged valve seat • Worn valve stem and valve guide • Worn or stuck piston ring • Worn piston, piston ring or cylinder • Improper valve timing Service if necessary.
21	Inspect the IDM.	Yes	Go to the next step.
	Is the IDM normal?	No	Repair or replace if necessary.
22	Inspect the fuel injector. Is the fuel injector normal?	Yes	Inspect following: • Boost sensor • Fuel pressure limiter (built-in common rail) • Fuel pressure sensor • Fuel return line restriction or clogging Service if necessary.
		No	Repair or replace if necessary.

If normal, return to the diagnostic index to set
If the malfunction remains, replace the PCM.

ENGINE CONTROL SYSTEM OPERATION INSPECTION

EGR Control System Inspection

- Perform the "Intake Shutter Valve Operation Inspection".
 Make sure that all the hoses are securely connected in the proper position.
- 3. Connect the WDS or equivalent to the DLC-2.

- 4. Turn the engine switch to the ON position.
 5. Access the EGRVP PID.
 6. Verify that the PID value is within specification.

- If not as specified, inspect the following.
 - EGR valve (stuck open)
 - EGR valve position sensor (See F2-37 EGR VALVE POSITION SENSOR INSPECTION.)

Specification: 0.4—0.6 V

- 7. Start the engine and run it at idle speed.
- 8. Verify that the EGRVP PID is within the specifications.
 If not as specified, inspect the following:
 - - EGR solenoid valve (vacuum)
 - EGR solenoid valve (vent)
 - EGR control solenoid valve
 - EGR valve position sensor (See F2-37 EGR VALVE POSITION SENSOR INSPECTION.)

Specification:

1.3—1.6 V

- 9. Disconnect the vacuum hose from the EGR valve.
- 10. Connect the vacuum pump to the EGR valve.
- 11. Apply vacuum to the EGR valve and inspect if the engine speed becomes unstable or the engine stalls.
 - If the engine speed does not change, stop the engine and inspect the EGR valve.
